

Prapul Nanjala | Business Data Analyst

✉ prapulnanjala368@gmail.com | ☎ +1 256 910 8976 | 📍 Huntsville, AL | LinkedIn

Professional Summary

With 4+ years of experience in designing and delivering scalable data solutions across healthcare and financial domains. Proficient in leveraging Python (NumPy, pandas, scikit-learn), SQL, Power BI, and Tableau to perform advanced analytics, build ETL pipelines, and create dynamic dashboards. Skilled in data modeling, predictive analytics, and machine learning techniques, with a proven track record of optimizing supply chains, increasing business performance, and reducing operational inefficiencies. Experienced in working with cloud platforms like GCP, AWS, and Snowflake. Adept at collaborating with cross-functional teams to drive data-driven decisions and strategic initiatives. Seeking to contribute analytical expertise and technical skills to a forward-thinking organization.

Technical Skills

- **Languages & Scripting:** Python (NumPy, Pandas, SciPy, Matplotlib, Seaborn, Scikit-learn), R, SQL, NoSQL, Bash, HTML, CSS, DAX, MATLAB, SAS
- **Data Engineering:** ETL Pipelines, Data Wrangling, Data Modeling, BigQuery, Airflow, Spark, Hadoop, Kafka, Databricks, Snowflake, MySQL, PostgreSQL, MongoDB, Redshift, Oracle, SparkSQL
- **Analytics & BI:** Power BI, Tableau, Looker, Google Data Studio, MS Excel (Advanced), Google Analytics, A/B Testing, KPI Definition, Forecasting, Predictive Modeling
- **Statistical Modeling:** Regression, Clustering, NLP (SpaCy, NLTK), TensorFlow, Keras, PyTorch, Transfer Learning, Reinforcement Learning, Statsmodels
- **Cloud Platforms:** GCP (BigQuery, Dataflow), AWS (S3, Lambda, EC2), Azure
- **Tools & DevOps:** Git, GitHub, Docker, Jenkins, CI/CD Pipelines, Flask, Django
- **Compliance & Documentation:** HIPAA, Data QA, Audit Readiness, Data Governance, Version Control
- **Methodologies & Soft Skills:** Agile, Scrum, Sprint Planning, Stakeholder Engagement, Communication, Critical Thinking, Problem Solving, Adaptability

Experience

Business Data Analyst, Rocket Mortgage, USA

March 2024 – Present

- Created strategic data analysis initiatives, leveraging advanced machine learning techniques such as regression and clustering to optimize financial metrics and drive a 25% boost in profitability and efficiency.
- Designed and implemented ETL (Extract, Transform, Load) pipelines using Python and SQL, ensuring seamless data integration and transformation for accurate and reliable reporting across 10,000 records.
- Utilized Power BI to create interactive and visually compelling dashboards, providing actionable insights and enabling informed decision-making for stakeholders through 15% increased data accuracy.
- Directed data quality management efforts, including data cleansing, validation, and anomaly detection, ensuring data accuracy and integrity across the organization through a 95% reduction in data errors.
- Collaborated with teams to develop and implement data-driven strategies, leveraging data analytics, predictive modeling, and statistical analysis techniques to drive a 12% increase in business performance and revenue growth.
- Stayed abreast of emerging technologies and industry trends, continuously improving data-driven decision-making processes through ongoing development and training, with a focus on machine learning and data visualization.

Business Data Analyst, Cardinal Health, India

Aug 2020 – July 2022

- Conducted ETL processes using NumPy and pandas within Power BI, processing large healthcare operations datasets (1M+ rows) to support advanced data visualizations and operational trend analysis.
- Optimized internal workflows by integrating and analyzing data from internal CRM systems and logistics platforms using Power BI, resulting in a 30% improvement in service efficiency.
- Implemented predictive models to identify supply chain bottlenecks with 95% accuracy, leading to a 25% reduction in inventory holding costs across distribution centers.
- Collaborated with cross-functional teams (logistics, procurement, operations) to translate complex data findings into actionable business recommendations.
- Built Excel-based dashboards and scenario models for leadership to drive data-driven decision-making on inventory planning, delivery schedules, and vendor performance.
- Presented insights through PowerPoint to key stakeholders, supporting strategic initiatives in supply chain optimization and healthcare product distribution.

- Crafted interactive dashboards using Tableau, Power BI to visualize Key Performance Indicators (KPIs) and banking trends, providing actionable insights to leadership for strategic decision-making and operational improvements.
- Collaborated with Analysts, Project Managers, and the Data Warehouse team, utilizing agile methodologies to design Dimensional Models and create ER-Diagrams, optimizing data architecture and ensuring seamless data flow across systems, improving data accessibility by 30%.
- Streamlined employee feedback documentation using Power Automate to integrate MS Teams to Power BI to generate word clouds, saving HR 40 hrs./month and approximately \$40k annually, preventing manual work.
- Led a project to analyze supplier quality failures from SAP, identifying functional issues and reducing return rates by 9%.
- Conducted in-depth data quality investigations and performed root cause analysis (RCA) to identify issues, implementing targeted improvements based on operational assessments, self-driven analysis, and customer feedback.
- Actively participated in meetings and discussions with banking teams, offering expertise and guidance on data analysis, and collaborating with cross-functional teams using agile methodologies and tools like JIRA to deliver projects effectively.

Education

Master of Science in Business Analytics University of Alabama, Huntsville	08/2022 – 04/2024
Bachelors of Science in Computer Science Kakatiya University, warangal, India	07/2018 – 07/2021

Project

End-to-End YouTube Data Pipeline on AWS:

Tech Stack: AWS (Glue, Athena, Lambda, QuickSight), SQL, Airflow, Docker

- Directed and deployed a scalable AWS data pipeline leveraging Glue, Athena, Lambda, and QuickSight to process and analyze 10M+ YouTube records, driving data-driven decision-making.
- Systematized ETL workflows with Lambda-triggered Glue jobs and optimized schema partitioning by region/category, reducing query runtimes and enabling near real-time analytics.
- Achieved a 99.6% data accuracy rate and reduced reporting latency from 8 hours to under 10 minutes, boosting dashboard adoption by 40% across business stakeholders.

Data Integration and Reporting Pipeline using Snowflake:

Tech Stack: Airbyte, Snowflake, SQL, Tableau, Apache Spark

- Conducted and implemented a mechanized end-to-end data ingestion pipeline leveraging Airbyte to efficiently extract, load, and transform both structured and semi-structured insurance data into Snowflake Cloud, improving data availability and consistency.
- Performed comprehensive data transformation, cleaning, and curation using Spark to ensure alignment with reserving and claims analytics workflows, enabling accurate and timely insights for actuaries and analysts.
- Improved an interactive Tableau dashboard to visualize critical KPIs such as claim frequency, loss ratios, and reserve trends, empowering nontechnical stakeholders to easily monitor performance and make data-driven decisions.

Insurance Risk Pipeline & Power BI Dashboard:

Tech Stack: Azure Services, PowerBI (PowerQuery, DAX queries)

- Programmed a synthetic insurance dataset and computerized the ingestion workflow using Azure Data Factory, enabling seamless integration and orchestration of data pipelines within the Azure ecosystem.
- Leveraged Azure Data Lake Storage for efficient and secure storage of curated data, supporting scalable access and further analytics needs.
- Created a Power BI dashboard that visualizes key actuarial KPIs and claims analytics, aligned with corporate reserving goals, which supports risk managers and business stakeholders in monitoring insurance portfolio health and making informed decisions.
