EDUCATION

Master of Science, Computer Science
University of Massachusetts Amherst

Sept. 2023 – May 2025
CGPA: 3.9/4.0

Relevant Courses: Advanced Algorithms, Network and Security, Software Engineering, Machine Learning, Distributed and Operating System, Secure and Distributed Systems, Ethical Computing, Applied Statistics

Bachelor of Technology, Electronics and Communication Engineering
Vellore Institute of Technology (VIT), Vellore, India

July 2016 - June 2020
CGPA: 8.8/10

Courses: Data Structures & Algorithms, Digital Logic & Design, Operating Systems, Database Systems, OOPS, Computer Architecture

SKILLS

Programming Language : C++ (Smartpointer, Threadpool), JavaScript, jQuery, Ruby, TypeScript, Python (Threading, Asyncio)

Frameworks : React.js, Node.js, SpringBoot

CI/CD : Git, Bitbucket

Database : MySQL, SQL Server, MongoDB, PostgreSQL

Cloud : AWS, Docker, Kubernetes

Others Tools : Linux, Shell, Postman, Redis, RabbitMQ, Kafka, Rest API, Graph QL, gRPC

WORK EXPERIENCE

Schneider Electric | Senior Software Engineer

Aug 2020 - July 2023

- Developed a comprehensive HR and onboarding web app that serves as centralized solution for over 100k end users, including features like live ticket status tracking system, push notifications and data dashboards using **React.js**, **Node.js** and **MongoDB**.
- Achieved 15% reduction in application support hours by engineering integration based automation solutions, API calls (Active Directory, ARM, JDBC SQL Servers) and backend event handlers to enhance the end user and vendor IT portal using **Ruby** and **SQL**.
- Led Migration of over 10 existing code bases with external handshakes, successfully upgrading from **LDAP** to **LDAPS** protocols, improving security and compatibility for Active Directory integrations across the platform.
- Managed the frontend development of the **JavaScript** driven IT portal and integrated with third party services such as Ping and Yammer using **REST** and **SOAP** Web APIs.
- Implemented multiple reusable widgets that facilitate retrieval of customer and platform data, along with setting up platform wide APIs for consumption in a newly implemented ServiceNow portal using **Angular.js**, **TypeScript** and **REST**.
- Contributed to an internal platform team by reviewing potential vulnerabilities, security and system performance while working with senior engineers and architects, refactoring 20+ unused URLs and open internal APIs using **Node.js** and **Mongo DB**.
- Implemented a global Trust IT webpage for companywide live critical issue tracking and escalation platform using **React.js**, **Node.js**, **REST** and **SQL**.
- Streamlined manual error handling tasks for application support teams by initiating and developing an automation project, resulting an 18% reduction in manual effort using **Python** and **Selenium**.

Schneider Electric | Software Engineering Intern

Jan 2020 – June 2020

- Enhanced the User Interface of the IT user portal used by over 80000 end users and introduced the new feedback collection feature and dashboard using **JavaScript**, **Ruby** and **SQL**.
- Resulted a 35% increase in company feedback engagement by implementing feature to list and categorize pending and completed feedback for end users' requests, developing a user-friendly interface that organized entries by status and pagination.
- Leveraged queries to design visual boards, enabling the extraction of customized real time data from the database to meet end-user requirements using **SQL** and **Power BI**.

PROJECTS

The Toy Store

Dec 2024

- Engineered a distributed ecommerce microservices system in **Python** with **REST APIs**, **gRPC** communication and **Docker** containerization, implementing custom thread pools, concurrent request handling and persistent data storage across services.
- Designed fault tolerant distributed architecture featuring **LRU** caching, **leader election** protocols, **replica management** with crash failure recovery and performance optimization under varying client loads, deployed on **AWS**.

Patient Tracker App

May 2024

- Designed a patient information and appointment tracker app using **React.js** and components, offering personalized login and individual doctor and patient views.
- Built scalable backend system leveraging **Java**, **Spring Boot** and **PostgreSQL** building secure auth, designing **REST APIs** and database management with CRUD operations and transaction handling

Chat Web App

Dec 2023

- Developed an intuitive real time web chat application using **Node.js** as the backend renderer, implementing bidirectional messaging functionality with responsive user interface and **message synchronization** across connected clients.
- Implemented real time communication using **Socket.io** WebSocket capability, building interactive chatrooms with multi user support and message broadcasting capabilities to enhance overall user experience and engagement.
