

Pavan Naga Sai Gullapalli

Java Full Stack Developer

+1 (763) 388-6134 | pavannagasaig1@gmail.com | Minneapolis 55436 USA | [LinkedIn](#)

SUMMARY

Java Full Stack Developer with expertise in designing, developing, and deploying scalable web applications. Hands-on experience in Java (Java 8/11/17), Spring Boot, React.js, Angular, and RESTful APIs with strong knowledge of microservices architecture. Skilled in SQL and NoSQL databases, CI/CD pipelines, containerization, and AWS cloud. Adept at Agile methodologies, collaborating with cross-functional teams, and delivering high-quality, maintainable software solutions.

TECHNICAL SKILLS

Programming Languages: Java (Java 8, Java 11, Java 17), .Net, TypeScript, JavaScript, SQL, Python, C++

Frontend Technologies: React.js, Redux, Angular, HTML, CSS, JSP, Bootstrap, Tailwind CSS, Next.js

Backend & Frameworks: Spring Boot, Spring Security, REST APIs, J2EE, Microservices, Hibernate, JPA, C#, Node.js, Express.js

Database & Data Handling: MySQL, MongoDB, Redis, PostgreSQL, JPA Repositories, Query Optimization

DevOps & CI/CD Tools: Jenkins, Docker, Kubernetes, Maven, Git, GitHub, GitLab, CI/CD Pipelines

Cloud & Messaging Systems: AWS (EC2, S3, RDS, Lambda, CloudWatch), Google Cloud

Authentication & Security: JWT, OAuth2, Role-Based Access Control, Spring Security

Agile & Collaboration Tools: Jira, Confluence, Agile Scrum, Sprint Planning, Code Reviews, Documentation

Testing Tools: JUnit, Mockito, Postman, Selenium, Cypress

Messaging & Streaming: Apache Kafka, RabbitMQ

PROFESSIONAL EXPERIENCE

Java Full Stack Developer, Wayfair, USA

Sep 2024 – Present

- Constructed robust cart management microservices using Java and Spring Boot, achieving 99.99% uptime and ensuring seamless shopping experiences across all Wayfair platforms.
- Built responsive, high-performance UIs with React.js, Redux, and Tailwind CSS, improving customer engagement and checkout efficiency.
- Pioneered the integration of MySQL and MongoDB, managing large-scale structured and unstructured data that accelerated query processing by 35% and enhanced overall system scalability.
- Implemented JWT authentication and role-based access control, strengthening security for both web and mobile applications.
- Maintained containerized microservices on AWS with Kubernetes and Docker, enhancing deployment reliability and cutting infrastructure issues by 25%.
- Configured Kafka partitioning and replication with Zookeeper, improving reliability and throughput by 30%.
- Actively contributed to Agile Scrum ceremonies, performed peer code reviews, mentored junior developers, and collaborated with cross-functional teams.
- Increased checkout speed by 20% as measured by transaction completion time, by optimizing API response with Redis caching and query tuning.
- Reduced production incidents by 30% as measured by monitoring dashboards, by implementing robust logging, alerting, and automated health checks with ELK Stack.
- Automated testing processes including unit, integration, and regression tests; improved code coverage to 90% and reduced QA efforts by 25%.

Java Full Stack Developer, Parallax Pros, India

Oct 2020 – Dec 2022

- Orchestrated the build of 12+ RESTful APIs using Java, Spring Boot, and Hibernate, enabling seamless data exchange between modules and supporting 5000+ users daily.
- Created reusable and dynamic UI components with Angular, TypeScript, and Bootstrap, improving usability and reducing overall load time.
- United MySQL and MongoDB databases achieving data persistence and simplified CRUD operations via JPA repositories, which reduced developer hours invested in database management by 8 hours weekly.
- Deployed Java-based applications on AWS EC2 instances, enabling high availability, scalability, and optimized resource utilization.
- Migrated applications from MT Docker to Kubernetes and optimized CI/CD pipelines using Jenkins and Docker, enabling image-level updates and reducing deployment time by 37% and rollback incidents by 12%.
- Implemented Spring Security and JWT for authentication and authorization, ensuring compliance with data protection policies.
- Improved system performance by tuning SQL queries, optimizing API responses, and reducing latency through caching strategies.
- Reduced page load time by 25% as measured by Lighthouse audits, by optimizing Angular components and leveraging lazy loading.
- Increased deployment efficiency by 40% as measured by release cycle duration, by streamlining Jenkins pipelines and automating regression tests.

EDUCATION

Masters in Computer Science, University of Central Missouri, Lee's Summit, MO

Jan 2023 – Aug 2024

Bachelors in Computer Science Engineering, NRI Institute of Technology, Andhra Pradesh, India

Jun 2018 – Apr 2022

PROJECTS

AI-Powered Customer Support Chatbot

- Designed and built an AI chatbot using Java Spring Boot and React, integrated with OpenAI API to provide natural language-based query handling.

Enterprise Employee Management Portal

- Developed a role-based web application using Java Spring Boot, Angular, and MySQL to manage employee data, leave requests, and performance testing.
