PROFESSIONAL SUMMARY

Full Stack Java Developer with over 5 years of experience building and delivering robust, enterprise-grade web applications across telecom, banking, and financial consulting sectors. Adept at developing scalable backend services using Java, Spring Boot, and Hibernate, and building responsive front-end interfaces with React and TypeScript. Proven expertise in designing RESTful APIs, implementing secure authentication (OAuth2, JWT), managing CI/CD pipelines with Jenkins, and deploying containerized applications using Docker. Strong understanding of system integration, RBAC, document management systems, and microservice architecture. Committed to clean code practices, agile delivery, and cross-functional collaboration.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, Go, C++

Frontend: React.js, Redux, HTML5, CSS3, Bootstrap, Material UI

Backend & API: Spring Boot, FastAPI, Node.js, Express.js

Database & Caching: PostgreSQL, MongoDB, Redis, MySQL

Cloud & DevOps: Docker, Jenkins, Git, AWS (EC2, S3), GitHub Actions

Authentication: OAuth 2.0, JWT, Spring Security

Concepts: Microservices, REST APIs, Multithreading, CI/CD, Agile, MVC Architecture

Soft Skills: Problem Solving, Communication, Team Collaboration, Critical Thinking, Adaptability, Time Management, Ownership, Attention to Detail

PROFESSIONAL EXPERIENCE

Grant Thornton LLP – Oklahoma City, OK

Full Stack Java Developer | Sep 2024 – Present

- Led development of the Client Document Portal, enabling secure upload, categorization, and version control of financial statements using Spring Boot APIs and React UI.
- Delivered the Audit Checklist Automation module, transforming manual Excel workflows into dynamic, rulebased forms with validation and auto-saving.
- Designed and implemented RESTful microservices for Engagement Workflow Tracker, supporting real-time audit status updates and SLA-based notifications.
- Integrated Google OAuth and multi-factor authentication into the application's authentication layer to enhance security and meet SOC 2 compliance.
- Containerized application services using Docker and automated deployments through Jenkins CI/CD pipelines with environment-based configurations.
- Managed the User Role Matrix for RBAC, implementing scoped access for modules like Document Review, Workpaper Upload, and Task Assignment.

Grant Thornton LLP **Full Stack Java Developer Intern** | Feb 2024 – May 2024

- Built core features of the Workpaper Review module, including threaded comments, status flags (Reviewed/Finalized), and dynamic filters.
- Designed backend endpoints for the Document Versioning System, allowing users to track, rollback, and compare file versions with audit metadata.
- Created interactive widgets for the Audit Dashboard, visualizing progress, overdue items, and team performance using React and Chart.js.
- Implemented session-based security with JWT and Spring Security, handling role-based authorization and token refresh across services.
- Optimized PostgreSQL queries in the Engagement Filtering Tool, reducing dropdown load times by 60% for large datasets.

Mphasis Software Developer | *Jul 2020 – Nov 2022*

- Developed backend services for a banking client's loan management system using Java, Spring Boot, and Hibernate to support credit checks, EMI calculations, and status workflows.
- Implemented the Customer Document Upload module, integrating AWS S3 for file storage and adding validation for size/type constraints.
- Created and consumed REST APIs for Loan Disbursal Automation, reducing manual errors by integrating with third-party credit scoring systems.
- Designed custom exception handling middleware and logging with SLF4J/Logback, improving observability and debugging speed.
- Conducted API security audits and implemented JWT and HTTPS to meet internal data protection policies.

Tech Mahindra Junior Java Developer | *Jun 2019 – Jun 2020*

- Supported development of a telecom provisioning system, implementing REST APIs to activate/deactivate network services.
- Built Java-based services for SIM validation and activation workflows, integrating with external partner APIs and internal CRM.
- Contributed to the Customer Notification System, sending real-time SMS and email alerts on status updates using AWS SNS.
- Implemented backend logic to process queued service requests using scheduled tasks and handled retry logic with custom exception handlers.
- Assisted in writing and maintaining configuration files and deployment scripts using Maven and Jenkins for staging releases.
- Refactored legacy JSPs and Servlet code into modular MVC components to improve testability and structure.

PROJECTS

Husky Grades – *React, Spring Boot, PostgreSQL, Docker*

Built a student grade management platform for 150+ users with secure login, analytics dashboard, and admin controls. Designed REST APIs in Spring Boot and containerized components with Docker for consistent local testing.

Deep Note – *React, FastAPI, Python, TensorFlow, Librosa*

Created a music chord detection web app with deep learning. Trained a CNN on 310K+ audio samples using STFT and TensorFlow. Built a FastAPI backend for file uploads and real-time prediction.

Threadly – *Go, React, MongoDB, Redis, WebSockets*

Built a distributed chat platform with real-time messaging using WebSockets and Redis Pub/Sub. Added Google OAuth for secure user logins and used MongoDB for persistent chat history.

Multithreaded Network Packet Simulator – *C++*

Simulated packet routing over networks using multithreading. Used mutexes/semaphores for concurrency and analyzed latency across Time-Sensitive vs Best-Effort traffic types.

EDUCATION

Master of Science in Computer and Information Science

Southern Arkansas University, AR, USA — *Expected Aug 2024*

Bachelor of Engineering in Computer Science

Amity University, India — *May 2021*
