

PRANAV BHARTIYA

CSE recent grad with strong math skills.
Expertise in ML, full stack and advanced algorithms.

EDUCATION

University of California, Davis [9/21 - 6/25]
B.S. Computer Science and Engineering
2x Dean's List. GPA: 3.5

SKILLS

Languages: C/C++, Python, Java, JS, HTML, CSS, Go.
Technologies: React.JS, Node.JS, MongoDB, Tensorflow, OpenAI API, REST API, PyTorch, CUDA, GCP.
Tools: Git, Postman, Studio 3T, Colab, LangChain.

RELEVANT COURSEWORK

Data Structures and Algorithms, Artificial Intelligence, Computer Vision, Operating Systems, Computer Networks, Software Engineering, Algorithm Design and Analysis, Computer Architecture, Theory of Computation.

WORK EXPERIENCE

07/25 – current

Agentic AI Intern
• Developed an AI-powered legal document automation system using **Gemini API** and **LangGraph**.
• Built a **multi-node pipeline** for document classification, validation, and court document generation.
• Integrated **Pinecone** vector database and document processing libraries for legal automation.

OAISIS

06/24 – 09/24

ML/AI Intern
• Built a **custom AI chatbot** with **GPT-3.5 Turbo**, grounded strictly in verified sources.
• Delivered a **PoC** to demonstrate chatbot capabilities, enhancing information retrieval accuracy.
• Integrated AI into a **pipe stress analysis tool**, improving automation efficiency for engineering calculations.
• Worked in **Agile Scrum** environment, participating in sprint planning, stand-ups, and retrospectives.

Hexagon ALI

04/21 – 06/21

Software Development Intern
• Researched and tested **ML models for body landmark identification** using **TensorFlow**.
• Compared accuracy and performance of models like **OpenPose, PoseNet, and others**.
• Created reports and insights to support business and technical teams in selecting optimal ML models.

ProtoTech Solutions

LEADERSHIP AND TEACHING EXPERIENCE

09/24 – 06/25

Founder and President of MLSN (College Club)
• Lead a **50+ member club** focused on collaborative **AI/ML projects and emerging technologies**.
• Organized hands-on **workshops, cohorts, and lectures** to engage students in practical ML concepts.

Machine Learning Student Network

02/25 – 06/25

Tech Director at GDSC (College Club)
• Mentored two cohort teams on ML projects: **eye disease detection** and **restaurant recommendation**.
• Led task planning and provided **technical support** during development, from ideation to deployment.

Google Developer Student Club

07/23 – 03/25

AATC Maths and Physics Tutor
• Tutored **100+ students**, breaking down complex concepts in an interactive learning environment.
• Improved student performance with **personalized learning strategies** and engaging teaching methods.

UC Davis

PROJECTS

Google Project

Real Estate CRM App for Investors
• **Mentored by Google SWEs**, developed a multi-platform app (Android, iOS, Web) for real estate investors.
• Allows users to **geo-tag potential sites** and provides tracking tools for property acquisition.
• Technologies used include TypeScript, Expo Tools, Node.js, PostgreSQL, Google Maps API, GCP (hosting).

github link

Tensorflow

House Price Predictor ML Model
• Created a **robust machine learning model** leveraging **Tensorflow framework** to predict house prices.
• Trained on a dataset of **over 21,000 entries**, predicting house prices with a remarkable **high accuracy**.

github link

Full-Stack App

Travel AI Companion
• Built a **React TypeScript** web app integrating **GPT-4 API** for smart travel planning and recommendations.
• Implemented AI chat interface with **JSON parsing** to extract travel info and suggestions from responses.
• Created interactive visual components including maps and dynamic itinerary cards using **Tailwind CSS**.

github link

CUDA

Accelerated Generative Adversarial Network (GAN)
• Developed a GAN using **CUDA C++ kernels**, bypassing frameworks like Tensorflow for core operations.
• Designed a complete **DCGAN architecture** with **custom convolutional layers**, achieving stable training.
• Implemented and validated **GEMM, activation functions**, and the **Adam optimizer** against **NumPy**.
