Boston, USA | +1(617) 784-1018 | pradeepthi.songa@aogjob.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Versatile **Full Stack Developer** with 3 years of hands-on experience in designing, developing, and deploying scalable web applications using **Java, Spring Boot, React.js, Node.js**, and **TypeScript**. Proficient in building **RESTful APIs**, implementing **microservices architectures**, and managing robust authentication with **OAuth 2.0** and **JWT**. Skilled in both **relational and NoSQL** databases including **PostgreSQL, MySQL, MongoDB**, and **SQL Server**, with expertise in **query optimization** and data modeling. Experienced in **containerization and CI/CD pipelines** using **Docker, Jenkins**, and **Azure DevOps**.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, SQL, NoSQL, PHP
Frontend Development: React.js, React Native, Redux, Context API, HTML5, CSS3, SASS, JavaScript (ES6+) & TypeScript
Data Visualization: D3.js, Chart.js, jQuery
Backend Development: Node.js, Express.js, RESTful APIs & GraphQL, Microservices Architecture, API Gateway (Spring Cloud, Kong, Nginx), SOAP, OAuth 2.0, JWT, Role-Based Access Control
Databases: PostgreSQL, MySQL, MongoDB, SQL Server, Database Optimization & Query Performance Tuning
Cloud & DevOps: Azure, AWS (EC2, S3, Lambda, RDS), Jenkins, Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform, Helm, Prometheus, Grafana, ELK Stack
Testing & Performance Optimization: TDD, JUnit, Mockito, Jest, Enzyme, JMeter, Gatling, Performance Tuning & Code Refactoring, Unit Testing
Version Control & Tools: Git, GitHub, GitLab, Bitbucket, Agile & Scrum Methodologies, Jira, Confluence

PROFESSIONAL EXPERIENCE

Full-Stack Developer – JPMorgan Chase & Co., New York, NY | Aug 2024 – Present

- Scaled a loan origination and credit risk evaluation platform processing over \$500M+ in annual applications using **Java, Spring Boot**, and **React.js**, enhancing loan decision efficiency and accuracy
- Developed and optimized **RESTful APIs** with **Spring Boot** and **Node.js** for credit risk scoring and third-party integration, reducing manual review time by **30%**
- Improved backend fraud detection by implementing rule-based filters and utilizing **Redis** and **Spring Cache**, increasing API performance by **40%** and handling **1,000+** requests per second
- Implemented secure **OAuth 2.0** and **JWT authentication** across a **microservices architecture**, improving access control and passing all security audits
- Built internal **ETL pipelines** using **Java** to extract, validate, and transform large volumes of credit and transaction data, ensuring compliance and data accuracy
- Tuned **MySQL** databases by applying indexing and schema optimization, boosting query performance by **40%** and ensuring data consistency across services
- Created robust **unit and integration tests** using **JUnit** and **Mockito**, achieving over **90% test coverage** for critical business logic and services
- Collaborated with product owners and business analysts in **Agile teams** using **Jira** and **Confluence**, delivering **10+** key features and reducing development rework by **20%**

Full-Stack Developer – Version 1, Bangalore, IN | Oct 2021 – July 2023

- Developed dynamic financial dashboards using **React.js, D3.js**, and **Chart.js**, reducing manual reporting workload by **40%** for operations and finance teams
- Delivered a scalable online banking application with **Java, Spring Boot**, and **React.js**, supporting over **50,000** monthly users with a 99.9% uptime rate
- Executed security audits and compliance checks that eliminated critical vulnerabilities and improved audit success rate by **30%**
- Built and deployed **15+** microservices with **Spring Boot, MySQL**, and **API Gateway**, improving system modularity and cutting service latency by **20%**
- Automated deployment workflows using **Azure DevOps**, reducing release time from hours to **under 20 minutes** and minimizing post-deployment defects
- Managed scalable infrastructure on **Kubernetes**, ensuring high availability during peak loads with a **3x increase** in traffic handled without downtime
- Refactored legacy UI components using **Test-Driven Development (TDD)** and **React.js**, decreasing average page load times by **30%**
- Collaborated within **Agile Scrum teams** using **Jira** to refine user stories, contribute to sprint planning and retrospectives, and uphold code quality through regular reviews and feature delivery across **18+ product iterations**

EDUCATION

Master of Science in Information systems

Northeastern University **April 2025**
Boston, MA, USA
Relevant Courses: *Application Engineering & Development, Web Design and User Experience Engineering, User Experience Design and Testing, Advanced Medical Device Software engineering, Data Management and Database, Data Science, Software Quality Control and Management, Agile Software Development*

Bachelor of Technology in Materials Science and Engineering

National Institutes of Technology **May 2023**
Calicut, Kerala, India
Relevant Courses: *Data Structures & Algorithms, Computer Programming, Computational Methods, Machine Learning for Data Science and Analytics, Biomaterials Bio Imaging, Principles of Management, Algorithm and Data Structures*

PROJECTS

Project: Synclitics – Java-Based Workforce Analytics and Time Management Platform

- Developed **Synclitics**, a full-stack enterprise platform combining time tracking, project coordination, and workforce analytics for mid-sized organizations, using **Java (Spring Boot)** for the backend and **React.js** with **TypeScript** for the frontend
- Implemented core features such as timesheet submission, project assignment, and team calendar integration, with secure **JWT-based authentication** and **role-based access control** to manage different user types across departments
- Designed interactive dashboards and custom reporting tools using **Chart.js** and **PostgreSQL**, allowing managers to monitor team productivity and extract actionable insights from aggregated time and task data

Project: SmartPath – Biomedical Image Analysis and Diagnostic Platform

- Built a **full-stack biomedical image analysis platform** using **React.js, Node.js**, and **Python** to support healthcare professionals in identifying diagnostic patterns from medical images such as **MRIs** and **X-rays**
- Developed **machine learning models** using **TensorFlow** and **Scikit-learn** for anomaly detection and classification, integrating **image preprocessing** and **computational techniques** for enhanced accuracy
- Designed **RESTful APIs** and optimized backend workflows using **Express.js, PostgreSQL**, and **MongoDB** for managing image data and metadata efficiently
- Deployed the application using **Docker** and **AWS**, implemented secure authentication with **OAuth 2.0** and **JWT**, and followed **Agile practices** using **Git** and **Jira**

CERTIFICATIONS

- Meta Back-End Developer Professional Certificate
- Oracle certified Associate
- Azure Developer associate, Microsoft
