

Pranjal T.

Data Analyst

Chicago, IL | pranjalt2410@gmail.com | +1 (913) 238-7365 | <https://www.linkedin.com/in/pranjal124/>

SUMMARY

Data Analyst with 4+ years of experience in building data-driven solutions for global organizations. Skilled in SQL, Python, R, dbt, Excel (formulas, pivots, Power Query, Power Pivot, VBA), and BI tools (Power BI, Tableau) to deliver actionable insights. Experienced with cloud platforms (GCP: BigQuery, Dataflow; AWS: S3, Glue, Redshift) for real-time ETL pipelines, forecasting, predictive analytics, and KPI tracking. Adept at translating business requirements into BRDs/FRDs, conducting A/B testing, and data storytelling to drive strategic decisions, optimize revenue, and improve operational efficiency.

PROFESSIONAL EXPERIENCE

Shopify Data Analyst	Chicago, IL Dec 2024 – Current
- Designed and optimized commerce data models in SQL, dbt, and AWS Redshift to track revenue, funnels, and KPIs, boosting dashboard performance and reporting accuracy by 40%. - Built and maintained real-time ETL pipelines and streaming workflows with SQL, Apache Kafka, and AWS (S3, Glue, Redshift), achieving <5-minute latency for merchant transaction analytics. - Automated data validation and anomaly detection in Python (Pandas, NumPy, Pytest) and Excel/VBA, ensuring 98.5% accuracy across finance, product, and marketing reports. - Developed and deployed interactive dashboards in Power BI and Tableau, enabling executives to track customer segmentation, revenue drivers, and product performance. - Conducted funnel, campaign ROI, and customer behavior analysis that reduced cart abandonment by 12%, increased upsell revenue by 15%, and improved marketing ROI by 20%. - Built forecasting and predictive analytics models in Python and Excel (Power Query, Power Pivot), improving demand planning and reducing inventory imbalance by 15%. - Translated requirements into BRDs, FRDs, and user stories using JIRA/Confluence in Agile sprints, ensuring analytics aligned with business strategy. - Created workflow diagrams and BPMN models in Lucidchart/Visio, standardizing reporting processes and reducing manual effort. - Supported AI-powered analytics (Shopify Sidekick) by preparing training datasets and fine-tuning prompts, accelerating data-driven decision-making. - Delivered data-driven recommendations, business impact analysis, and UAT support to finance, marketing, and product teams, strengthening strategic planning and resource allocation.	

Goldman Sachs Data Analyst	India July 2019 – June 2023
- Integrated financial and operational data from Snowflake, SQL Server, Excel, and AWS S3/Redshift, ensuring reliable and standardized datasets for analysis and reducing data reconciliation time by 25%. - Automated ETL workflows using Python, Alteryx, and AWS Glue, reducing manual effort by 40% and improving overall data quality. - Cleaned, merged, and standardized data using SQL, R, and Python (Pandas, NumPy) to enable faster fraud detection and deeper insights, improving anomaly detection accuracy by 20%. - Developed predictive models and performed exploratory analyses in R and Python for churn forecasting, fraud monitoring, and revenue trend analysis, helping teams proactively mitigate risks and optimize revenue. - Built and maintained interactive Power BI dashboards to track KPIs such as fraud alerts, transaction anomalies, and product performance, reducing reporting delays by 30% for stakeholders. - Conducted A/B testing to measure the impact of marketing strategies, pricing adjustments, and new features, delivering actionable recommendations that improved customer conversion by 12%. - Implemented data governance practices, including encryption, audit logging, and role-based access controls, ensuring compliance with SOX, SOC 2, and internal policies while increasing audit efficiency by 15%. - Built Excel-based financial models using Power Query, Solver, VBA, XLOOKUP, and array formulas to support operational decision-making and forecasting, improving forecasting accuracy by 18%. - Partnered with finance, compliance, and product teams using JIRA and Confluence to document data workflows, align on priorities, and standardize reporting processes, enhancing cross-team collaboration by 20%. - Presented insights through data storytelling, translating complex datasets into actionable narratives that highlighted risks, revenue shifts, and operational bottlenecks, accelerating decision-making for senior stakeholders by 25%.	

TECHNICAL SKILLS

Data Analytics & BI Tools: SQL, Python (Pandas, NumPy, Scikit-learn, Pytest), R, dbt, Google BigQuery (GCP), Snowflake, AWS Redshift, Excel (formulas, pivots, Power Query, Power Pivot, VBA), Power BI, Tableau, Mode Analytics, Amplitude, Jupyter Notebooks, KPI Tracking, Status Reporting

Cloud & Data Engineering Platforms: Google Cloud Platform (BigQuery, Dataflow), Amazon Web Services (S3, Glue, Redshift), Microsoft Azure (Data Factory), Apache Kafka, Apache Beam, Real-time ETL Pipelines, CI/CD (GitHub Actions, Bitbucket Pipelines),

Git

AI, Automation & NLP: LangChain, OpenAI APIs, NLP-to-SQL, Prompt Engineering, Fuzzy Matching (FuzzyWuzzy), Python Automation (Jupyter, Pytest), ML-based Data Matching

Data Quality & Governance: Data Validation, Anomaly Detection, Schema Version Control, Metadata Tagging, Audit Trails, Dimensional Modeling, Data Warehousing, Regulatory Compliance (SOX, SOC 2), Data Governance Frameworks

Reporting & Business Analytics: KPI Reporting, Conversion Funnel Analysis, Checkout Funnel Analysis, Campaign ROI Analysis, A/B Testing, Forecasting & Predictive Analytics, Interactive Dashboards, Self-Serve Reporting, Data Storytelling, Strategic Insights Delivery

Process & Collaboration: Business Requirements Gathering, BRDs/FRDs, User Story Mapping, Stakeholder Engagement, Agile Ceremonies, Cross-Functional Collaboration, Analytical Thinking, Problem Solving, Process Improvement, Workflow Diagrams, BPMN Modeling, Innovation Focus

EDUCATION

Master Of Science in Computer Science	2023 – 2025
University of Central Missouri, USA
