## OBJECTIVE

Results-driven Java Full Stack Developer with over **4+ years** of experience in designing, developing, and deploying scalable web applications. Proficient in Java, Spring Boot, Hibernate, Angular/React, and RESTful APIs, with a strong background in microservices architecture, cloud computing (AWS), and DevOps practices. Adept at building high-performance applications, optimizing backend services, and enhancing user experience through responsive frontend development.

## PROFILE SUMMARY

---

- **4+ years of experience** in developing and deploying full-stack web applications using **Java, Spring Boot, and ReactJS**. Proven expertise in building scalable, high-performance applications that meet business and technical requirements.
- Strong proficiency in **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, and jQuery** for developing responsive and interactive UI. Experienced in designing user-friendly web interfaces that enhance customer engagement.
- Skilled in backend development using **J2EE, JSP, JSTL, EJB, Servlets, JAX-RS, JDBC, and JMS** to build robust application logic. Adept at implementing enterprise-grade backend solutions with secure and optimized data handling.
- Strong expertise in building **cloud-native applications** and microservices, deploying and managing services on **Microsoft Azure**.
- Extensive experience with **Spring MVC, Spring Security, Spring Boot, JPA, Hibernate, Spring JDBC, and Spring Data JPA** for scalable and secure backend applications. Capable of developing microservices-based architectures.
- Proficient in designing and consuming **RESTful APIs**, integrating **JSON, XML, AJAX**, and working with web services. Well-versed in handling API authentication, request validation, and optimizing network performance.
- Hands-on expertise in **NodeJS and Express** for developing backend services and APIs. Experienced in implementing middleware, routing, and database connectivity for real-time applications.
- Strong database management skills with **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, and DynamoDB**. Well-versed in writing optimized SQL queries, managing indexing strategies, and working with NoSQL databases.
- Expertise in **CI/CD pipelines** using tools like **Maven, Gradle, and Apache** for build automation and deployment. Skilled in integrating version control systems such as Git and working with Jenkins for continuous integration and deployment.
- Strong proficiency in **JUnit and Mockito** for unit testing and ensuring high code quality. Familiar with test-driven development (TDD) and behavioural-driven development (BDD) methodologies to improve software reliability.
- Experienced in using AI-powered code assistants like **GitHub Copilot** and **Vibe Coding** to accelerate development, improve code quality, and enhance productivity across frontend and backend projects.
- Experience in working with **Docker and Kubernetes** for managing containerized applications in cloud environments. Proficient in writing Docker files, configuring Kubernetes clusters, and automating deployments with Helm charts.

## TECHNICAL SKILLS

---

**Frontend Development:** HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, ReactJS, NodeJS, Express, Responsive Web Design, Single Page Application (SPA), DOM manipulation, AJAX, RESTful APIs, JSON, Angular, XML, and WebSocket

**Backend Development:** Java, J2EE, Spring MVC, Spring Boot, Multithreading, Spring Security, Spring Data JPA, Spring Data REST, EJB, JSP, JSTL, JAX-RS, JDBC, JMS, JNDI, Servlets, Custom Tag Libraries, Log4j, Apache

**AWS:** EC2, S3, RDS, Lambda, CloudFormation, IAM, SNS/SQS, CloudWatch

**Database Technologies:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, JPA, Hibernate, Spring JDBC

**Version Control and Build Tools:** Git, SVN, Maven, Gradle, GitHub Copilot, Vibe coding

**Testing and Frameworks:** JUnit, Mockito, TestNG, Selenium, Unit Testing, Integration Testing, Test-Driven Development, Behaviour Driven Development

**Microservices and Architecture:** Microservices architecture, Docker, Kubernetes, API Gateway, Circuit Breaker, Monolith to Microservices Migration

## WORK EXPERIENCE:

---

**Client:** CVS Health, USA (Contract)

**Sep 2024 - Present**

**Role:** Java Full Stack Developer

**Responsibilities:**

- Designed, developed, and optimized **secure, scalable, and high-performance** banking applications using **Java, J2EE, Spring Boot, and Hibernate**. Ensured compliance with financial regulations and security best practices
- Built responsive and interactive user interfaces using **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, ReactJS, and jQuery**. Developed RESTful APIs and microservices using **Spring Boot, JAX-RS, Servlets, and JSP** to handle financial transactions and data processing.
- Leveraged **GitHub Copilot** and **Vibe AI coding** assistants during **Spring Boot** and **ReactJS** development to auto-generate boilerplate code, improving development speed by **30%** and reducing manual errors in service-layer logic.
- Implemented role-based access control and user authentication using **Spring Security** for secure financial transactions. Managed encryption and data protection policies to ensure **PCI-DSS compliance**.
- Integrated banking services with external financial systems using **RESTful APIs, SOAP, and JSON-based web services**. Developed reusable **Spring Data REST components** to expose banking data securely.
- Deployed banking applications on **Azure** using cloud-native services and infrastructure-as-code. Configured **CI/CD** pipelines using **Maven, Gradle, Jenkins, and GitHub Actions** for automated deployments.
- Used **Copilot** to auto-suggest React component structures, **API** integration code, and form validation logic, significantly speeding up frontend delivery for responsive **banking dashboards and healthcare portals**.
- Developed and maintained microservices-based banking solutions using **Spring Boot, Spring Cloud, and Docker**. Integrated with event-driven architectures using **Kafka and RabbitMQ**.
- Ensured that banking applications adhere to **SOX, GDPR, and PCI-DSS** security standards. Conducted vulnerability assessments and code reviews to mitigate risks and security threats.
- Worked in Agile teams using **Scrum and Kanban** methodologies for continuous delivery of banking features. Collaborated with business analysts, testers, and DevOps teams to ensure seamless deployment of banking solutions.

