

Pratik Harlikar | Data analytics

Las Cruces, NM | (575) 312-7649 | Prateek7@nmsu.edu | [LinkedIn URL](#)

Summary:

Master's degree candidate in Data Analytics with a Mechanical Engineering background and expertise in data-driven decision-making, machine learning, and statistical analysis. Proven experience in solving complex problems and leading innovative projects through data analytics. Adept at collaborating with teams to derive actionable insights for operational efficiency and strategic planning.

Education:

- **New Mexico State University:**
Master's degree in data Analytics. | **GPA: 3.90 / 4.0** |
 - **Shivaji University:**
Bachelor of Engineering in Mechanical Engineering. | **GPA: 3.9 / 4.0** |
-

Skills:

- **Programming Languages:** Python, C
- **Database Management:** SQL
- **Data Visualization Tools:** Tableau, Power BI, R Studio
- **Machine Learning Techniques:** Predictive Analytics, Textual Analytics
- **Additional Tools & Technologies:** Microsoft Excel, CSS

Academic Experience:

- 1) **Graduate Assistantship: Dr. Henderson**
New Mexico State University, Department of TPAL

Teaching Assistantships:

- Supported lead teacher in daily classroom operations, including lesson preparation, activity setup, and student supervision.
- Delivered individualized and small-group instruction to reinforce learning and support diverse student needs.
- Assisted in behavior management by promoting positive classroom routines and redirecting student behavior as needed.
- Documented student progress and collaborated with the teaching team to support academic and developmental goals.

Research on Literacy:

- Analyzed large datasets on individuals who left high school before graduating, uncovering key demographic and socioeconomic patterns.
- Developed statistical models to assess the impact of early school dropouts on community literacy rates and education outcomes.
- Contributed to research aimed at shaping educational retention strategies and interventions to reduce dropout rates.

2) **Teaching assistantship: Dr. Baolong Bai**

New Mexico State University, Department of Applied Statistics, and International Business

- Assisted in undergraduate-level applied statistics courses, supporting instruction in probability, hypothesis testing, regression, and statistical software (e.g., R, SPSS).
- Held office hours and provided one-on-one tutoring to reinforce statistical concepts and assist with assignments.
- Graded exams, homework, and projects with attention to accuracy and academic standards.
- Collaborated with faculty to develop instructional materials and review data analysis examples for lectures.

Certification:

Entrepreneurial Lead – NSF I-Corps™ Program- *National Science Foundation, Spring 2025*

- Successfully completed the NSF I-Corps™ Great Plains cohort, an intensive program focused on customer discovery, lean startup methodology, and commercialization strategy for early-stage technology ventures.

Professional Experience:

1. Customer Churn Prediction Model:

Tools: Python, Pandas, Scikit-learn, Tableau

| **Aug 2023 - Dec 2023** |

- Developed a machine learning model to predict customer churn using a telecom dataset with over 7,000 records.
- Conducted data cleaning, exploratory data analysis (EDA), and feature engineering to enhance model accuracy.
- Trained multiple classification algorithms (Logistic Regression, Random Forest, XGBoost), achieving 87% accuracy with the final model.
- Visualized key churn indicators in Tableau dashboards, helping stakeholders identify high-risk customer segments.
- Delivered actionable recommendations that could reduce churn by 15%, improving customer retention and revenue predictability.

2. Predictive Analytics - Stock Price Prediction using AI.

Tools: Python (Scikit-learn, Pandas), Tableau, Microsoft Excel

| **Jan 2024 – May 2024** |

- Built models to predict stock prices with 90% accuracy, resulting in 15% revenue growth for clients.
- Cleaned and pre-processed data to reduce errors by 25%, improving the overall analysis.
- Utilized Tableau and Excel to create visual reports that supported stakeholder decision-making.

3. Textual Analytics - Impact of Russian Aggression.

Tools: Python, SQL, Pandas

| **Aug2024 – Dec 2024** |

- Developed algorithms to scrape and analyze data from news and social media, identifying a 25% rise in geopolitical conflicts.
- Improved data accuracy and reduced errors by integrating SQL queries and cleaning data from null values.

4. DATA ANALYST - DMG MORI:

Tools: Python, SQL, Microsoft Excel, Power BI.

| **Aug 2022 – May 2023** |

- Analyzed data on machine performance, driving optimization of manufacturing processes.
- Generated data insights that influenced strategic business decisions, increasing operational efficiency by 20%.
- Improved customer satisfaction by synthesizing post-sales feedback into actionable recommendations for product refinement.

5. ENTREPRENEURIAL LEAD - NSF I-CORPS PROGRAM: | JAN 2025 - MAY 2025 |

- Spearheaded the commercialization of an innovative privacy glass technology with hydrophobic and energy-efficient properties.
- Conducted customer discovery and market research to identify target markets, including architects, real estate developers, and healthcare facility managers.
- Collaborated with technical and industry mentors to mitigate technical and market risks, ensuring alignment with industry standards.
- Developed a strategic commercialization plan emphasizing sustainability, cost-effectiveness, and local economic impact in Southern New Mexico.
- Applied expertise in predictive and textual analytics to support product development and optimize go-to-market strategies.
