

Phaninder Reddy Konni

Data Engineer

phaninderkonni@gmail.com | +1 (940) 843-1435 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

- Around 3 years of experience in all phases of Software Application development and maintenance of **Hadoop/Big Data** applications, with expertise in Hadoop architecture and ecosystem including **HDFS, MapReduce, Pig, Hive, Sqoop, Flume, and Oozie**.
- Skilled in installation, configuration, and management of Hadoop clusters using Apache Hadoop, **Cloudera**, Hortonworks, and various cloud services such as **AWS** and **GCP**.
- Proficient in data migration using **Python** and **Snow SQL**, and building Docker Images to run Airflow for testing ingestion and **ETL** pipelines.
- Developed Spark applications using **Spark-SQL** in Databricks for data extraction, transformation, and aggregation from multiple file formats for analysis.
- Experienced in writing and implementing complex test plans, and developing automation scripts using TDD, BDD, and ATDD approaches with tools like **Selenium** and **Cucumber**.
- Knowledgeable in **Apache Kafka** and **Apache Storm** for building data platforms and pipelines, and experienced with search technologies like Elasticsearch.
- Proficient in Data Marts, OLAP, Dimensional Data Modeling using **Ralph Kimball** Methodology, and database design with complex SQL queries and stored procedures.
- Skilled in writing custom Kafka consumer code and modifying producer code in **Python**, and developing Python modules for data manipulation in MySQL databases.
- Extensive experience in **Spark, HiveQL, SQL**, and writing User Defined Functions (UDFs) in Hive and Spark.
- Used **ELK** stack (Elasticsearch, Logstash, Kibana) for search, logging, and monitoring, and responsible for designing and deploying new ELK clusters.
- Worked with AWS Cloud services including API Gateway, Lambda, S3, IAM, and EC2, and used AWS SDKs for service interaction.
- Experienced in system analysis, E-R/Dimensional Data Modeling, and implementing RDBMS features, as well as monitoring Hadoop clusters with Cloudera Manager and Web UI.
- Worked extensively with semi-structured data for data sanitation and report generation, and used ELK stack for end-to-end system logging and monitoring.

TECHNICAL SKILLS:

Cloud Environment	Amazon Web Services (AWS), Azure, Google Cloud Platform (GCP)
Platforms	C, C++, Java/J2EE, Go Lang
Scripting	Shell, Python, Power Shell, YAML, Groovy, Bash
Web Technologies/Frameworks	HTML, JSP, JSTL, JavaScript, CSS, Servlets
Version Control Tools	SVN (Subversion), GIT, GitLab, GitHub, Bitbucket
Build Tools	Ant, Maven
Configuration Management	Chef, Puppet, Ansible, Terraform
Continuous Integration Tools	Jenkins, UDeploy
containerization Tools:	Docker, Docker Swarm, Kubernetes, AWS ECS, OpenShift
Monitoring Tools	Nagios, Splunk, Cloud Watch, ELK Stack
Methodologies	Agile, Scrum, Waterfall
Operating Systems	Unix/Linux (Red Hat, CentOS, SUSE), Ubuntu, Windows.
Databases	Oracle, MS SQL Server, MySQL, Dynamo DB, Mongo DB, NoSQL, PostgreSQL
Virtualization	Virtual Box, VMWare
Ticketing Tools	JIRA and Confluence

WORK EXPERIENCE:

Lowes, Charlotte, NC
Data Engineer

Jan 2025– Present

Responsibilities:

