

SUMMARY

Backend Engineer with 4+ years of experience designing, developing, and deploying scalable backend systems, RESTful APIs, and cloud-native applications. Skilled in building high-performance microservices using Python (FastAPI, Django) and automating cloud deployments on AWS. Strong in CI/CD, containerization, and data integration pipelines using Airflow and Spark. Adept at collaborating with cross-functional teams to deliver reliable, secure, and optimized backend solutions in production environments.

SKILLS

- **Programming & Frameworks:** Python (FastAPI, Django, Flask), JavaScript (Node.js), SQL, Shell Scripting
- **API & Backend Development:** REST API design, AsyncIO, Pydantic, SQLAlchemy ORM, JWT/OAuth2, GraphQL
- **Cloud & Infrastructure:** AWS (Lambda, ECS, EC2, S3, RDS, CloudFormation, boto3), Azure (basic)
- **DevOps & Automation:** Docker, Kubernetes, Jenkins, GitHub Actions (YAML pipelines), Terraform, Serverless Framework
- **Data & ETL Pipelines:** Apache Airflow, Spark, Pandas, NumPy, AWS Glue
- **Testing & Monitoring:** pytest, unittest, Postman, Prometheus, Grafana, AWS CloudWatch
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Collaboration Tools:** Git, JIRA, Confluence, Agile/Scrum

EDUCATION

- Master's in Computer Science, Texas Tech University, TX

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Google Associate Cloud Engineer
- PCAP – Certified Associate in Python Programming

EXPERIENCE

Athena Healthcare Systems

Jan 2024 – Current

Python Developer

- Designed and implemented FastAPI-based microservices for patient data workflows, supporting real-time analytics and reporting.
- Developed ETL pipelines using Apache Airflow to integrate healthcare data from S3 and RDS, improving data processing speed by 35%.
- Automated infrastructure provisioning using AWS CloudFormation and boto3, enabling consistent and repeatable deployments.
- Built CI/CD pipelines using GitHub Actions (YAML) and Jenkins to automate testing and container deployments to AWS ECS.
- Enhanced API performance using async I/O and Redis caching, reducing latency by 28%.
- Implemented monitoring and alerting with Prometheus, Grafana, and AWS CloudWatch, improving system observability and uptime.
- Collaborated with product and QA teams to define API contracts and automate test coverage with pytest-asyncio.

Morgan Stanley

Jul 2020 – Jun 2023

Python Developer

- Developed and maintained Django-based APIs for financial data reporting and trade reconciliation, handling millions of records daily.
- Built Spark and Airflow-based ETL pipelines to load trade data into Snowflake and Redshift, reducing data processing time by 30%.
- Deployed fraud detection services as Flask microservices on AWS Lambda, integrated with internal dashboards for real-time monitoring.
- Automated infrastructure provisioning using Terraform, standardizing environment setup across development and production.
- Integrated Kafka-based data streaming for real-time trade alerts and anomaly detection.
- Implemented secure API authentication using JWT and audited access controls to ensure compliance with financial regulations.
