

PRASHANTH KUMAR SURA
Java Full Stack Developer / Angular Developer
Prashanthkumarsura743@gmail.com | +1(937)-972 3135

Professional Summary:

Highly accomplished **Java Full Stack Developer** with **7+ years of progressive experience** in designing, developing, and deploying enterprise-grade web applications using **Java, Spring Boot, ReactJS, Angular, and Microservices**. Adept at building scalable, secure, and high-performing solutions leveraging **RESTful APIs, CI/CD pipelines, and cloud-native architectures**. Proven track record of collaborating across product management, architecture, and DevOps teams to deliver business-critical applications in **healthcare, telecommunications, and pharmaceutical** industries. Skilled in implementing **Agile methodologies**, performing **code reviews**, and mentoring teams in **software design best practices**. Demonstrates a deep understanding of **object-oriented principles, responsive UI/UX development, and API-driven integration**. Known for strong analytical thinking, clean coding standards, and a relentless drive to improve application efficiency and maintainability. Passionate about adopting emerging technologies, promoting engineering excellence, and contributing to innovation through robust and maintainable codebases.

Technical Skills

Frontend Technologies: ReactJS, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Material UI, Redux, RxJS, RESTful APIs

Backend Technologies: Java, Spring, Spring Boot, Hibernate, Microservices Architecture, Maven, Gradle

Databases: Oracle, MySQL, PostgreSQL, MongoDB

Messaging & Integration: Kafka, MQ, Solace, REST, SOAP, JSON, XML

Version Control: Git, Bitbucket, GitHub

CI/CD & DevOps: Jenkins, Docker, Kubernetes, CI/CD Pipelines, SonarQube

Testing Frameworks: JUnit, Mockito, Postman, Selenium

Development Tools: IntelliJ IDEA, Eclipse, Visual Studio Code, Postman, JIRA, Confluence

Operating Systems: Linux, Unix, Windows

Methodologies: Agile Scrum, SDLC, TDD, BDD, Peer Code Review, Continuous Integration

Soft Skills: Strong communication, problem-solving, leadership, mentoring, teamwork, adaptability, and attention to detail

Professional Experience

Client: CVS Health, IL

Role: Java Full Stack Developer

Duration: Oct 2024 – Present

Project Description:

Working on a healthcare management platform that enables patients, pharmacies, and insurance providers to manage prescriptions, claims, and medical data in real time. The project emphasizes security, high availability, and scalable microservice-based architecture.

Responsibilities:

- Design and develop interactive UI components using **ReactJS, Redux, and TypeScript**, ensuring scalability and a seamless user experience across all platforms.
- Build and maintain **RESTful APIs** using **Java, Spring Boot, and Hibernate**, integrating them with front-end services and third-party systems.
- Participate in **Agile ceremonies**, sprint planning, and backlog grooming while collaborating with cross-functional teams to achieve sprint goals.
- Implement **JWT-based authentication and OAuth2** mechanisms to ensure secure data transmission across distributed services.
- Optimize application performance by profiling Java code, refactoring queries, and tuning database transactions for reduced latency.
- Develop **reusable UI components** aligned with company-wide design standards to accelerate feature delivery and maintain consistency.
- Deploy microservices on **Docker containers**, automating workflows using **Jenkins** for continuous integration and delivery.

- Integrate **Kafka-based messaging queues** to handle asynchronous communication and improve transaction throughput.
- Implement **unit and integration testing frameworks (JUnit, Mockito)** to achieve 90%+ code coverage and ensure production reliability.
- Work closely with **DevOps teams** to containerize services and deploy them on **Kubernetes clusters** within CVS Health's private cloud.
- Collaborate with **UX designers** to translate wireframes into functional, responsive UI modules with pixel-perfect precision.
- Contribute to **API documentation** using Swagger and maintain version control via **Git/Bitbucket**.
- Resolve production incidents promptly by conducting root cause analysis and implementing long-term solutions.
- Mentor junior developers in code structure, clean architecture, and performance optimization best practices.
- Participate in design discussions and contribute to architectural decisions that align with scalability and maintainability goals.

Client: Meeru AI, NC

Role: Java Developer

Duration: Jan 2024 – Sep 2024

Responsibilities:

