OBJECTIVE: *Passionate and results-driven Full-Stack .NET Developer with 5 years of experience delivering end-to-end enterprise solutions using ASP.NET, C#, Angular, Azure, and Kafka. Seeking to contribute to a high-impact engineering team by building secure, reliable, scalable, and high-performance cloud-native applications that drive measurable business outcomes.*

Professional Summary

- > Highly skilled **.NET Developer** with **5 years** of experience designing, developing, and deploying **investment, banking, and warehouse management platforms** using **.NET 6–9, .Net Framework 4.8, Angular 13–18, and Microsoft Azure**.
- > Designed and implemented **microservice-based, modular-monolithic, and serverless event-driven architectures (Pub/Sub) leveraging Kafka, Azure Functions, API Gateway, Front Door CDN, CQRS(MediatR), improving system resilience and reducing batch latency**.
- > Strong expertise in **Azure PaaS/IaaS, Azure DevOps CI/CD, Docker, and AKS blue-green deployments**, ensuring **99.9 % uptime and zero-downtime releases**.
- > Hands-on with **OpenTelemetry, Serilog, Application Insights, Azure Monitoring** and correlation IDs for distributed observability and system resilience.
- > Proficient in **SQL, PL/SQL, Dapper, and EF Core** for data modeling, query optimization, and high-throughput data access, improving database performance.
- > Extensively worked in writing DB Connections, **DDL, DML, T-SQL, DB Queries, Tables, Indexes, Views and Constraints, Normalization, PLSQL**-Stored Procedures, Triggers, Exception Handlers.
- > Experienced in **Angular13+, NodeJS, Angular Material UI, TypeScript, RxJS, and Bootstrap 5** for developing responsive SPAs that **support 25 % higher concurrency** and deliver excellent UX.
- > Follow **SOLID, OOP, Design Patterns, Algorithms, data structures and Clean Architecture** principles with **Dependency Injection (DI) and Inversion of Control (IoC)** to ensure maintainable, testable, and extensible systems.
- > Demonstrated success in **Agile Scrum teams — sprint planning, backlog refinement, and retrospectives — consistently delivering on-time releases** with measurable performance, security, and reliability gains.
- > Excellent **communication, analytical, problem-solving skills, strong teamwork orientation**, dedicated to **quality output** for the team or to individual assignments as required by the work environment. Willing to **learn new technologies**, ability to learn fast, and determined to achieve.

Technologies

Languages: C#, TypeScript, JavaScript, Python, SQL, PL/SQL
Frameworks: .NET 3.1 / 5 / 6 / 7 / 8 / 9 ASP.NET Core API, Framework 4.8, MVC 5, Razor, Entity Framework Core
Frontend: Angular 18 / 16 / 13, Node JS, RxJS, Bootstrap 5, Tailwind, Material UI, HTML5, CSS3
Architecture & Patterns: Microservices, Event-Driven, CQRS, Layered Architecture, Repository, Proxy-Facade, Dependency Injection, Worker Services, SOLID, SOA, N-Layered
Cloud & DevOps: Azure App Service, Azure Functions, Azure AKS, Azure Service Bus, Azure Storage (Blob, Data Lake), Azure SQL, Cosmos DB, Azure Key Vault, Azure Monitor, Docker, VM's, Azure DevOps (YAML Pipelines)
Streaming & Messaging: Kafka (Confluent Platform), Azure Event Hub, Azure Service BUS
Security & Auth: Azure AD B2C (JWT / OAuth 2.0 / OpenID Connect), Role-Based Access Control, HTTPS / SSL
Integration Tools: wkhtmltopdf, PaddleOCR, SendGrid, Stripe Payment Gateway (Idempotent PaymentIntent)
Data & ETL: Dapper, LINQ, EF Compiled Queries, Batch Processing, Connection Pooling, OLTP / OLAP, ETL via Kafka → Azure SQL / Blob Store, PostgreSQL, Odata 4+, cosmos db
Logging & Observability: Serilog, OpenTelemetry, Application Insights, Correlation IDs, Kusto Queries
Testing: XUnit, NUnit, Moq, Swagger, Fiddler, Postman (API Validation)
Version Control: GitHub, Azure Repos, Bitbucket
Other Tools: SQL Server Management Studio (SSMS 19.x/17.x/16), IIS, visual studio 22/19/15, VS Code, Xcode

PROFESSIONAL EXPERIENCE

Edward D. Jones & Co. – St. Louis, MO, USA

Full-Stack . NET Developer | Sep 2023 – Present

Project: *Investment Account Management and Real-Time Transaction Platform*

Environment: .NET 7/8 /9, C#, Angular 18, Azure (AKS, App Service, Functions, Front Door, SQL, Cosmos DB, Blob Storage), Kafka (Confluent), wkhtmltopdf, PaddleOCR, Stripe, Dapper, EF Core, Azure DevOps, Docker

- **Designed and developed** a high-performance **Investment Account Management Platform** for processing real-time transactions, portfolio insights, and payment flows across **50 K+ investment accounts**.

