SUMMARY

Results-driven Full-Stack Software Engineer with 2+ years of experience delivering high-performance, scalable web applications and cloud-native solutions. Proficient in Java, Spring Boot, React.js, AngularJS, and modern DevOps tools including AWS, Docker, Kubernetes, and Jenkins. Reduced deployment time by 40% by automating CI/CD pipelines and infrastructure provisioning. Improved API response times by 30% through optimized query handling and load-balanced microservices. Enhanced system uptime to 99.9% via resilient cloud deployments using EC2, RDS, S3, and Lambda. Cut bug rates by 50% using test-driven development practices with JUnit, Postman, and Mockito. Skilled in integrating REST/SOAP APIs, designing microservices architectures, and managing both SQL and NoSQL databases (MySQL, PostgreSQL, MongoDB). Proven track record of delivering clean, maintainable code in Agile teams and collaborating across disciplines to launch products with real-world impact. Passionate about solving meaningful problems through technology and continuously optimizing software delivery pipelines to drive business value.

EDUCATION

Masters in Computer Science: Software Engineering
Concordia University Wisconsin, Mequon

Aug 2023 - May 2025
GPA 3.63

Bachelors in Engineering: Electronics and Communication Engineering
Osmania University, Hyderabad

Jul 2017 - Aug 2021

SKILLS

Programming Languages: JavaScript, Python, Java, TypeScript

Database & Web Technologies: React.js, AngularJS, Node.js, MySQL, PostgreSQL, MongoDB, Django, HTML 5, CSS, Bootstrap

Server-Side Technologies: Servlets, Tomcat, JDBC, Hibernate, Spring MVC

API & Integration: RESTful APIs, SOAP, OAuth2, JWT, Swagger

DevOps Tools and Technologies: Docker, Kubernetes, AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM), Jenkins, GitHub Actions, Maven, Terraform

Version Control: Git, GitHub

Testing Tools and Frameworks: Jasmine, Karma, Mockito, JUnit, JaCoCo, Postman

WORK EXPERIENCE

Data Engineer Intern

Oct 2024 - Nov 2024

Blockhouse | New York

- Facilitated Agile workflows including daily stand-ups, sprint planning, and retrospectives using JIRA and Confluence, aligning cross-functional teams for on-time sprint delivery.
- Authored and maintained detailed technical documentation—including architecture diagrams, API contracts, and coding standards—reducing developer onboarding time by 40%.
- Designed and optimized RESTful APIs using Java, Spring Boot, and Hibernate, improving backend performance and reducing response time by 25%.
- Developed interactive, reusable UI components in React.js and Angular, leveraging responsive design and REST integration to reduce page load time by 20%.
- Deployed ML models to AWS SageMaker, using Python for preprocessing and packaging, which reduced model deployment cycles by 30%.
- Automated CI/CD pipelines via Jenkins, GitHub Actions, and Docker, integrating testing and static analysis to cut manual efforts by 40%.
- Implemented infrastructure monitoring with AWS CloudWatch, EC2 Auto Scaling, and Lambda, decreasing system downtime by 20% while supporting SLA compliance.

Assistant System Engineer

Nov 2021 - Jul 2023

Tata Consultancy Services Limited | Hyderabad, India

- Developed and integrated secure RESTful and SOAP APIs using Spring Boot, implementing OAuth2 and role-based access—reduced data retrieval latency by 15% and improved system interoperability.
- Designed a microservices architecture with Spring Cloud, Docker, and Kubernetes, enhancing scalability by 50% and enabling independent feature rollouts.
- Automated financial and operational reporting with SQL, Jasper Reports, and PostgreSQL, cutting manual effort by 30% and enabling real-time insights via job scheduling.
- Led migration of legacy systems to Spring MVC and Hibernate, refactoring inefficient code and optimizing SQL, which reduced operational costs by 25%.
- Collaborated with frontend teams to ensure seamless integration with React and Angular, reducing UI-side load errors and improving responsiveness.
- Managed multi-environment deployments using Jenkins, Git, and Maven, ensuring reliable releases with rollback and recovery strategies.

Java Full-stack Developer Trainee

Jul 2021 - Oct 2021

Revature | Chennai, India

- Designed and built a console-based e-commerce application using Java, JDBC, and MySQL, implementing modules for order processing, inventory management, and transactions—improved backend efficiency by 20% through algorithmic optimization and indexing.
- Acted as Scrum Master in an Agile team of five, facilitating sprints, daily stand-ups, and retrospectives using JIRA, resulting in 100% on-time deliveries and sustained project momentum.
- Deployed a full-stack application on AWS, with Spring Boot powering the backend and React.js on the frontend—achieved 99.5% uptime and cut infrastructure costs by 15% through right-sizing and auto-scaling.
- Automated builds and deployments using GitHub Actions and Jenkins, enabling consistent release cycles with rollback capability and minimal manual intervention.
- Configured AWS IAM and VPC for secure access control and network segmentation, adhering to best practices in cloud infrastructure security.

PROJECTS

RevFoods - Modern Restaurant App

Sep 2021 - Oct 2021

- Automated 40% of core restaurant operations including order management, menu configuration, billing, and staff scheduling—built RESTful APIs using Spring Boot and integrated them with an intuitive React.js frontend, significantly reducing manual workload and improving staff efficiency.
- Engineered a secure and centralized data architecture using MySQL hosted on AWS RDS, enforcing encryption, user role management, and daily backups—achieved 99.9% data accuracy and integrity, supporting real-time reporting and decision-making.
- Implemented end-to-end CI/CD pipelines using Jenkins, Dockerized services, and automated test, build, and release workflows across dev and production environments, reducing deployment time by 30%.
- Tested over 200+ unit and integration tests using JUnit for backend validation and Postman for API testing, ensuring application reliability and performance with fewer production issues and streamlined QA handoffs.
- Collaborated with a cross-functional team of designers, QA, and DevOps engineers in an Agile environment; participated in sprint planning, daily stand-ups, and retrospectives to ensure on-time feature delivery and continuous improvement.

Console-Based Shopping Application

Aug 2021 - Sep 2021

- Designed and implemented optimized backend workflows in Spring Boot, leveraging multithreading for concurrent processing and efficient queue handling, reducing order processing time by 20%.
- Managed an inventory system handling 1,000+ product records with automated stock level updates, CRUD operations, and low-stock alerts using MySQL, enhancing operational accuracy and system reliability.
- Designed and implemented user-centric features such as product search with filters, order history tracking, and dynamic cart updates—improving navigation efficiency and overall user experience in a command-line environment.
- Conducted 100+ unit tests using JUnit to validate product catalog, cart, and order modules—ensured high test coverage and minimized post-deployment issues, contributing to stable releases and easy future enhancements.
- Enhanced code maintainability, readability, and scalability by following object-oriented design principles and SOLID patterns.

CERTIFICATIONS

Machine Learning using Python

May 2020 - Jun 2020

Internshala

- Completed a certified training program on Machine Learning using Python, covering foundational and applied ML techniques.
- Gained hands-on experience in data preprocessing, model building, evaluation, and deployment using tools like NumPy, pandas, scikit-learn, and matplotlib.
- Built multiple supervised and unsupervised learning models and deployed projects using real-world datasets.
