

PRADEEP REDDY GUNNA
CLOUD/DEVOPS ENGINEER

Contact No: 9566723635
Email: gunnapradeepreddy07@gmail.com
LinkedIn: linkedin.com/in/gunna-pradeep-reddy

PROFESSIONAL SUMMARY:

Cloud/DevOps Engineer with **3 years of experience** designing, deploying, and automating **scalable infrastructure** in **AWS environments**. Skilled in building **CI/CD pipelines** using **Jenkins, GitHub Actions**, and **AWS CodePipeline** to streamline application delivery. Experienced in managing **containerized workloads** with **Docker** and **Kubernetes (EKS)**, including **Helm** and **GitOps** workflows via **Argo CD**. Strong proficiency in **Infrastructure as Code (IaC)** using **Terraform** and **CloudFormation** for repeatable, secure infrastructure deployments. Hands-on with **monitoring and observability** using **Prometheus, Grafana**, and **CloudWatch**, along with automation scripting in **Python** and **Bash**. Effective **collaborator** with a focus on **troubleshooting, system reliability, security best practices**, and **performance optimization**.

TECHNICAL SKILLS:

Scripting & Automation:	Python, Bash, PowerShell, Shell Scripts
CI/CD Tools:	Jenkins, GitHub Actions, AWS CodePipeline, Azure DevOps (basic)
Version Control:	Git, GitHub, Git branching strategies
GitOps Tools:	Argo CD
Containerization:	Docker, Docker Compose
Orchestration & Deployment:	Kubernetes (EKS), Helm, Blue-Green Deployments, Rolling Updates
Infrastructure as Code (IaC):	Terraform, AWS CloudFormation, Ansible (basic)
Cloud Platforms:	AWS (EC2, EKS, Lambda, S3, IAM, RDS), GCP
Monitoring & Observability:	Prometheus, Grafana, Amazon CloudWatch, Slack Alerts
Database Technologies:	MySQL, PostgreSQL, AWS RDS
Database Management:	SQL Queries, Index Optimization
Agile & DevOps Practices:	Agile, Scrum, Sprint Planning
Collaboration & Documentation:	Jira, Confluence, Slack, Microsoft Teams

PROFESSIONAL EXPERIENCE:

Client: Infosys Ltd – Richardson, TX	June 2024 – Present
Role: Cloud/DevOps Engineer	
<u>Responsibilities:</u>	
- Built multi-stage CI/CD pipelines using Jenkins, GitHub Actions, and AWS CodePipeline, reducing deployment times by 60%. - Developed reusable Terraform and CloudFormation templates for provisioning AWS resources, improving provisioning speed by 70%. - Deployed containerized applications on EKS using Helm with blue-green and rolling update strategies. - Integrated Argo CD for GitOps-based delivery with auto-sync and rollback capabilities. - Designed and implemented infrastructure monitoring using Prometheus, Grafana, and CloudWatch. - Automated EC2 log rotation, health checks, and alerting with Python and Bash, saving 10+ hours/week of manual effort. - Configured CloudWatch alarms and integrated Slack alerts, cutting incident response time by 50%. - Tuned PostgreSQL queries and indexing strategies, improving database response time by 35% in high-load APIs. - Implemented IAM roles and Secrets Manager policies, enforcing least privilege and secure access handling.	

- Led root cause analysis for high-severity incidents and implemented automated rollback policies, reducing recovery time by **40%**.
- Supported zero-downtime deployments using **Helm** canary release strategies.
- Built and optimized autoscaling groups and **load balancers** for high availability workloads.
- Participated in agile ceremonies including sprint planning and retrospectives, delivering continuous improvements.
- Authored internal runbooks, IaC documentation, and onboarding guides for new DevOps engineers.
- Collaborated with QA, dev, and release teams during go-live and off-hours testing phases.

Client: Flipkart – Hyderabad, India

Nov 2021 – Dec 2022

Role: AWS Cloud DevOps Engineer

Responsibilities:

- Engineered and maintained **Jenkins** and **GitHub Actions CI/CD pipelines**, reducing deployment failures by **45%**.
- Containerized monolithic applications using **Docker** and orchestrated workloads on **Kubernetes (EKS)**.
- Created **Helm** charts with environment-specific overrides for production, QA, and staging.
- Developed Terraform modules to manage **EC2**, **Lambda**, **S3**, **IAM**, and **DynamoDB** resources, cutting infrastructure setup time by **60%**.
- Implemented blue-green deployment pipelines with pre-deployment validation gates for rollback safety.
- Integrated **SonarQube** and CodeCov into pipelines, ensuring code quality thresholds were met pre-merge.
- Used **CloudWatch Logs** and metrics to monitor ECS task health, triggering alerts on failure thresholds.
- Enabled Slack-based alerting for build and deployment failures, improved engineering response time by **40%**.
- Conducted regular security reviews of **IAM policies** and rotated secrets through AWS Secrets Manager.
- Optimized **SQL** performance with query indexing and schema reviews, reducing data retrieval latency.
- Created Confluence-based documentation for **CI/CD** workflows and **Terraform** modules.
- Supported teams with feature deployment coordination and incident troubleshooting.
- Participated in agile planning and worked closely with Jira boards to track DevOps deliverables.

Client: CGI – Hyderabad, India

May 2021 – Oct 2021

Role: Cloud/DevOps Trainee

Responsibilities:

- Built sample **CI/CD** pipelines using **Jenkins** and Git to automate application build and deploy cycles.
- Wrote beginner-level **Terraform scripts** to provision **AWS EC2**, **S3**, and **IAM** resources under supervision.
- Developed Docker images for test applications and deployed them to Minikube and local **EKS** clusters.
- Used AWS CLI to manage infrastructure manually before transitioning to **IaC** automation.
- Created EC2 monitoring alerts with **CloudWatch** and integrated them with Slack notifications.
- Practiced writing **Python** and **Bash scripts** for log rotation, service status checks, and disk usage alerts.
- Collaborated with the internal team to document setup instructions for Kubernetes clusters and CI tools.
- Explored PostgreSQL setup in AWS RDS and ran queries for schema validation and performance tuning.
- Learned **Git branching** and created PRs as part of internal DevOps team training.
- Configured role-based access in Kubernetes using **RBAC** policies for demo environments.
- Shadowed engineers in real production deployments and participated in post-deployment reviews.

CERTIFICATION:

- **AWS Certified SysOps Administrator – Associate**
- **AWS Certified Cloud Practitioner**

EDUCATION:

Master of Science in Computer Science

University of Texas Rio Grande Valley, Edinburg, TX | January 2023 – December 2024
