Ph#: 313-312-4077

---

### Professional Summary:

- Over **5+ years** of experience as a **JAVA Full Stack Developer** in developing Web - Based enterprise applications using **Spring Framework 5.x/4.x** and **J2EE technologies**.
- Proficient in backend technologies including **Java (8/11/17)**, **Spring Boot** for scalable and efficient application development.
- Hands on Experience in developing web applications by using **spring framework** modules like **Spring IOC, Spring AOP, Spring MVC, Spring Security, Spring Boot, Spring Batch** and **Spring Data**.
- Experienced in **Object Relational Mapping (ORM)** using **Hibernate 4.x/3.x** and **Java Persistence API Standard (JPA)** for database mapping and data retrieval facilities.
- Extensive development experience with **IDEs** like **IDEA, Eclipse, RAD, spring tool suite** and **NetBeans**.
- Experienced in Designing and Development of the web pages using the **HTML5, CSS3, JSTL, JSF/Prime faces AJAX, JavaScript, DOJO, Spring Boot, Taglib, BOOTSTRAP, Node JS** and **JQuery**.
- Experience developing production **Node.js** applications with Express module.
- Experience in **XML** technologies such as **XSL, XSLT, XML schemas, XPath, XForms, XSL-FO** and **parsers** like **SAX, DOM**.
- Hands-on experience implementing **OAuth2, JWT, and Spring Security** for secure authentication and authorization.
- Skilled in cloud technologies, including **AWS, Google Cloud Platform (GCP)**, and Pivotal Cloud Foundry (PCF), optimizing cloud infrastructure for performance and scalability.
- Experience in **JMS** over messaging to exchange the information more reliably and asynchronously for enterprise applications using **Active MQ and Rabbit MQ**.
- Experienced in Core Java & J2EE design patterns like Front Controller, Singleton, Factory Pattern, Service Locator, Business Delegate, Data Access Object, Session Façade and Value object pattern.
- Experience with **AWS** cloud resources which includes launching, maintaining and troubleshooting **EC2 instances, S3 buckets, Auto Scaling, Dynamo DB, AWS IAM, Elastic Load Balancers (ELB) and Relational Database Services (RDS)**.
- Experience in deploying applications on Application and web servers likes **Web logic, Web Sphere, JBoss, Glassfish** and Web Servers like **Apache Tomcat**.
- Extensive experience in building micro-services architectures and integrating complex **RESTful and SOAP APIs**.
- Expertise in CI/CD pipeline setup using **Jenkins, GitLab**, and automated deployments for streamlined delivery.
- Experience with **JUnit, Mockito, and Log4j** in developing test cases and determining application functionality.
- Experience in developing and implementing Web Services using **REST, SOAP, and WSDL**.
- Experience with Relational databases like **MySQL, SQL server** and **NoSQL** database like **MongoDB**.
- Experience in DB Design, DB normalization and writing **SQL queries and PL/SQL- Stored Procedures, Functions, Triggers, Sequences, and Indexes and Views etc.**
- Experience in handling/executing projects using **agile methodologies (SCRUM)** along with **Test Driven Development (TDD)** techniques.
- Strong communication and analytical skills and a demonstrated ability to handle multiple tasks as well as work independently or in a team.

### Technical Skills:

|                               |                                                                                                                       |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>              | Java 17/11/8/7/6, PL/SQL                                                                                              |
| <b>Java/J2EE Technologies</b> | Java, JDBC, JNDI, JMS, JSTL, Java Beans, Apache-Kafka, RMI, Java Multithreading, Generics and Collections, EJB, Tiles |
| <b>Web Technologies</b>       | HTML5, XML, DOM, CSS3, JavaScript, XPath, AJAX, jQuery, Angular 14/12/10, Bootstrap, React.js, Redux                  |
| <b>Methodologies</b>          | Agile, Waterfall                                                                                                      |
| <b>Cloud/Tools</b>            | AWS, Azure, GCP, Docker, Kubernetes                                                                                   |
| <b>Frameworks</b>             | Spring, Spring Boot, Hibernate, MVC                                                                                   |
| <b>Design &amp; GUI Tools</b> | Eclipse, NetBeans, RAD                                                                                                |
| <b>App servers</b>            | IBM WebSphere, Apache Tomcat, BEA Web Logic, JBoss                                                                    |
| <b>Databases/Tools</b>        | Oracle, SQL Server, My-SQL, PL/SQL Developer                                                                          |

|                               |                      |
|-------------------------------|----------------------|
| <b>Design/Version Control</b> | GitHUB, GIT          |
| <b>Operating Systems</b>      | Windows, Linux, UNIX |

