## SUMMARY

Data Analyst with 3.5+ years of experience in deriving actionable business insights from complex datasets. Skilled in data wrangling, Query optimization, visualization, dashboard creation, and statistical analysis using Python, SQL, Power BI, and Tableau. Adept at transforming raw data into strategic intelligence to support business decisions in financial, healthcare, and technology domains.

## SKILLS

**Programming & Scripting languages:** Python, SQL, Scala, R, Bash Scripting  
**ETL & Data Engineering Tools:** Apache Airflow, Talend, Apache Nifi, dbt, Azure Data Factory, Alteryx, Informatica, Databricks  
**Data Analysis & Reporting:** Tableau, Power BI, Looker, Microsoft Fabric, Data Analysis Expressions (DAX), Microsoft Excel (VBA)  
**Databases & Data Warehousing:** Snowflake, PostgreSQL, Oracle, MySQL, MS SQL Server, MongoDB, Amazon Redshift, HBase  
**Cloud & Data Platforms:** AWS(S3, EMR, Athena, SageMaker, Kinesis), Azure(Data Lake, Blob Storage, Event Hubs, Synapse Analytics)  
**Data Science & Machine Learning:** Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, TensorFlow, K-means, Regression, XBoost  
**Project Management & Collaboration:** Jira, Confluence, Slack, Microsoft Office Suite (Excel, PowerPoint), CI/CD

## WORK EXPERIENCE

### Data Analyst | Wells Fargo, USA Jan 2024 – Present

- Performed exploratory data analysis (EDA) using Python and SQL on 2TB+ daily financial data, then leveraged PySpark on Azure Databricks to clean, transform, and model the data for reporting, streamlining workflows and reducing data preparation time by 15%.
- Applied K-Means clustering to customer behavior data, segmenting clients by risk and transaction patterns to drive personalized financial product offerings.
- Designed and built interactive Power BI dashboards and SSRS reports by integrating financial and operational data from Azure Synapse and SQL Server, and Microsoft Fabric, empowering regulatory and compliance teams with real-time KPI monitoring.
- Created advanced DAX measures for portfolio analysis, including risk-adjusted returns, compliance thresholds, and trend visualizations, enabling rapid insights for financial decision-makers.
- Leveraged Azure OpenAI LLMs to analyze predictive models and customer behavior, generating personalized insights enabled financial advisors to tailor recommendations by risk profile boosting client satisfaction and portfolio performance.

### Data Analyst | Wipro Limited, India Aug 2021 – Jul 2022

- Monitored in-depth ETL validation and data quality testing using Apache NiFi and Talend to ensure clean, consistent data feeding into dashboards and executive reports.
- Developed and executed A/B tests on patient onboarding and reminder workflows, analyzing no-show rates and response times, leading to a 15% boost in appointment adherence.
- Implemented advanced SQL techniques, including indexing, partitioning, and window functions, resulting in a 40% reduction in query execution time and a 30% improvement in overall database performance.
- Collaborated cross-functionally with data engineering teams to aggregate and analyze healthcare data from Redshift, PostgreSQL, and Snowflake, supporting ad-hoc reporting and quarterly business reviews.
- Spearheaded and maintained interactive Tableau dashboards to provide unified insights into healthcare operations, improving patient workflow visibility and boosting compliance with HIPAA and clinical quality metrics by 25%.
- Trained a healthcare fraud detection model using Amazon SageMaker's XGBoost on claims data, incorporating features like procedure frequency, provider behavior patterns, and diagnosis mismatches, boosting fraud detection precision by over 20%.

### Data Analyst | Maxgen Technologies Pvt. Ltd., India Apr 2020 – Jul 2021

- Executed Advanced Python scripts using Pandas and Numpy to clean, validate, and transform complex multi-source datasets, improving data accuracy by 25%, which directly enhanced the precision of sales forecasting and customer segmentation models.
- Conducted EDA using Pandas, Matplotlib, and Seaborn to identify customer behavior patterns, and applied regression analysis to detect key churn indicators, enabling targeted retention strategies that reduced customer attrition.
- Automated weekly and monthly recurring reports in Excel using VBA macros reducing manual effort and ensuring timely and consistent delivery of key reports.
- Constructed and developed dynamic dashboards in Tableau and Looker, integrating data from Redshift and other sources to visualize real-time KPIs such as revenue trends, customer segmentation, and operational efficiency.

## ACADEMIC PROJECTS

### Predictive Analytics for Manufacturing Defects | Python, Delta Lake, Azure Data Factory, Databricks, PowerBI

- Simulated and processed 10M+ manufacturing sensor records using Azure Blob Storage and Delta Lake, and deployed a defect prediction model with MLflow on Azure Databricks, integrating results into Power BI for real-time monitoring.

### Real-Time Twitter Stream Processing & Trend Monitoring| Python, Apache Spark, Kafka, Airflow

- Consolidated a real-time data pipeline using Apache Kafka, Spark Streaming, MongoDB, and AWS S3 to process and analyze streaming Twitter data for emerging trends, hashtag surges, and sentiment shifts, while automating event-triggered alerts via Slack and email for proactive, insight-driven decision-making.

## EDUCATION

### Master of Science in Computer Science Aug 2022 – May 2024

California State University Long Beach | Long Beach, CA
