SUMMARY

Full Stack Software Engineer with about 7 years of experience in analysis, design, and development of scalable, cloud-native applications across Telecommunications, Financial and Aerospace Logistic. Proficient in Java, SpringBoot, Angular, AWS, Docker, Kubernetes with a strong focus on microservices architecture, Restful services, and CI/CD pipelines. Experience in TDD, ensuring high-quality code and robust system performance. Proven ability to collaborate with a cross-functional team in Agile Environments driving the innovative solutions and continuous delivery. Passionate about learning new technologies and best practices to solve complex problems, enhance system efficiency, and deliver business value.

• **Inversion of Control(IoC)** • **Dependency Injection(DI)** • **Object Oriented Programming(OOP)** • **Solid Design Principles** • **Software Development Lifecycle(SDLC)** • **Microservice Architecture** • **Event Driven Architecture(EDA)**.

SKILLS

Languages: Java/J2EE, Python, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, jQuery, Ajax

Frameworks: Spring, Spring Boot, Spring Test, Kotlin, Scala Hibernate, Angular (JS, 10, 14, 17), React, OAuth2, JWT, WebSockets

Databases: RDMs (MySQL, Oracle, PostgreSQL, SQL Server), NoSQL(DynamoDB, MongoDB, Cassandra)

Cloud Platforms: AWS (EKS, S3, SNS, SQS, Lambda, RDS, CloudFormation, API Gateway), Azure

Messaging Systems: Kafka, RabbitMQ

Unit Testing: JUnit, Mockito, PowerMock, WireMock, Selenium, Jasmine, Karma, Jest

DevOps Tools: Jenkins, Docker, Kubernetes, Prometheus, Grafana, ELK Stack

Tools: Jira, Confluence, Git, SVN, GitHub, Bitbucket, SonarQube, Postman, soapUI, Tomcat, WebLogic, WebSphere, JBoss

Operating Systems: Windows, Linux, macOS

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

Verizon, Irving, TX

March 2022 – Present

- Involved in analysis, design, and implementation of the SCM Catalog Portal using Java 17, Spring WebFlux (Reactor, WebClient), MongoDB, and Angular Material with Reactive Forms, delivered responsive non-blocking microservices for catalog search.
- Developed/Consumed RESTful APIs for internal and external service integration. Created Event-Driven and AWS Lambda functions to process SW order notifications using AWS SNS and CloudWatch triggers.
- Migrated legacy Java-based platforms to AWS EKS with Helm charts, AWS Fargate, and GitOps deployment flow, configured IAM roles, VPC subnets, autoscaling, and namespace isolation per environment.
- Ensured expected application performance levels by collaborating with cross-functional teams including data scientists, DevOps engineers, and system integrators to deliver seamless solutions.
- Automated reporting for SW orders using PL/SQL procedures, Oracle DB Jobs, Bash shell scripts, and cron scheduling, replaced Excel-based manual workflows with fast, audit-ready pipeline reports.

- Integrated Apache Kafka with Spring Kafka for async billing events, implemented durable producers, consumer group configs, Avro schema enforcement, DLQ routing, and log-compacted topic support.
- Secured REST APIs using Spring Security using JWT tokens with custom authentication filters and OpenAPI documentation and configured HTTPS and TLS for secure microservice communication and managed SSL/TLS certificate lifecycles.
- Monitored production systems using Prometheus, Grafana, and ELK, responded to alerts, and implemented automated recovery and alerting strategies to improve incident response.
- Implemented Resilience4j for retries, circuit breakers, bulkheads, and timeouts in WebFlux microservices, added fallback logic using reactive Mono/Flux operators for upstream dependency resilience.
- Deployed end-to-end CI/CD pipelines via Jenkins with Docker, Helm, CloudFormation, and AWS ECR and added pipeline linting, Slack notifications, rollback hooks, and gated approvals for production pushes.
- Used Linux servers for operational support, JVM performance tuning, log scraping with awk/sed, cron-based job orchestration, Bash automation scripts, and SSH-based deployment troubleshooting.

Technologies used: Java 17, Python, Spring Boot, Spring Security, Reactive Programming(Mono, Flux), MongoDB Reactive, Oracle, Angular 14, RxJS, EKS, Hibernate, Resilience4J(Circuit Breaker, Retry), RESTful APIs, OpenAPI(Swagger), Kafka, Prometheus, Grafana, Jenkins, Kubernetes, Docker, Agile/Scrum, CodeBuild, CodePipeline, CloudWatch, Sonar, Log4j, Kibana, ETL, Version Control(Git), IntelliJ.