### Professional Experience:

**Client: Santander Bank, Boston, MA.**

**Duration: Jun 2024 – Till Date**

**Role: Full Stack Developer**

#### **Responsibilities:**

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, design, Analysis, Code development base and Testing.
- Migrated legacy applications to **Java 17** to benefit from improved performance and maintainability.
- Enhanced code security and maintainability using **Java 17** features like pattern matching, sealed classes.
- Worked on development and implementation of the **MVC** Architectural pattern using **Spring Framework**.
- Developed **Micro services** to provide **Rest API's** utilizing **Spring MVC**.
- Used **Spring Features** like **Spring MVC, Spring DAO, Spring Boot, Spring Batch, and Spring Security** for application access and authorization, **Spring Integration, Spring AOP** for crosscutting concerns.
- Used **Spring Boot** which is radically faster in building cloud **Micro Services** and develop spring based application with very less configuration.
- Worked extensively on **Spring Boot** for building **REST API's**.
- Used **Spring Boot** to create stand-alone spring applications.
- Created various **Spring Boot** and spring batch applications to connect them to various databases and created queries to retrieve data and modify the tables for the databases.
- Developed the persistence layer using **Hibernate Framework**, created the **POJO objects** and mapped using **Hibernate annotations**.
- Integrated and developed UI components with business components and developed web pages using **HTML5, CSS3, JQuery and JavaScript**.
- Implemented the service using **Node.JS** for performance, development, maintenance and deployment reasons.
- Utilized **Angular 14's TypeScript** support for type safety and development efficiency.
- Worked with **Eclipse IDE** to develop and deploy complete application and used **CVS** repository to maintain the source code.
- Created and managed **Docker** containers to ensure consistent development environments.
- Optimized **Kafka 2.7** Streams for high throughput and low latency in handling large-scale data streams.
- Used **JMS** to pass messages as payload to track statuses, milestones and states in the workflows.
- Used **XML (documents and transformations)** for creating templates with dynamic data from **XML file**.
- Designed, configured and deployed **Amazon Web Services (AWS)** for applications utilizing the **AWS stack (Including EC2, VPC, Glacier, Route53, S3, RDS, CloudWatch, CloudWatch Logs, Cloud Trial)** focusing on high-availability, fault tolerance, and auto-scaling.
- Created the **Docker containers** and **Docker consoles** for managing the application life cycle.
- Developed Application using **EJB** session beans.
- Used **Log4j** for logging the application log of the running system to trace the errors.
- Performed Unit Testing and developed Unit Test Classes using **JUNIT**.
- Used **Jenkins** for Continuous Integration and **Spring Tool Suite (STS) IDE** for application development.
- Involved in Design and Development of **RESTful API**. Worked with **SOAP UI, JAX-WS** to create Web Services and consuming the existing services.
- Created various **Mongo DB** collections and wrote services to store and retrieve user data from the application.
- JUnit is implemented along with **Mokito** to perform unit testing on our **RESTful** web application.
- Designed database and created tables, written the complex **SQL** Queries and **stored procedures** as per the requirements.
- Involved in development of **agile** methodology and tested the application in each iteration and made changes as required.
- Involved in Unit integration, bug fixing, acceptance testing with test cases, Code reviews.

**Environment:** Java 17, spring, Spring Boot, Hibernate, MVC, Micro Services, Kafka, Docker, RESTFul, HTML5, CSS3, JavaScript, Bootstrap, Angular 14, Node.JS, JMS, XML, AWS, Docker, EJB, Log4j, JUnit, Jenkins, SOAP, MongoDB, SQL, Agile and Windows.

