Sunnyvale, CA | +1-669-666-7361 | poojithashetty8@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Software Engineer with 5+ years of experience building secure, cloud-native systems. Proficient in Java for developing scalable APIs and automated CI/CD pipelines. Experienced with container orchestration and cloud platforms to ensure robust performance and security. Committed to collaborating with cross-functional teams to deliver practical, high-impact solutions in healthcare and critical data processing.

Skills

- **Programming Languages:** Java, SQL, Python, PL/SQL, JavaScript, TypeScript, Golang
- **Web & API Technologies:** GraphQL, Angular6/7, Node JS, ReactJS, HTML5, CSS3, Spring Boot, Spring MVC, Hibernate
- **Databases:** MySQL, SQL, MongoDB, Oracle
- **Frameworks & Tools:** Finacle, Tivoli, Angular, Node.js, React.js, Grafana
- **Banking & Customization:** Finacle Core Banking Customization, PL/SQL Scripting, Tivoli Batch Job Optimization
- **Operating Systems & Servers:** Unix, Linux, Windows, Apache Tomcat, Eclipse
- **Version Control & CI/CD:** Git, GitHub, SVN, Bitbucket, Jenkins
- **Computer Science Fundamentals:** Algorithm Design, Data Structures
- **Cloud & Container Technologies:** Kubernetes, Cloud Platforms

Work Experience

Walmart

Apr 2025 - Present

Java Backend developer

Sunnyvale, CA

- Designed and developed **microservices using Spring Boot to handle large-scale image and video uploads**, ensuring secure, high-availability media ingestion. Integrated Kafka for asynchronous processing, enabling reliable handling of high-volume upload events without impacting performance.
- Developed and maintained backend services using **Java, Spring Boot, and GraphQL**, incorporating secure and scalable design principles and leveraging containerized deployments with Kubernetes.
- Designed and implemented **GraphQL schemas, queries, and resolvers, enabling seamless** data communication in distributed systems while adhering to secure coding practices.
- Worked hands-on with cloud platforms including **Microsoft Azure and Google Cloud Platform (GCP)**, utilizing their services for application deployment, scaling, and resource management.
- Created and deployed new **API endpoints in offsite services and BFF layers**, supporting real-time data needs and enhancing system scalability with cloud platform expertise.
- Built pre-processing pipelines that analyzed uploaded images and videos to detect clarity issues, identify fake or manipulated media, and flag fraudulent user activity. This reduced fraudulent submissions by over 28% and improved trust and safety in the platform.
- Integrated **BFF APIs into internal monitoring** tools to ensure high reliability and performance in mission-critical distributed systems.
- Collaborated with cross-functional teams, including Product, **UI/UX, DevOps, and offshore developers**, to deliver features in agile sprints with continuous deployment.
- Ensured compliance with **Walmart's engineering and data governance** standards through rigorous system security measures.
- Monitored and optimized **API performance with Grafana, tracking latency, error rates, and traffic volume** to enhance overall system reliability.
- Developed and orchestrated container-based applications using **Docker and Kubernetes**, which streamlined the deployment process and enhanced the scalability of microservices
- Applied deep knowledge of computing concepts such as service-oriented architecture and **RESTful services to design fault-tolerant, self-healing systems, enhancing multi-threaded programming efficiency**
- Implemented distributed validation and **fraud-detection workflows using Kafka topics and consumers**, ensuring real-time classification and filtering before media was saved or forwarded to downstream systems.
- Enhanced project performance by **reducing upload processing time, preventing fraudulent content from entering the system**, and improving the accuracy of automated verification processes. Contributed directly to reduced manual review efforts and improved user experience

Bridgetown Consulting Group

Oct 2024 - Mar 2025

Full Stack Java Developer

Santa Clara, CA

- Engineered responsive, user-friendly web interfaces using **HTML, CSS, JavaScript, Angular, and React.js**, contributing to scalable application features and improved user engagement.
- Designed and built **cloud-native, high-performance microservices** using **Java, Scala, and Go**, focusing on scalability, reliability, and low-latency processing.
- Developed and maintained **RESTful APIs with Java and Spring Boot**, leveraging object-oriented design principles for efficient data exchange in a component-oriented architecture.

- Implemented authentication and authorization mechanisms to secure **API endpoints**, ensuring the reliability and integrity of back-end services.
- Streamlined development processes by automating deployment pipelines using **CI/CD tools such as Jenkins and GitLab CI, reinforcing rigorous engineering practices.**
- Integrated third-party **APIs using Node.js and Spring Boot** to optimize data processing and reduce system response times, supporting scalable backend operations.
- Managed cloud infrastructure using **Amazon Web Services (AWS), including RDS and EC2**, to enhance system reliability and scalability
- Integrated SQL and NoSQL database solutions within microservices architectures to optimize data access patterns and system responsiveness
- Implemented service integration and routing workflows with **Apache Camel** and deployed applications on **Apache Tomcat and JBoss** application servers.