Full Stack Software Engineer

Fidelity Investments, Westlake, TX

June 2020 – February 2022

- Worked on Wealth Management Portal using Java 11, Spring Boot (MVC, JPA, Validation), React.js, Axios, optimized complex Oracle PL/SQL joins and subqueries using EXPLAIN PLAN and materialized views.
- Configured Redis caching with Spring Cache and Redisson client, tuning key TTLs, LRU eviction policies, hash structures, and serialization for high-frequency session and trade data access.
- Hands-on experience deploying, managing, and scaling applications on Azure Virtual Machines and Azure App Services by provisioning infrastructure using ARM templates.
- Defined Virtual Machines, Azure Database for Oracle, RBAC roles, Virtual Machine Scale Sets, and Azure Monitor alerts, with YAML configurations stored in a Git-managed Infrastructure-as-Code (IaC) repository.
- Designed CI/CD pipelines with Jenkins, GitHub, Maven and implemented multi-stage builds, integrated SonarQube scans, and used CodeDeploy for safe blue/green releases.
- Integrated RabbitMQ with Spring AMQP, defined durable queues, manual acknowledgment mode, topic exchanges, retry handlers, and DLQs for async processing of trade events and approvals.
- Built Spring Batch workflows for nightly transaction processing, configuring job parameters, skip/retry logic, task executor threads, job listeners, and custom item processors for large file loads.
- Deployed and configured ELK Stack (Elasticsearch, Logstash, Kibana) used Filebeat agents, custom Grok patterns, index templates, and ILM policies for API and audit log analysis.
- Tuned Oracle PL/SQL stored procedures and reporting queries using AWR reports, adaptive execution plans, optimizer hints, bind peeking, indexed views, and histograms for consistent throughput.
- Mentored junior developers, conducted peer code reviews, provided constructive feedback, and participated in system testing to uphold code quality, ensure platform stability, and enforce engineering best practices.

Technologies used: Java 11, TDD, Spring Boot, Spring Caching, React.js, RESTful APIs, Spring Batch, Hibernate, Oracle, PL/SQL (Stored Procedures, Functions, Packages, Triggers), EXPLAIN Plan, Indexing, JUnit, Mockito, WireMock, WebLogic, Gradle, Azure, Jenkins, RabbitMQ, GraphQL, Datadog, React, Redux, Node.js, Express.js, Next.js, API Integration, Responsive Web Design, Next.js, SLF4J, Visual Studio.

Java Developer

KLX INC, Miami, FL

April 2018 – May 2020

- Developed Spring Boot-based Order Management system using Java 11, ExecutorService, and CompletableFuture to parallelize inventory checks and shipment status aggregation from external APIs.
- Secured REST APIs with Spring Security, OAuth2, and JWT tokens, enforcing role-based access control using RBAC policies and integrating with identity providers like Keycloak and maintained security compliance with internal and industry standards.
- Integrated Apache Kafka and Spring Kafka for asynchronous messaging, setting up producer/consumer configs, Avro schemas, and stream processing for low-latency event handling.
- Automated CI/CD pipelines with Jenkins, used Git hooks and Maven for build lifecycle, and exposed Prometheus-compatible metrics via Actuator endpoints for monitoring.
- Implemented pagination in DAO and repository layers using Spring Data JPA and offset/limit SQL clauses to support large dataset handling in JSON API responses.
- Configured Apache Tomcat with custom server.xml settings, tuned maxThreads and connectionTimeout, optimized HikariCP JDBC pool, and enabled GC logging for diagnostics.
- Wrote JUnit 5 and Mockito-based test suites for service, repository, and controller layers, integrated test runs into Jenkins pipelines with JaCoCo coverage reporting.

Technologies used: Java 8, Spring Boot, Spring MVC, AOP, Spring Cloud, JDBC, Kafka, AWS, EC2, S3, RDS, Jenkins, Spring, JMS, Multithreading, Pagination, Lombok, Spark, JSP, JAXB, EJB, JSF, JSTL, Maven, Prometheus, WebSphere, Servlets, REST, SOAP, JSON, WSDL, XML, Java profiling, Docker, Kubernetes, Terraform, Ansible, Logback, Dynatrace, Eclipse, SoapUI.

EDUCATION

Master of Information Technology, University of the Cumberlands, KY

Bachelor of Science in Computer Science, East Central University, OK