**Client:** Encompass Health, Birmingham, AL.

**Duration:** Aug 2023 – May 2024

**Role:** Full Stack Developer

**Responsibilities:**

- Responsible for reviewing business user requirements and also participated in meeting the users with Business Analysts.
- Extensively used **Java 11** features (Lambda Expressions, Streams).
- Used **Java 11** Method References feature to point to methods by their names and also used functional Interfaces.
- Used **Spring MVC** framework at the Web tier level to isolate each layer of the application so that complexity of integration will be reduced and maintenance will be very easy.
- Used **Spring Framework** for dependency injection, integration of **Hibernate** using **Spring ORM** support, development of **RESTful** web services to give **JSON** output.
- Developed **Restful API** in **JAVA** on **Micro-services** Architecture using **Spring Boot**.
- Implemented **Micro Services** architecture using **Spring Boot** for making applications smaller and independent.
- Used **Spring Boot** for developing micro services and used **REST** to retrieve data from client-side using Micro service architecture.
- Developed Cloud Compatible **Micro Services** using **Spring Boot, java** and related web technologies
- Designed, developed and maintained the data layer using **Hibernate** and performed configuration of **Spring Application Framework**.
- Involved in creating and handling real time data streaming solutions and handling messaging services using **Apache Kafka**.
- Developed **Data Access Object (DAO)** persistence layer using **Hibernate**.
- Development of UI models using **Angular.JS, HTML5, JavaScript, AJAX, Web link** and **CSS3**.
- Created **Single Page Applications (SPA)** with **HTTP** requests using **Angular 12**.
- Used **Angular 12** HTTP Request to read data from the web services and process **JSON** data to render in the **UI**.
- Implemented **Angular.JS** as the framework to build a **single-page application (SPA)**.
- Worked with **Node.JS** framework including authoring complex directives, services, controllers and filters.
- Used **Eclipse** as the **IDE** and **Web Logic** as the application server.
- Extensively used **XML** documents with **XSLT** and **CSS** to translate the content into **HTML** to present to **GUI**.
- Used **JMS (Java Messaging Service)** for asynchronous communication between different modules.
- Worked on **AWS** Cloud platform and its features which includes **EC2, VPC, EBS, AMI, SNS, RDS, EBS, Cloud Watch, Cloud Trail, Cloud Formation AWS Config, Auto scaling, CloudFront, IAM** and **DynamoDB**. Designed, configured and deployed **Amazon Web Services (AWS)** for applications utilizing the **AWS stack**.
- Created **Docker images** from **Docker file** and handled multiple images by storing them in containers to deploy.
- To implement business logic created **EJB - stateless session beans, configured ejb-jar.xml**.
- Used **Log4J** for any logging purposes during the development of the application.
- Wrote **JUnit** test/Integration test cases for asserting functional quality.
- Involved in Continuous Integration and Continuous Deployment (CI/CD) using **Jenkins**.
- Worked in Service Oriented Architecture using Web Services- **SOAP and REST**.
- Worked with **NoSQL** database **MongoDB** and developed custom MongoDB applications specific to client needs and Developed **PL-SQL** store procedures to convert the data from **Oracle** to **MongoDB**.
- Used to write **SQL queries, Triggers, Functions** for **Oracle database** and developed some complex **SQL queries**.
- Worked in **Agile** environment with bi-weekly sprints and daily scrum meetings.
- Actively participated and provided feedback in a constructive and insightful manner during weekly Iterative review meetings to track the progress for each iterative cycle and figure out the issues.

**Environment:** Java 11, spring, Spring Boot, MVC, Micro Services, Hibernate, HTML5, CSS3, JavaScript, Bootstrap, Angular 12, Node.JS, JMS, XML, AWS, Docker, EJB, Log4j, JUnit, Jenkins, RESTful, SOAP, MongoDB, SQL, Agile and Windows.

**Company:** Thoughtworks Technologies (India) Pvt Ltd.,

**Duration:** Mar 2020 – Jul 2023

**Role:** Full Stack Developer

**Responsibilities:**

- Analyzed business requirements, participated in technical design, development and testing of various modules assigned.

- Worked on **Java 1.8** features such as Lambda expressions for making anonymous inline function calls by using Functional Interfaces which makes code readable and concise.
- Responsible for designing, coding and developed the application in **J2EE** using **spring MVC**.
- Configured **Spring MVC** from scratch using **XML** configurations, namespace handling, and **spring security** set up and giving access to resource, wrote code to transform XML documents using JAXB Marshalling and Unmarshalling using Spring Injections.
- Developed the result web data visualization service including time selected, vision selected, and user selected by using the **Spring Boot**.
- Used **Hibernate Relational mappings** (One-To-Many, Many-To-Many) and worked on **Hibernate Cache, Query, Criteria and Transactions**.
- Developed dynamic and responsive Web pages from scratch using **HTML5, CSS3** (using **SASS**) and **JavaScript**.
- Extensively worked in writing minimal code in building re-usable forms with their validations using **REACT** with **Redux** Architecture.
- Performed **Unit** testing on **ReactJS** applications using **Karma and Jasmine** tools and worked with the **Gulp** tool to build automation. Web pack module bundler and **Babel JavaScript** compiler are used accompanying **React JS**.
- Used **Node.JS** to run Web pack tasks and build properly the project.
- Wrote **EJB** Stateless session to communicate with Controller and Service layer i.e. make the **EJB** calls from Backing Beans.
- Used **Log4j** for logging errors, messages and performance logs.
- Performed unit testing with **JUnit**.
- Consumed **SOAP and REST** Web Services to retrieve the information from the back end.
- Wrote **SQL queries** and stored procedures to interact with the DB.
- Worked in **Agile** methodology and attended daily and weekly **SCRUM** meetings to update working status.
- Performed a thorough unit testing and resolved several data related issues before migration to production.

**Environment:** Java 8, spring, Spring Boot, MVC, Micro Services, Hibernate, HTML5, CSS3, JavaScript, Angular 6, Angular.JS, Node.JS, JMS, XML, EJB, Log4j, JUnit, SQL, Agile and Windows.
