Education

University of Illinois at Urbana-Champaign

Bachelor of Science in Math and Computer Science

Champaign, IL

Aug 2021 - May 2025

Experience

ISI Enterprises

Herndon, VA | Remote

Software Engineer

Aug 2024 - May 2025

- Architected scalable web components using React, Redux, RTK Query, and TypeScript, delivering type-safe applications with enhanced code maintainability and reduced technical debt
- Achieved comprehensive test coverage by developing unit tests for all features, ensuring robust error handling and maintaining bug-free production deployments
- Improved application performance by 25% through component refactoring, creating reusable UI elements that reduce code duplication and better rendering efficiency

Software Engineer Intern

May 2024 - Aug 2024

- Developed and integrated React components for Security Control, contributing to enhanced application functionality and UI consistency
- Debugged and resolved code defects across multiple modules to ensure compliance with project specifications and deliver improved user experience
- Maintained code integrity and facilitated team collaboration through Git version control best practices, including branching strategies and merge conflict resolution

Unum

Chattanooga, TN

Software Engineer Intern

May 2023 - Aug 2023

- Improved web accessibility by implementing ARIA-compliant components in React, improving user experience for assistive technology users
- Diagnosed and fixed critical bugs in internal data enrichment APIs using C#, improving system reliability and data processing accuracy
- Collaborated effectively in an Agile development environment, participating in sprint planning, daily standups, and retrospectives to deliver iterative improvements

Projects

Clean Up Give Back

- Engineered a React Native mobile application to automate tracking volunteer hours for Clean Up Give Back, reducing manual data entry by 80%
- Implemented Google Maps API to track volunteer and trash pick-up routes
- Implemented Firebase Authentication for secure user management for a seamless login experience

Spotify Song History

- Developed a full-stack web application using Blazor and C# enabling users to search and filter through their complete Spotify song history
- Designed and implemented Azure Cosmos DB integration with MongoDB to efficiently store and query song data
- Deployed an automated Google Cloud Function with 2 hour intervals to continuously sync recently played songs

Skills

Languages: Java, C/C++, C#, Typescript, Python, SQL

Frameworks/Libraries: React, Redux, RTK Query, Spring, Blazor, React Native

Tools/Platforms: Git, Azure, Docker, Firebase, Google Cloud Platform

Databases: PostgreSQL, MongoDB, Azure Cosmos DB
