

EDUCATION

ST.FRANCIS COLLEGE, BROOKLYN, NEW YORK
MASTERS IN INFORMATION TECHNOLOGY MANAGEMENT
SEPT 2023- MAY 2025
3.89 GPA

MALLREDDY COLLEGE OF ENGINEERING, HYDERABAD, INDIA
COMPUTER SCIENCE ENGINEERING
AUG 2016- DECEMBER 2020
3.2 GPA

SKILLS SUMMARY

LANGUAGES: Python, SQL, JS, HTML, CSS, Terraform, C/C++

FRAMEWORKS: Panda, Numpy, PEGA, Streamlit

TOOLS: Excel, MySQL, Tableau, Power Bi, Google Data studio, ASANA, AWS, Okta, Ping Identity

PLATFORMS: PyCharm, Jupyter Notebook, Visual StudioCode, Okta, Microsoft Defender, Ping Identity, Duo Security, AWS IAM, AWS Config, AWS Security Hub, Sentinel One

SECURITY TOOLS: Wireshark, Snort, AWS Inspector, IDS, IPS, ServiceNow GRC, Splunk, Veeva Vault, Microsoft compliance manager

SOFT SKILLS: People Management, Excellent Communication, Rapport Building

WORK EXPERIENCE

SYSKES BUSINESS SERVICES INDIA PVT. LTD. , JUNIOR OPERATIONS ANALYST, HYD, INDIA
MARCH 2021- FEB 2023

- Track real-time case statuses to ensure service level agreements are being met. Document process flow patterns and maintain standard operating procedures.
- Implemented AWS Security best practices cross EC2, S3, RDS and IAM to ensure compliance with internal data governance standards.
- Identify data mismatches or inconsistencies and collaborate with relevant teams to fix data integrity issues.
- Run queries and extract data and compare data across multiple databases. Perform data cleaning and validation, ensuring final reports are correct.
- Ensured compliance with EU- MDR and FDA- 21 CFR Part 820 by supporting technical file documentation, risk management processes, and validation protocols in product development life cycle.
- Supported implementation of HIPAA compliance by enforcing access controls encryption protocols and secure data transmission for systems handling Protected Health Information(PHI).
- Deployed Terraform and AWS config rules to enforce security baselines and detect drift in infrastructure compliance.
- Investigate process related issues using logs and error reports from PEGA. Use Python scripts to parse large datasets and system logs, and isolating recurring patterns.
- Identify and report any process risks or compliance gaps within day-to day activities.
- Participated in Data Mapping exercises privacy audits and DPIAs(Data Protection Impact Assessments) to align with GDPR requirements.
- Managed AWS Identity and Access Management(IAM) policies, roles, and permissions to enforce least privilege access, secure cross- account roles, and integrate with corporate SSO/IDP solutions- ensuring secure and compliant user access to cloud resources.
- Deployed, monitored and maintained IDS/IPS systems to detect and prevent malicious activities across networks and endpoints.
- Designed and enforced multi account security architecture using AWS organizations SCP's and consolidated billing.
- Assist in developing mitigation strategies, such as introducing fail- safe or backup procedures in PEGA workflows.
- Work cross- functionally with teams such as Customer Support, Finance, Marketing and IT to gather requirements.
- Monitor data ingestion processes from different source systems into operational data store or reporting warehouse.
- Delivered exceptional customer service by promptly addressing client security concerns, explaining technical issues in accessible terms, and ensuring timely resolution of compliance and vulnerability remediation requests - enhancing customer trust and satisfaction.

ACCENTURE INDIA PVT. LTD., OPERATIONS ANALYST
FEB 2023- AUG 2023

- Acquired stakeholder requests for process improvement after doing an analysis of company processes.
- Pega workflows were configured and put into use to automate operational procedures.
- Contributed to achieving/maintaining ISO 27001 certification by assisting in ISMS Implementation.
- Documented security controls and supported continuous improvement through gap assessments and risk treatment plans.
- Created automated response policies to quarantine compromised devices or block malicious IP addresses in real time.
- Configured firewall rules and ACL's for data centers cloud VPC's to restrict inbound and outbound traffic based on security zones
- Utilized NMAP and Wireshark for periodic scanning and packet inspection to identify rogue devices and detect anomalies

- Using the Pega platform, business rules and decision logic were created and maintained.
 - Pega-based solutions were designed, integrated, and tested in conjunction with cross-functional teams.
 - Carried out user acceptability and unit testing to guarantee the effectiveness and functionality of Pega apps.
 - Managed SSO integration and user life cycle automation using SCIM provisioning via Okta for workforce identity control.
 - Integrated MFA enforcement policies for privileged users and third party vendors sing Duo Security.
 - Provide troubleshooting and technical help for Pega configuration-related difficulties.
 - System settings, process modifications, and best practices for ongoing development were documented.
 - Tracked key performance metrics by creating reports and keeping an eye on system performance.
-

PROJECTS

Prediction models for estimation of Survival Rate and Relapse of Breast Cancer using Machine Learning Methods

In order to calculate the chances of recurrence and breast cancer survival, this team created machine learning prediction models. In order to create models like logistic regression and random forests, the team processed clinical and treatment data using Java programming and a variety of machine learning tools. Metrics like accuracy and AUC-ROC were used to assess the study, which found important prognostic indicators and showed how data-driven methods may be used to guide individualized treatment plans.

Analysis of data using Machine Learning Approaches in Social Media Networks

In order to identify trends and patterns in online interactions, this research used machine learning techniques to evaluate data from social media networks. The project includes data preparation, feature extraction, and the use of techniques like clustering and classification, with Java serving as the main programming language and a number of machine learning libraries. In order to extract useful insights, the study sought to classify user activity, identify new themes, and conduct sentiment analysis. All things considered, the study showed how machine learning can be used to turn unprocessed social media data into useful knowledge for strategic decision-making in fields like public opinion research and marketing.