DBS **Sep 2021 - Aug 2022**
Software Engineer *Hyderabad India*

- Developed and implemented cloud-based banking solutions using **Java, Spring Boot, and AWS, applying object-oriented design patterns** to ensure seamless integration and scalable backend functionality.
- Constructed and integrated **RESTful APIs for frontend applications using Angular and React.js**, enhancing system interoperability and aligning with robust software development processes including source control and bug tracking.
- Automated banking workflows to reduce manual efforts by 23%, leveraging process automation in critical operations such as Term Deposit interest calculations and journal auditing.
- Enhanced system security by employing JAAS-based authentication mechanisms and securing batch data flows, underscoring a commitment to design documentation and secure coding practices.
- Optimized database performance, reducing **Tivoli Batch** Job execution times by 30% and bolstering overall system efficiency while maintaining high levels of reliability.
- Streamlined CI/CD pipelines with Jenkins and embraced Agile methodologies (Scrum/Kanban) to improve build, testing, and deployment workflows, ensuring consistent and traceable software development practices.
- Implemented Docker containerization to support scalable **microservices deployment**, supporting a distributed backend system approach suited for high-volume data environments.
- Implemented **Kafka-based messaging queues** for asynchronous processing, which improved system communication and optimized performance in distributed systems, leading to more efficient data handling
- Customized **Finacle Core banking** modules to improve operational efficiency by 20%, applying component-oriented architecture principles to tailor product enhancements.
- Crafted dynamic, responsive user interfaces with **React.js, Redux, JavaScript, and CSS**, contributing to an enhanced customer experience and efficient content management
- Ensured **high test coverage, clean code, and production readiness** through unit/integration testing, code reviews, documentation, and cross-functional collaboration.

Capgemini **Jul 2019 - Sep 2021**
Software Developer *Bengaluru, India*

- Developed and tested RESTful microservices using **Java and Spring Boot**, improving backend modularity and deployment flexibility.
- Implemented **centralized logging with Log4j**, reducing debugging time and improving production issue tracking.
- Led integration testing efforts using tools such as Postman and JUnit to verify end-to-end functionality, ensuring robust communication between microservices in distributed systems.
- Performed **end-to-end API testing** using Postman and JUnit, ensuring reliable communication across distributed services.
- Integrated the Stripe payment gateway for secure online transactions, supporting over 100 transactions daily and reinforcing reliable content delivery processes.
- Established centralized logging with Log4j to improve error tracking and troubleshooting across microservices, reducing debugging time and supporting systematic, data-driven problem solving
- Assisted in **database design and query optimization** using MySQL, improving response times for core application workflows.

BSNL **Nov 2018 - May 2019**
Engineer Intern *Mysore, India*

- Assisted in developing and testing **backend utilities using Java and SQL** to support telecom network monitoring and reporting tools.
- Performed **log analysis and data validation** to identify network performance issues and improve system reliability.
- Supported engineers in **automating routine network checks** using scripts, reducing manual monitoring efforts.
- Worked with **Linux systems and server configurations**, gaining hands-on experience with production infrastructure.
- Collaborated with senior engineers to **document system workflows and troubleshooting procedures**, improving operational efficiency.

Education

Campbellsville University

Master of Science, Computer Science

Jan 2023 - Aug 2024

USA

- **GPA:** 4.0

- **Coursework:** Advanced Programming Languages, Advanced Database, Advanced Operating Systems, Artificial Intelligence, Cyber-law, Regulations, & Compliance, Software Engineering

Visvesvaraya Technological University

Bachelor's, Computer Science

Aug 2015 - Jul 2019

Karnataka, India

- **Coursework:** Data Structures and Algorithm, AI/ML, Operating Systems, DBMS, Web Technology, Internet of Things (IoT), Cloud Computing, Big Data Analytics, Cyber Security, Object-Oriented Programming (OOP)

Projects

Flight Management System (Mini-Project)

- Built a flight booking system to manage flight schedules, bookings, and cancellations.
- Developed the frontend using Angular 6, ensuring a responsive and user-friendly interface.
- Implemented the backend with Spring Boot, enabling the system to handle large volumes of data efficiently.

Certification

- **Oracle Certified Associate: Oracle Certified Associate, JAVA SE8 Programmer**
