EDUCATION

Northwest Florida State College

Associates of Arts, Computer Science

Expected 2025

GPA: 3.82

- President's List.
- Transferring to a 4 year college after acquiring AA.

TECHNICAL SKILLS

Languages: Python, SQL, C++, HTML/CSS

Developer Tools: PyCharm, Jupyter Notebook, Visual Studio Code, Github, Excel

PROJECTS

Password Security Checker | *Python*

- Designed a script that checks if passwords have been exposed in data breaches using the “**Have I Been Pwned**” API.
- Secured password privacy by implementing partial hash queries to ensure sensitive data is not exposed.
- Utilized **SHA-1 hashing** and integrated logic to compare hashed values against breach databases

Blackjack Game | *Python*

- Developed a text-based Blackjack game in Python, implementing a dynamic game loop with features for hitting, staying, and checking hand totals.
- Managed deck creation, card dealing, and ace logic to ensure correct score calculations.

Credit Card Validator | *C++*

- Developed a program in C++ to validate credit card numbers using the Luhn algorithm.
- Processed card numbers by summing digits in alternating positions and checked divisibility to determine validity.
- Demonstrated proficiency in control structures, string manipulation, and algorithm implementation.

TECHNICAL EXPERIENCE

Algorithmic Trading Intern (Data Analytics)

February 2025 - June 2025

FinSentinel

Remote

- Designed and tested a crypto trading system across BTC and ETH using multiple strategies and smart rebalancing rules, reaching up to **18.7% yearly returns** and a **1.9 Sharpe ratio**, with realistic trading fees and price slippage factored in.
- Added safety features like a **-25%** max loss limit and trade volume controls, and built a trade simulator that handled over 3,000 orders with an average **92.5%** fill rate, using realistic delays and partial fills.
