

SAIPRASANNA

Software Developer

praas002@gmail.com

2168081205

Profile

Software Developer with 5 years of experience, strong programming skills and a deep passion for software development. I am passionate about AI, software development, and innovative product building. Proficient in Java, designing, coding, testing, and deploying software across all layers of the development lifecycle, Python, React, and cloud-native technologies. Strong problem-solving mindset with experience in microservices, REST APIs, and cloud deployments. Currently exploring AI/ML frameworks (TensorFlow, PyTorch, scikit-learn) to integrate intelligence into scalable applications. Thrives in startup environments, comfortable with ambiguous challenges, and eager to contribute to cutting-edge software solutions. I am eager to contribute my technical skills, adaptability, and commitment to excellence to drive innovation and achieve project success.

SKILLS

Programming Languages: Java, Python, C, JavaScript (ReactJS, Angular), HTML, CSS

Databases: MySQL, MongoDB, Cassandra, Oracle, Teradata

Development Tools: IntelliJ, Eclipse, Postman, REST Client

DevOps & CI/CD: Docker, Kubernetes, Jenkins, Maven, Ant

Cloud Platforms: AWS (EC2, S3, Lambda), GCP

Security: JWT, OAuth2, Spring Security

SDLC & Agile: Agile (Scrum), Waterfall, Git, SVN

ETL & Data Integration: AB Initio, Shell Scripting

EXPERIENCE

Software Developer

[AT&T, USA](#)

[Oct 2022- Present](#)

Responsibilities:

- Contributed to the development of a Spring Boot-based billing API platform supporting monthly invoicing, prorated adjustments, and multi-line mobile accounts, ensuring compliance with AT&T's financial reporting policies.
- Developed secure REST APIs for account creation, authentication, and multi-factor enrollment using OAuth2, Spring Security, and custom token workflows.

- Implemented JWT-based access control with refresh tokens and device-level validation, and built a supporting Angular-based admin UI for audit tracking and user management.
- Created dynamic Angular 9 web components that enabled support agents to search, filter, and manage tickets in an intuitive interface integrated with backend security layers.
- Wrote comprehensive unit and integration tests using JUnit and Mockito, validating service layers and exception flows to ensure robust backend functionality.
- Collaborated with QA and DevOps to set up CI/CD workflows in Jenkins and helped configure Docker-based environments for consistent testing across development and staging.
- Supported containerization efforts and deployment via Helm charts into Kubernetes, gaining experience with AT&T's internal deployment and monitoring tools.
- Participated in sprint planning and backlog grooming sessions with cross-functional teams to break down epics into technical tasks, estimate complexity, and prioritize deliverables based on evolving AT&T business requirements and production feedback loops.
- Integrated application monitoring and logging using ELK Stack (Elasticsearch, Logstash, Kibana) to visualize API usage trends, identify error hotspots, and provide actionable insights that helped reduce incident resolution times by over 30%.

Java Developer

VDP Technologies

July 2020 - Aug 2021

Responsibilities:

- Developed and maintained cross-platform applications using React Native and Flutter, ensuring seamless user experience across devices and improving app performance by 15%.
- Designed and tested RESTful APIs using Postman and REST Client, while implementing unit and integration tests with JUnit and Mockito, increasing test coverage to 85%.
- Built and automated front-end and back-end testing frameworks using Selenium and Cypress, reducing manual testing efforts by 40% and improving software reliability.
- Led Agile Scrum ceremonies, including sprint planning, standups, and retrospectives, boosting team velocity by 25%.
- Managed version control using Git, GitHub, and SVN, implementing branching strategies that streamlined the CI/CD pipeline and reduced code conflicts.
- Engineered Kafka-based messaging queues for asynchronous data processing, enhancing system scalability and reducing latency by 30%.
- Developed AI-powered REST APIs using Spring AI and OpenAI GPT models, integrating natural language processing (NLP) for intelligent chatbot functionalities, leading to a 20% increase in user engagement.
- Engineered and refined data pipelines, employing ETL tools including AB Initio to facilitate seamless data integration and workflow automation. Extensively used Oracle and Teradata to manage complex data systems.

Enterprise Java Developer

SRR IT Solutions, India

Aug 2019 -July 2020

Responsibilities:

- Developed and maintained APIs and worked extensively with Oracle and Teradata databases to manage and manipulate data.
- Designed responsive UI components with React.js and Angular, enhancing user engagement by 30%.
- Integrated JWT-based authentication and OAuth2 security with role-based access control (RBAC), strengthening application security and data protection.
- Optimized SQL queries and database performance for MySQL and MongoDB, reducing query execution time by 25%, leading to faster page loads.
- Deployed applications using AWS (EC2, S3, Lambda), implementing auto-scaling and fault tolerance, improving system reliability and availability.
- Set up CI/CD pipelines with Jenkins and Docker, reducing deployment time by 40%.
- Collaborated with cross-functional teams in Agile/Scrum environments to deliver high-quality solutions.
- Created and optimized data pipelines and implemented comprehensive ETL processes using best practices.
- Involved in all the phases of SDLC including requirements Collection, Design, Development and Customization of the application
- Implemented the backend using Java with Spring Boot, facilitating scalable microservices architecture. Used Hibernate for ORM and data handling with MySQL as the database. Developed RESTful services for data interaction between the frontend and backend

INTERN, NTPC India

May 2019-July 2019

Responsibilities:

- Designed and implemented RESTful APIs using Spring Boot for managing lecturer schedules, availability, and bookings.
- Developed services to handle CRUD operations for lecturer data, time slots, and appointment bookings.
- Implemented authentication and authorization mechanisms to ensure secure access to the application.
- Built MVC-based, event-driven web applications using AJAX, Object-Oriented JavaScript, and JSON, improving frontend-backend communication speed by 25%
- Wrote efficient SQL queries for data retrieval and manipulation.

- Implemented ETL (Extract, Transform, Load) processes to clean, transform, and load data into a centralized data warehouse.
- Upgraded UI screens to single-page applications (SPA) using Angular, Bootstrap, HTML, CSS, and JavaScript, reducing page load time
- Created and tested PL/SQL queries to extract data insights from relational databases.
- Prioritized multiple tasks and met deadlines in a fast-paced, dynamic environment.

Projects:

- Developed a comprehensive salon booking application using Java to streamline appointment scheduling, manage customer data, and improve operational efficiency.
- Utilized Java, JDBC for database interactions, and Swing for the graphical user interface to create a user-friendly and responsive application.
- Designed and implemented a relational database system using MySQL to handle data storage, retrieval, and manipulation, ensuring robust data integrity and security.
- Addressed and resolved key challenges such as handling concurrent bookings and maintaining data consistency across the platform.
- Successfully deployed the application, resulting in a 25% increase in booking efficiency and significantly improved customer satisfaction with the salon.

Education Details:

🎓 **Master's in Computer and Information Systems** (2021 - 2023)

📍 Rivier University, USA

🎓 **Bachelor's in Computer Science and Engineering** (2016 - 2020)

📍 Malla Reddy Group of Institutions, India