**Environment:** Java, Spring Boot, ReactJS, NodeJS, Express, Hibernate, JPA, PostgreSQL, MongoDB, Cassandra, DynamoDB, Copilot, Vibe coding, Oracle, MySQL, Azure, Docker, Kubernetes, Jenkins, Maven, Gradle, Git, CI/CD, Kafka, RabbitMQ, Log4j, JUnit, Mockito.

**Client:** IBM, India

**July 2021 – June 2023**

**Role:** Java Full Stack Developer

**Responsibilities:**

- Developed end-to-end healthcare applications using **Java, J2EE, Spring Boot, and Hibernate**, ensuring compliance with **HIPAA** and industry regulations. Built robust back-end services to handle patient data, medical billing.
- Designed dynamic and responsive user interfaces using **HTML5, CSS3, Bootstrap, JavaScript, TypeScript, ReactJS, and jQuery** to improve patient and provider interactions. Ensured cross-browser compatibility and accessibility.
- Built and maintained **RESTful and SOAP-based APIs** using **Spring Boot, JAX-RS, and Servlets**, enabling seamless data exchange between healthcare providers, insurance companies, and third-party applications. Integrated **EJB, JMS and JNDI**.
- Integrated **Copilot** into **VS Code IDE** for developing microservices in Java and NodeJS, enabling faster implementation of **REST** endpoints, exception handling blocks, and test cases using **JUnit and Mockito**.
- Worked with **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, and DynamoDB** to store and manage sensitive healthcare data. Optimized database performance using **Spring JDBC, JPA, and Hibernate** to ensure fast.
- Implemented **Spring Security and OAuth authentication** to enforce strict access control over **electronic health records (EHR)**. Configured role-based access permissions to ensure compliance with data privacy laws and regulatory standards.
- Developed **AWS Lambda-based** serverless applications for real-time healthcare data processing and analytics. Integrated **AWS services** such as **API Gateway, S3, and DynamoDB** to enhance cloud-based healthcare solutions.
- Implemented event-driven architectures using **Apache Kafka** to enable real-time processing of patient data, medical alerts, and healthcare transactions. Configured **Log4j** for centralized logging and proactive monitoring.
- Enhanced developer productivity by adopting **AI-assisted code** refactoring using **Vibe Coding** tools to optimize legacy **Spring MVC and Hibernate modules**, reducing code complexity and improving readability.
- Performed extensive unit, integration, and regression testing using **JUnit and Mockito** to verify application stability.

Adopted **test-driven development (TDD)** methodologies to enhance software quality and reduce production issues.

- Collaborated with cross-functional teams in an **Agile and Scrum-based** development environment, working closely with healthcare professionals, business analysts, and DevOps engineers. Participated in sprint planning, daily stand-ups, and retrospective meetings to ensure timely project delivery.

**Environment:** Java, Spring Boot, ReactJS, NodeJS, Express, Hibernate, JPA, SQL, PostgreSQL, MongoDB, DynamoDB, AWS, AWS Lambda, Docker, Kubernetes, Jenkins, Git, CI/CD, Apache Kafka, Log4j, OAuth, FHIR, HL7. GitHub Copilot, Vibe coding.

**Client:** Gravity Engineering Services

**June 2020 – May 2021**

**Role:** Java Intern

**Responsibilities:**

- Designed and implemented microservices architecture using **Spring Boot, Hibernate, and JPA**, ensuring high scalability and efficiency in managing Zara's e-commerce and inventory systems.
- Utilized **AI pair-programming** features from **GitHub Copilot** to draft **Dockerfiles, Kubernetes YAML manifests, and CI/CD scripts**, ensuring rapid deployment and consistency across staging and production environments.
- Built dynamic and responsive UI components using **ReactJS, JavaScript, TypeScript, Bootstrap, and jQuery**, enhancing user experience across web and mobile platforms. Ensured cross-browser compatibility and optimized front-end.
- Developed RESTful APIs using **Spring MVC, JAX-RS, and Express.js** to facilitate seamless communication between different retail applications. Integrated APIs with third-party payment gateways and logistics providers for efficient order.
- Designed and optimized databases using **PostgreSQL, Oracle, MongoDB, and DynamoDB**, ensuring high availability, faster query execution, and data consistency. Implemented database indexing, partitioning, and caching strategies.
- Leveraged **AWS Lambda, EC2, and S3** to deploy cloud-native applications, enabling cost-effective and scalable retail operations. Implemented auto-scaling and load balancing strategies to manage traffic spikes during peak shopping.
- Automated build, test, and deployment processes using **Jenkins, Docker, Kubernetes, and Git**, reducing deployment errors and increasing development efficiency. Set up CI/CD pipelines to ensure smooth and continuous integration.
- Collaborated with cross-functional teams in an **Agile/Scrum** environment to develop and deploy innovative retail solutions.
- Worked closely with UX designers, business analysts, and QA teams to enhance Zara's omnichannel shopping experience.

**Environment:** Spring Boot, ReactJS, Hibernate, JPA, PostgreSQL, MongoDB, DynamoDB, AWS Lambda, Jenkins, Docker, Kubernetes, Git, CI/CD, GitHub Copilot, Vibe coding, Apache Kafka, AWS Kinesis.

**Education:**

---

- Masters in Computer Science at University of Central Missouri
- Bachelors in Information Technology at JNTU, Hyderabad, India