- **Architected and implemented a Kafka-based ETL pipeline** (Pub/Sub) to ingest, transform & load data from SRP, SAP, Excel, and API sources into Azure SQL, Cosmos DB, and Blob Data Lake — achieving less than **150 ms batch latency** and **60 % higher throughput**.
- Designed and implemented a **Retrieval-Augmented Generation (RAG)** system in .NET 8 using **GPT-4 Turbo AI LLM**, enabling multi-document PDF upload, **semantic vector search**, and natural-language Q&A with context-aware responses.
- **Developed** event-driven & serverless microservices using **.NET 8, CQRS, MediatR, Repository Pattern, and Polly Circuit Breaker**, improving **system resilience by 45 %** and ensuring message idempotency.
- Applied advanced **normalization** techniques including **1NF, 2NF, 3NF** and Boyce–Codd Normal Form (BCNF) to redesign relational schemas, eliminating update anomalies and improving data integrity, consistency, and query performance across transactional modules.
- **Built** secure API Gateway with **rate-limiting, health checks, correlation IDs, and OpenTelemetry distributed tracing**, sustaining **1.2 M requests/day** with **96.6% uptime**.
- **Implemented** Azure AD B2C JWT authentication with API Connector validation and role-based access for advisors and clients, improving security compliance by **30 %**.
- **Developed** Azure Functions & Web Jobs for **OCR (Paddle OCR), PDF generation (wkhtmltopdf), and SendGrid notifications**, reducing average function runtime by **55 %** through async execution.
- **Integrated Stripe Payment Gateway** with idempotent PaymentIntent logic with webhooks to ensure **100 % transaction accuracy** and prevent double charges across recurring billing cycles.
- **Containerized and deployed** APIs and background workers on **AKS (Helm, Ingress, HPA) & App Services** via multi-stage Docker builds, **Azure Monitoring** and **Azure DevOps CI/CD YAML pipelines**, enabling **zero-downtime blue-green deployments**
- **Implemented** centralized observability using **Serilog + Application Insights + OpenTelemetry**, cutting **MTTR by 50 %** through correlation-based diagnostics.
- **Tuned** SQL Server procedures, views, and indexes to improve query runtime by **70 %**, reducing API response time from **3 s → 200 ms** using Gzip/Snappy compression and connection pooling.
- **Leveraged** Azure Front Door + CDN caching for multi-region delivery, cutting global latency by **40 %** and enhancing user experience.
- Independently handled **production deployments** using well-defined **SOPs**, coordinating with **mid/junior** developers, utilizing **feature flags** for safe rollouts, and executing controlled releases.
- **Built** Angular 18 SPA with Material UI, NodeJS, TypeScript, RxJS, lazy loading, guards, and interceptors to support **25 % higher user concurrency** with optimized change detection.
- **Authored** XUnit/NUnit unit tests achieving **85–95 % coverage**, reducing production defects by **60 %** and increasing release stability.
- **Led root-cause analysis** on performance bottlenecks and user spikes (greater than 10 K concurrent sessions), resolving thread pool saturation and optimizing Kafka consumer batch sizes to improve throughput by **35 %**.
- Delivered in an **Agile Scrum** environment (sprint planning, backlog refinement, JIRA tracking, PO prioritization, retrospectives) ensuring on-time delivery of financial features.

