Summary

Data Analyst with 3+ years of experience delivering analytics-driven business outcomes through scalable dashboards, automated ETL workflows, and advanced statistical models. Expertise in Power BI, Python, SQL, PySpark, and cloud-Azure and AWS. Adept at collaborating with stakeholders, defining KPIs, and building end-to-end data solutions to support product, finance, and marketing teams. Proven ability to transform raw data into actionable insights for strategic planning and operational efficiency.

Education

Master of Science in Computer Scienc
Monroe University, NY, USA

Sep 2022 – Dec 2024

B.Sc in Physics
Gujarat University, Ahmedabad, India

Jun 2012 – Apr 2015

Skills

- **Data Analytics & Reporting:** Power BI, Tableau, DAX, Excel, KPI Dashboards, Time Series, Cohort Analysis
- **Programming & Scripting:** Python, SQL, PySpark
- **Database & Tools:** Azure SQL, PostgreSQL, Snowflake, Databricks, CosmosDB, Redshift
- **ETL & Workflow:** ADF, Airflow, Delta Lake, dbt, GitHub CI/CD
- **Statistical Analysis:** Regression, Clustering, Forecasting, A/B Testing
- **Soft Skills:** Communication, Storytelling with Data, Agile Collaboration

Experience

Goldman Sachs, USA

Jul 2024 - Present

Data Analyst

- Developed and maintained scalable Power BI dashboards with advanced DAX measures and KPI indicators to support executive-level decision-making across sales, product, and operations, resulting in a 25% improvement in real-time visibility of key business metrics.
- Automated data integration from PostgreSQL, CosmosDB, and third-party APIs using Azure Data Factory and Airflow, creating end-to-end ETL workflows that reduced manual data refreshes by 80% and ensured data reliability for near real-time reporting.
- Conducted detailed cohort and funnel analysis using SQL, Power BI, and Python to evaluate user engagement patterns across product journeys, enabling targeted marketing strategies and feature prioritization with a 30% lift in user retention.
- Designed regression-based forecasting models using Python (pandas, statsmodels) to predict inventory demands, reducing overstock costs by 18% and optimizing supply chain operations across 3 regional warehouses.
- Partnered with finance teams to design a Snowflake data mart and implement dbt models for financial reporting, enabling traceable, version-controlled transformations and ensuring compliance with quarterly audit requirements.
- Led A/B testing design and analysis for marketing campaigns, using Power BI and statistical techniques to identify high-performing segments, which resulted in a 12% increase in click-through rates and 8% growth in conversion.
- Actively participated in Agile planning meetings with product managers, data engineers, and stakeholders to align backlog priorities with analytics deliverables, enhancing cross-functional delivery and sprint velocity.

Hexaware Technology, India

Jan 2020 - Aug 2022

Data Analyst

- Designed end-to-end data pipelines using PySpark on Databricks to extract, transform, and load sales and customer data from disparate sources including AWS Redshift, Snowflake, and CRM systems, reducing report generation time by 65%.
- Created Tableau dashboards and Excel-based financial models to track revenue, margin, and operational KPIs for client accounts, driving a 20% improvement in forecast accuracy and enabling data-backed quarterly planning.
- Developed customer segmentation strategies using K-means clustering and demographic analysis in Python, enabling the marketing team to implement campaigns that achieved a 22% increase in campaign ROI.
- Built predictive churn models and time series forecasts for subscription services using Python (scikit-learn, ARIMA), identifying at-risk segments and supporting retention campaigns that reduced churn by 15%.
- Configured and deployed dbt models in Snowflake to maintain clean, modular transformation layers supporting ad-hoc business queries, enabling analysts to self-serve insights while improving data lineage and governance.
- Implemented data quality checks and performance tuning strategies in SQL (CTEs, window functions, indexing) to enhance query efficiency and ensure SLA compliance for high-priority reporting pipelines.
- Facilitated analytics requirement gathering sessions with business teams and translated needs into technical solutions, driving successful delivery of over 10 cross-departmental reporting projects under Agile methodology.
