Education

California State University, Dominguez Hill

Aug 2023 – Dec 2025 (Expected)

Master of Science in Computer Science, GPA: 3.8

California, US

Coursework: Data Structures, Algorithm Analysis, Object Oriented Analysis and Design, Data Science, Adv Software Engineering, Adv Programming, Software Project, Adv Operating System, Security Engineering

RNS Institute of Technology

Jun 2021

Bachelor of Engineering in Information Science Engineering

Bangalore, India

Coursework: Object Oriented Concepts, Database Management System, Python, Programming in C, Web Technology, Data Structures

Technical Skills

Languages and Frontend: Python, JavaScript, TypeScript, React, React Native, NextJS, Tailwind CSS, Shaden UI

Backend and Frameworks: Django, Node.js, Express.js, NestJS, FastAPI, REST APIs, Authentication & Authorization

Databases and Cloud: PostgreSQL, MySQL, MongoDB, Prisma ORM | AWS (EC2, AMI, S3, IAM, DynamoDB, SNS), Firebase, Docker, Vercel, Railway

Development and AI Tools: Git, Visual Studio Code, Postman, VirtualBox, ngrok, Anaconda, JIRA, Expo, Vite, Jenkins, GitHub Actions, CI/CD Pipelines, Containerization | OpenAI API (GPT-3.5, GPT-4o, Whisper, Vision), Computer Vision, Speech Recognition, Multi-agent Systems, MCP, Langchain, Vercel v0, Cursor

Professional Experience

Software Engineer Intern | Appleute | Bangalore, India

Oct 2021 - Mar 2022

- Developed core features for **Betra**, an MVP enabling cashierless, AI-powered shopping in small retail stores.
- Built the **React Native** app supporting QR-based store entry/exit, digital shopping carts, and automatic credit card payments.
- Optimized performance using **memoization**, **caching**, and **auto-brightness** enhancements, improving user engagement by **40%** during pilot testing.
- Streamlined backend **APIs** with **NestJS** decorators, reducing loading times by 25% in internal benchmarks.
- Integrated **Internationalization (i18n)** and **local storage** to enable **multi-language** and **offline support**.

Projects

Diff Digest | React, TypeScript, Express, OpenAI API, GitHub API | [Github](#)

Apr 2025 - May 2025

- Developed a **full-stack web app** that generates AI-powered release notes from GitHub pull requests to streamline developer and marketing workflows.
- Integrated **OpenAI GPT-4o** via streaming API to produce developer and marketing notes in real time, enhancing visibility across teams.
- Built a robust streaming renderer using **multi-layer caching** in **React** (state, refs, module buffer) to safely handle fragmented AI-generated HTML.
- Created a modern, responsive UI with **Vite**, **TailwindCSS**, and **Shaden UI**, supporting dark/light themes and animated transitions.
- Engineered an Express backend with **GitHub API** integration for PR diff parsing, metadata enrichment, and paginated fetching.
- Structured the codebase with clean architecture, strong **TypeScript** typing, and extensibility toward database-backed caching for future scalability.

ReKindle | React Native, Expo, OpenAI GPT-4o, Whisper API | [Github](#)

Jun 2025 - Jun 2025

- Built a cross-platform mobile app to automate personalized networking follow-ups using business card and LinkedIn **QR code scanning**, **voice note transcription**, and AI message generation.
- Implemented GPT-4o-powered follow-up generation and **Whisper-based voice transcription** to capture **conversation context** and produce relevant, human-like messages.
- Designed a privacy-first, **local-storage-based architecture** with offline support and **intelligent search** across names, topics, and event metadata.
- Added support for **dark mode**, streamlined **contact history**, and message **preview/edit flow** for better usability and control.
- Ideated and shipped the full project in under **24 hours** during a **hackathon** hosted by **GMI Cloud**, addressing **real-world pain points** in **student** and **early-career networking**.

Voice-Driven Productivity Assistant | React Native, NestJS, Firebase, Whisper API | [Github](#)

Mar 2025 - Apr 2025

- Built a **cross-platform** mobile app enabling users to capture and manage tasks through voice input for enhanced productivity.
- Integrated OpenAI **Whisper API** for real-time audio transcription and **GPT-3.5** to generate smart task titles and productivity suggestions.
- Developed a secure backend with **NestJS** and **PostgreSQL** (via **Prisma ORM**), featuring **Firebase Authentication** and real-time data sync.
- Designed a dark-themed, responsive UI using **NativeWind (TailwindCSS)** to support intuitive interaction and improve user experience.
- Focused on modular architecture, API security, and offline-friendly UX to prepare the app for real-world deployment.

Achievements

AgentBay | AI Agents + MCP Hackathon | 3rd place | [Github](#)

- Built a modular multi-agent MVP in 6 hours during the Hackathon using **FastAPI**, **Langchain**, and **OpenAI GPT-4o**, enabling conversational workflows for YouTube, finance, and travel queries.
- Implemented context-aware agent coordination using the **Model Context Protocol (MCP)** standard.
- Developed the backend with **Cursor** and designed the frontend using **Vercel v0**, integrating a multi-agent chat UI with real-time routing.
