

Pedapati Subhakar

+1 4146291317 | abc@gmail.com | Wisconsin , United States

Professional Summary

Experienced Clinical Informatics and Population Health Analyst with a strong background in EHR optimization (EPIC, VistA), clinical documentation improvement, and health data analytics. Proven ability to bridge clinical and technical domains, supporting value-based care through accurate coding, compliance with HEDIS, ICD-10, HL7, and FHIR standards, and predictive modeling using Python and R. Skilled in automating ETL workflows, developing actionable visualizations with Tableau/Power BI, and leveraging geospatial and SDOH data to drive equitable health outcomes. Committed to advancing healthcare delivery through data-driven decision-making, provider collaboration, and population-level insights.

Skills

- | | | |
|--|---|--|
| • Data Analysis & Interpretation | • Population Health Management & Analytics | • Healthcare Metrics & Standards (HEDIS, ICD-10, CPT, HL7, FHIR) |
| • Data Visualization & Reporting (Tableau, Power BI) | • Programming (Python/R/SAS) | • Data Governance & Compliance (HIPAA, GDPR, PHI Security) |
| • EPIC EHR System | • FHIR (Fast Healthcare Interoperability Resources) | • ETL Process Automation (Python scripts, custom workflows) |
| • Machine Learning for Risk Stratification | • HL7 Standards | • Statistical Modeling & Predictive Analytics |

Experience

- | | |
|--|-------------------------|
| Healthcare Data Analyst
Froedtert Health, Wisconsin, United States | November 2024 - Current |
| • Performed data analysis and interpretation, using SQL, Python, and R to extract, clean, and analyze population health datasets for actionable insights. | |
| • Managed and optimized databases, ensuring efficient data storage, retrieval, and processing to support population health initiatives. | |
| • Developed data visualizations and reports using Tableau and Power BI, presenting key health trends and performance metrics to stakeholders. | |
| • Ensured compliance with healthcare standards, aligning data analysis processes with HEDIS, ICD-10, CPT, HL7, and FHIR requirements for accurate reporting. | |
| • Utilized machine learning and AI tools to support risk stratification and predictive modeling for population health management. | |
| • Collaborated with healthcare teams, including clinicians and administrators, to develop data-driven strategies that enhance patient outcomes and resource allocation. | |
| • Contributed to business intelligence initiatives, providing data-driven insights that support strategic planning and policymaking in population health programs. | |
| • Integrated and maintained ETL processes, automating data extraction, transformation, and loading from multiple healthcare data sources, including EHRs, insurance claims, and public health databases, to improve data accessibility and efficiency. | |
| • Conducted geospatial and social determinants of health (SDOH) analysis, leveraging GIS tools and demographic data to identify | |

health disparities, improve resource allocation, and support targeted intervention programs.

Clinical Informatics Specialist

July 2020 - June 2023

Evolent Health International, India , India

- Reviewed inpatient medical records to ensure accurate representation of patient severity, diagnoses, complications, and clinical indicators, supporting coding accuracy and regulatory compliance.
- Collaborated with clinical providers to enhance documentation practices through provider education, documentation queries, and CDI (Clinical Documentation Improvement) feedback.
- Observed and documented real-time patient encounters as a Clinical Informatics Specialist, capturing structured SOAP notes, HPI, assessments, ICD-10 and CPT codes, and care plans during clinical visits.
- Utilized and supported EHR systems (EPIC, Vista, Open Vista) to implement functionality improvements, maintain clinical templates, troubleshoot user issues, and ensure smooth data integration across care settings.
- Conducted training and onboarding sessions for clinical staff and providers on EHR functionalities, clinical documentation standards, and HIPAA-compliant data handling practices.
- Participated in daily huddles and weekly mortality reviews, identifying documentation gaps and care coordination issues, while supporting clinical decision-making.
- Performed structured chart audits and documentation quality reviews, ensuring clinical documentation met both internal standards and external regulatory requirements.
- Served as a liaison between IT and clinical departments, translating clinical workflows into EMR optimization strategies, and recommending customizations to improve user experience and patient safety.
- Supported value-based care documentation, helping close care gaps through accurate chronic disease coding, population health insights, and data-driven documentation strategies.
- Maintained compliance with healthcare policies by participating in system testing, conducting risk assessments, and applying documentation standards to support operational excellence and patient-centered care.

Education

Master of Science (M.S.): Healthcare Informatics - University of Wisconsin-Milwaukee, Wisconsin

December 2024