- Designed and developed interactive, responsive financial dashboards using Angular 14 and Material UI for real-time reconciliation insights.
 - Implemented Angular Routing with lazy loading and route guards for secure and modular navigation between the dashboard and AI insight modules.
 - Built reusable services to manage API integration with Java Spring Boot backends, ensuring clean separation of logic and efficient HTTP communication.
 - Created custom pipes for currency formatting, percentage display, and dynamic filtering of financial data.
 - Developed dynamic, data-driven forms using Reactive Forms and Template-driven Forms for approval workflows and reconciliation inputs.
 - Implemented a chatbot interface using Angular components that allows finance users to ask natural-language questions such as "Why did expenses increase this quarter?" and receive AI-generated responses via backend APIs.
 - Applied one-way and two-way data binding (ngModel) for interactive data visualization and instant UI updates.
 - Utilized structural and attribute directives (ngIf, ngFor, ngClass, ngStyle) to manage conditional rendering and dynamic styling.
 - Integrated AI-powered APIs from Azure OpenAI to display machine-generated insights and recommendations within Angular components.
 - Implemented NgRx for global state management of large datasets, improving performance and consistency across modules.
 - Built full-stack applications using Java, Spring Boot, Angular, and PostgreSQL.
 - Used RxJS operators (map, switchMap, forkJoin) for handling asynchronous API calls and data streams efficiently.
 - Lazy loading, virtual scrolling, and change detection strategy (OnPush) were utilized to optimize performance.
 - Designed UI with HTML5, CSS3, and JavaScript integrated with backend services.
 - I worked closely with Java developers to ensure the alignment of API endpoints, authentication (JWT/OAuth2), and data exchange between the UI and backend.
 - I successfully integrated WebSocket to enable real-time AI analysis updates and a live reconciliation status refresh.
 - Built and deployed an Angular application on Azure Cloud using CI/CD pipelines, ensuring scalability and performance.
 - Delivered a user-friendly, accessible, and responsive UI with pixel-perfect design and financial data accuracy.
-

Client: Hetero Healthcare, India

Role: Angular Full Stack Developer

Duration: Feb 2020 – Aug 2022

Project Description:

Contributed to the development of an internal healthcare data management application that streamlined clinical workflows, reduced manual intervention, and improved patient record accessibility for multiple departments.

Responsibilities:

- Developed **Angular 10+ applications** with dynamic routing, lazy loading, and component reusability for enhanced modularity.
- Created **RESTful APIs** using **Spring Boot** and **Hibernate**, integrating with Oracle databases to manage patient records efficiently.
- Collaborated with UI/UX designers to enhance visual interfaces while ensuring cross-browser and mobile responsiveness.
- Implemented **Reactive Forms and Observables** for data binding and improved component communication.
- Conducted **unit and integration testing** using Karma, Jasmine, and JUnit to validate code reliability and functionality.
- Used **RxJS and NgRx** for state management and handled large-scale asynchronous data operations.
- Worked on **JWT authentication** and secure session management within Angular applications.
- Created and optimized **SQL queries** and indexes for improved performance and reduced response times.
- Deployed applications on **Tomcat servers**, automating builds using Maven and Jenkins.
- Wrote reusable directives and services to streamline development processes and reduce redundancy.
- Participated in Agile ceremonies, sprint reviews, and technical retrospectives to enhance delivery quality.
- Ensured **WCAG compliance** and accessible UI design for healthcare users and patients.
- Collaborated with backend teams to implement data validation and transformation logic.
- Maintained documentation for APIs, UI flows, and module dependencies to support ongoing maintenance.
- Trained new developers in Angular architecture, coding standards, and version control workflows.

Client: Unic Sol India Private Limited, India

Role: Software Developer

Duration: Jan 2017 – Jan 2020

Project Description:

Delivered multiple enterprise web applications focused on workflow automation, reporting, and customer engagement for small and mid-sized businesses. Played a key role in transitioning legacy systems to modern Java-based platforms.

Responsibilities:

- Designed and developed **MVC-based web applications** using **Java, JSP, Servlets, and Spring Framework**.
- Implemented **REST and SOAP-based web services** for seamless integration between legacy and modern applications.
- Built interactive UIs using **JavaScript, HTML5, CSS3**, and early versions of **AngularJS** to modernize user interfaces.
- Optimized database schemas and wrote **SQL queries, stored procedures, and triggers** in Oracle and MySQL.
- Deployed applications to **Apache Tomcat** environments and performed routine server maintenance.
- Applied **Agile and Waterfall methodologies**, ensuring timely project delivery and change management compliance.
- Created **logging and monitoring mechanisms** using Log4j and ELK Stack for real-time error tracking.
- Developed and maintained **data validation utilities** and **custom exception handling frameworks** to enhance code robustness.
- Collaborated with testers to define acceptance criteria and validate deliverables through regression testing.
- Integrated third-party APIs for payment gateways and reporting modules.
- Documented technical workflows, user manuals, and code review notes for internal and client use.
- Participated in **peer code reviews** and enforced consistent coding standards across modules.
- Refactored legacy applications into **Spring Boot microservices**, reducing maintenance overhead.

- Conducted **performance profiling** to identify memory leaks and optimize service response times.
- Provided **L3 support** for production issues, ensuring high availability and minimal downtime.

Education:

Bachelors in computer science from JNTUH in 2017

Master of Science in Computer Science — University of Illinois (2023)
