

POOJA BAJAGAIN, MS

Bajagainpooja17@gmail.com — +1-913-343-8871 — [linkedin.com/in/bpooja17](https://www.linkedin.com/in/bpooja17) — Newark, DE

OBJECTIVE

Self-motivated and detail-oriented Computer Science graduate with a strong foundation in programming (Python, Java, C/C++), cloud technologies, and AI/ML model development. Experienced in applying machine learning, deep learning, and statistical methods to solve complex data-driven problems in cloud computing and large-scale distributed systems. Skilled in model optimization, scalable cloud deployment, and collaborative AI research. Passionate about building innovative, efficient, and real-world AI-powered solutions.

EDUCATION

Avila University

MS in Computer Science

Missouri, USA

August 2022 - August 2025

Pokhara University

BS in Computer Engineering

Pokhara, Nepal

August 2017 - August 2022

SKILLS

Programming Language

: Python, Java, C/C++, MATLAB

Web Stack

: HTML, CSS, JavaScript, ReactJS

Tools Technologies

: Git/ Github , VS Code ,Andaconda, Power BI, Tableau, OpenCV

APIs

: SOAP, REST API Integration

Cloud and Big Data Technologies

: AWS, Hadoop, Docker, Jenkins, Kubernetes

Database Management

: MySQL, MongoDB, SQL, PostgreSQL

CERTIFICATES

- AWS Certified Cloud Practitioner.
- Oracle Cloud Infrastructure Foundation Associate
- Generative AI Fundamentals
- Advanced Learning Algorithms

PROJECTS

Cloud Computing and Data Engineering on AWS. Built a cloud-based data solution using AWS S3, Glue, Athena, and EC2 with Spark-based ETL for cleaning and storing datasets for ML and Power BI. Configured CI/CD pipelines and monitoring via CodePipeline, Nagios XI, and CloudWatch for scalable, real-time performance tracking.

Develop a Student Attendance System using Facial Recognition. This project was developed using Python. Tinker is used to design interfaces, and MySQL is used to store data. Trained the model with the human face datasets using OpenCV and LBH algorithm.

OCR Android Application is an Android Mobile Application that extracts text from the file and stores it in a .txt file.

Monitored EC2 instances, Domains, and Websites with Nagios XI. Installed Nagios XI in EC2 instances and monitored EC2, domain, and website using URLs.

Implemented CI/CD on AWS using CodePipelines. Created repository using CodeCommit, generated credentials for git access, pushed code to the repository, set up code pipeline, installed code deploy agent in the EC2 instance, used S3 as code storage and pipeline, built and deployed code at each commit.