HCL Technologies – Client: NatWest Group | Chennai, India

Full-Stack .NET Developer | Oct 2021 – Aug 2022

Project: *Digital Banking and Credit Decision Workflow System*

Environment: .NET 5/6, Angular 16, Azure App Service, Service Bus, Azure Monitoring, Key Vault, SQL Server 2019, Oracle PL/SQL, Azure DevOps, Docker, GraphQL

- **Designed and developed** a secure, event-driven Digital Banking Platform using **.NET 5/6** handling loan origination, transaction processing, and credit decision workflows for **30 K+ concurrent users** across multiple geographies.
- **Implemented CQRS + MediatR** for modular read/write segregation, improving API response time by **45 %** and enabling **auditable, versioned transaction workflows** for compliance.
- **Integrated Azure Service Bus (Topics/Queues)** to orchestrate asynchronous transaction events, reducing workflow latency from **2.5 s → 800 ms** and improving reliability by **50 %**.
- **Engineered transaction audit & reconciliation services** for credit approvals, repayments, and reversals with timestamped ledger trails, ensuring **100 % traceability and PCI/SOX compliance**.
- **Optimized** Oracle PL/SQL stored procedures, execution plans, and indexing — cutting query runtime by **60 %** and improving transaction throughput by **35 %**.
- **Secured APIs and dataflows** using Azure AD B2C, Key Vault-managed secrets, and IP restrictions — reducing vulnerability surface by **40 %**.
- Proactively **monitored** system health using Azure Application Insights by tracking **p95 latency, error %**, and dependency performance, enabling quick detection of issues, faster rollback decisions, and maintaining high application reliability.

- **Conducted root-cause analysis** for high-latency transaction spikes; resolved thread-pool exhaustion and SQL blocking, improving system uptime from **97.5 %** → **99.95 %**.
 - **Implemented GraphQL Gateway** to aggregate multiple downstream APIs and data sources, reducing frontend network calls by **30 %** and boosting UX performance by **40 %**.
 - **Built Angular 16 dashboards** with Reactive Forms, Material UI, and lazy loading, enhancing load times by **35 %** and improving accessibility across devices.
 - **Automated** builds and deployments via Azure DevOps CI/CD pipelines and containerized APIs using Docker, reducing release cycle time by **40 %**.
 - **Collaborated** with business and QA teams in Agile Scrum (bi-weekly sprints, JIRA tracking, retrospectives), ensuring seamless delivery of incremental banking features.
-

DHL Express – Chennai, India

.NET Developer | Dec 2019 – Sep 2021

Project: *Global Shipment Tracking and Logistics Management Portal*

Environment: .NET Framework 4.8 (legacy) / .NET Core 3.1 (modernized), C#, ASP.NET MVC, Razor, Angular 13, Azure App Service, Azure SQL, Blob Storage, Docker, Azure DevOps

- **Designed and developed** a centralized Warehouse Management Platform for real-time shipment tracking, package routing, and storage optimization across **120+ global hubs**.
 - **Modernized** legacy monolithic MVC system (.NET Framework 4.8) to **.NET Core 3.1** Web API architecture, improving processing speed by **45 %** and cutting deployment time by **60 %**.
 - **Implemented** microservices for shipment intake, storage allocation, billing, and order reconciliation, handling **250 K+ daily transactions** with **99.98 % reliability**.
 - Integrated **OData 4.01 with Entity Framework Core**, leveraging LINQ translation for secure, optimized database access and supporting real-time data exploration via Power BI and Excel connectors.
 - **Optimized** database operations (stored procedures, triggers, and indexing) to reduce query execution time from **1.5 s** → **400 ms**, improving warehouse data sync performance by **70 %**.
 - **Developed** Facade Service layer for cross-cutting concerns (validation, caching, auditing), reducing inter-service dependency by **30 %** and simplifying API orchestration.
 - **Integrated** warehouse scanning modules and RFID data ingestion using event-driven APIs to achieve **real-time inventory visibility (under 2 s delay)** across regions.
 - **Configured** Azure Blob Storage for secure document and label archiving with private container access and SAS tokens, increasing data security compliance by **40 %**.
 - **Implemented** shipment allocation algorithms and batching logic to improve warehouse space utilization by **25 %** and reduce dispatch delays.
 - **Containerized and deployed** APIs using Docker on Azure App Service staging slots, enabling **zero-downtime blue-green deployments**.
 - **Enhanced** global API performance using caching and load balancing, cutting latency for cross-region warehouse users from **2.2 s** → **900 ms**.
 - **Built** Angular 13 Material UI dashboards for shipment tracking and status visualization, improving page render speed by **40 %** and user efficiency by **35 %**.
 - **Performed root-cause analysis** on synchronization delays and thread-pool bottlenecks during seasonal spikes, reducing incident recurrence by **80 %**.
 - Delivered enhancements through **Agile Scrum** (daily standups, sprint reviews, JIRA tracking) ensuring consistent release cadence and global user satisfaction.
-

Educational Qualification

Master of Science: Applied Computer Science, 3.9/4.0 CGPA

Northwest Missouri State University, 2022-2023