- Extracted, cleansed and transformed data using Databricks and Spark data analysis. Worked thoroughly in Data transformations, Mapping, Cleansing, Monitoring, Debugging, performance tuning and troubleshooting Hadoop clusters.
- Worked in the data science team preprocessing and feature engineering and assisted **Machine Learning algorithm** running in production.
- Designed and implemented test environment on **AWS**, Registered datasets to AWS Glue through **Rest API**.
- Automating the data flow using Control-M, Model, lift and shift custom **SQL** and transpose Look ML into dbt for materializing incremental views.
- Used **AWS** API Gateway to Trigger Lambda functions. Wrote Spark applications for data validation, cleansing, transformation, and custom aggregation.
- Integrator and developed **PySpark** application as ETL tool. Used **DynamoDB** to store metadata and logs.
- Queried with Athena on data residing in AWS S3 bucket.
- Implemented **AWS EMR** Spark using PySpark & utilized **Data Frames** and **Spark SQL** API for faster data processing.
- Design and engineer **REST** APIs and/or packages that abstract feature extraction and complex prediction/forecasting algorithms on time series data, **AWS** Step function used to run a data pipeline.
- Monitored and managed services with **AWS** CloudWatch Loaded the tables from the azure data lake to **azure** blob storage for pushing them to **snowflake**
- Wrote **ETL** jobs to read from web APIs using **REST** and **HTTP** calls and loaded into HDFS using java and Talend.
- Used Talend **bigdata** components like **Hadoop** and S3 Buckets and AWS Services for redshift.
- Validating the data from **SQL** Server to Snowflake to make sure it has Apple to Apple match.
- Consulting on Snowflake Data Platform Solution **Architecture**, Design, Development and deployment focused to bring the data driven culture across the enterprises
- Used Dremio in **AWS** as Query engine for faster Joins and complex queries over **AWS S3** bucket.
- Performed transformations using Apache **SparkSQL**. Utilized Different VM for Development and Production environment.
- Designed and Developed **ETL** Processes in **AWS Glue** to migrate Campaign data from external sources like S3, ORC/Parquet/Text Files into AWS Redshift.
- Created Rest API using Flask in **Python** Lessened access time by data model refactoring, query optimization and implemented Redis cache to support **Snowflake**.
- Working knowledge of Control-M scheduler for running **ETL** flows.
- Experienced in Automating, Configuring and deploying instances on **AWS** environments and Data centers, also familiar with **EC2**, Cloud watch, **Cloud Formation** and managing security groups on AWS.
- Built interactive **Power BI** dashboards and worked on reporting analytics, extensively used Databricks notebooks for interactive analytics using Spark APIs.
- Used **Pandas API** to put the data as time series and tabular format for easy timestamp data manipulation and retrieval.
- Supported analytical platform, handled data quality, and improved the performance using Scala's higher order functions, **lambda** expressions, pattern matching and collections.
- Implemented scalable microservices to handle concurrency and high traffic. Optimized existing **Scala code** and improved the cluster performance.
- Involved in building an Enterprise **Data Lake** using Data Factory and Blob storage, enabling other teams to work with more complex scenarios and ML solutions.

Environment: AWS, API Gateway, Lambda, PySpark, ETL Tool, DynamoDB, AWS EMR, AWS S3, ORC, Parquet, Text, Files, AWS Redshift, Rest API, Flask, Databricks notebooks, Spark APIs.

Responsibilities:

- Gathered and consolidated data from various sources, such as policy databases, customer information systems, claims systems, and external data sources, ensuring data integrity and accuracy and worked with disparate data sources to prepare data for reporting or analytical modeling.
- Managed and optimized data storage on **Azure** Blob Storage and **Azure** Data Lake Storage.
- Implemented data tiering strategies to balance performance and cost efficiency.
- Collected data from various sources such as databases, APIs, and spreadsheets and analyzed data for calibration, trends, patterns, and outliers; using graphical and statistical Analysis.
- Designed and orchestrated complex **ETL** workflows using **Azure Data Factory** to efficiently extract, transform, and load data from diverse sources into data warehouses. Leveraged data flow transformations and **Azure Integration** Runtimes for seamless data movement.
- Integrated real-time data streams from **IoT** devices and sensors using **Azure Stream** Analytics. Designed event-driven architectures to process streaming data and trigger alerts for immediate actions.
- Performed exploratory **data analysis (EDA)** to identify patterns, trends, and insights and used statistical and visualization techniques to understand the data and extract meaningful information.
- Applied Azure Databricks for advanced data processing, utilizing **PySpark** to preprocess and transform raw data before loading into data repositories. Collaborated with data scientists to build and deploy machine learning models.
- Worked with the Developers providing technical knowledge and support throughout the project lifecycle.
- Created **Power BI** Reports using the Tabular **SSAS** models as source data in Power BI desktop and publish reports to service.
- Designed Reports such as periodic reports on performance metrics, **KPIs**, and other key data points.
- Developed complex **SQL** queries using stored procedures, **common table expressions (CTE)**, temporary table to support **SSRS** reports.
- Conducted analysis of key business drivers, trends, and performance indicators to provide value-added inputs.
- Executed **SQL** Queries to retrieve data using Joins, Inner Join, Views, Where, Order BY and Sub-Queries to conduct backend data analysis.
- Worked throughout the **SDLC** for a detailed understanding of requirements, processes, and deployment.
- Analyzed and monitored credit card applications and reported possible risks to the management and ensured compliance.
- Participated in Use case Reviews, Test case Reviews, Test scenario Reviews and created synchronization points for validation and verification.

Environment: Azure Blob storage, Azure Databricks, SQL, Tableau, Microsoft BI Stack (SSRS, SSAS, SSIS), Talend, Informatica, Python, Excel, Confluence, Power BI, Tableau.

EDUCATION:

- Bachelors in Electronics and communication engineering at TKR College of Engineering and Technology, India.
- Master's in advanced data analytics at University of North Texas.
