Senior Data Engineer

PROFESSIONAL SUMMARY

- Over 5+ years of experience in Data Engineer, including profound expertise and experience in traditional data engineering background with expertise in Apache Spark, PySpark, Kafka, Spark Streaming, Spark SQL, Hadoop, HDFS, Hive, Sqoop, Pig, MapReduce, Flume, Beam.
- Extensive experience in relational databases including Microsoft SQL Server, Teradata, Oracle, Postgress and No SQL Databases including MongoDB, HBase, Azure Cosmos DB, AWS DynamoDB, Cassandra.
- Experience with major cloud providers & cloud data engineering services including AWS, Azure, GCP & Databricks.
- Designed & orchestrated data processing layer & ETL pipelines using Airflow, Azure Data Factory, Oozie, Autosys, Cron & Control-M.
- Hands on experience with AWS services including EMR, EC2, Redshift, Glue, Lambda, SNS, SQS, CloudWatch, Kinesis, Step functions, Managed Airflow instances, Storage & Compute.
- Hands on experience with Azure services including Synapse, Azure Data Factory, Azure functions, EventHub, Stream Analytics, Key Vault, Storage & Compute.
- Hands on experience with GCP services including DataProc, VM, Big Query, Dataflow, Cloud functions, Pub/Sub, Composer, Secrets, Storage & Compute.
- Hands on experience with Databricks services including Notebooks, Delta Tables, SQL Endpoints, Unity Catalog, Secrets, Clusters.
- Experienced in fact dimensional modeling (Star schema, Snowflake schema), transactional modeling and SCD (Slowly changing dimension)
- Hands on experience in MS SQL Server with Business Intelligence in SQL Server Integration Services (SSIS), SQL Server Analysis Services (SSAS), SQL Server Reporting Services (SSRS).
- Experience in Data Governance & Master Data Management through Collibra & Informatica. Standardization to improve Master Data Management (MDM) and other common data management issues.
- Strong expertise in working with multiple databases, including DB2, Oracle, SQL Server, Netezza, and Cassandra, for data storage and retrieval in ETL workflows.
- Experienced in working with ETL tools such as Informatica, DataStage, or SSIS (SQL Server Integration Services).
- Good knowledge in Database Creation and maintenance of physical data models with Oracle, Teradata, Netezza, DB2, MongoDB, HBase and SQL Server databases.
- Experienced in writing complex SQL Quieres like Stored Procedures, triggers, joints, and Sub queries.
- Interpret problems and provides solutions to business problems using data analysis, data mining, optimization tools, and machine learning techniques and statistics.
- Extensive experience in development of Bash scripting, TSQL, and PL/SQL scripts
- Understanding of structured data sets, data pipelines, ETL tools, data reduction, transformation and aggregation technique, Knowledge of tools such as DBT, DataStage.
- Excellent performance in building, publishing customized interactive reports and dashboards with customized parameters including producing tables, graphs, listings using various procedures and tools such as Tableau, PowerBI and user-filters using Tableau.
- Practical understanding of the Data modeling (Dimensional & Relational) concepts like Star-Schema Modeling, Snowflake Schema Modeling, Fact and Dimension tables.

TECHNICAL SKILLS

Big Data Technologies	Hadoop, MapReduce, Spark, HDFS, Sqoop, YARN, Oozie, Hive, Impala, Zookeeper, Apache Flume, Apache Airflow, Cloudera, HBase
Programming Languages	Python, PL/SQL, SQL, Scala, C, C#, C++, T-SQL, Power Shell Scripting, JavaScript, Perl script.
Cloud Technologies	AWS, Microsoft Azure, GCP, Databricks, Snowflake
Cloud Services	Azure Data Lake Storage Gen 2, Azure Data Factory, Blob storage, Azure SQL DB, Databricks, Azure Event Hubs, AWS RDS, Amazon SQS, Amazon S3, AWS EMR, Lambda, AWS SNS, Data Flow, Big Query, VM, Delta Tables, Cloud functions, Clusters.
Databases	MySQL, SQL Server, IBM DB2, Postgres, Oracle, MS Access, Teradata, and Snowflake
NoSQL Data Bases	MongoDB, Cassandra DB, HBase
ETL, Visualization & Reporting	Tableau, Data Stage, Informatica, Talend, SSIS, and SSRS
Frameworks	Django, Pandas, NumPy, Matplot Lib, TensorFlow, PyTorch
Version Control & Containerization tools	Jenkins, Git, CircleCI and SVN
Monitoring tool	Apache Airflow, Control M

PROFESSIONAL EXPERIENCE

Client: Fifth Third Bank

(Jul 2024– Present)

Role: Senior Data Engineer – Azure

Responsibilities:

- Demonstrated proficiency in Agile methodologies, working within cross-functional Agile teams to deliver data engineering solutions on schedule and within scope.
- Designed and implemented end-to-end data solutions on the Azure cloud platform, including Azure Databricks, Azure Synapse Pipeline, and Azure Blob Storage.
- Developed and managed Azure Data Lake and Azure Blob Storage accounts to store, manage, and secure data assets.
- Created and maintained ETL pipelines using Azure Data Factory to orchestrate data workflows.
- Conducted data cleansing, transformation, and enrichment using SQL scripts to ensure data accuracy and consistency.
- Leveraged Azure Databricks for advanced analytics and big data processing, implementing end-to-end data pipelines.
- Created and maintained Databricks Delta tables for efficient and reliable data storage, enabling ACID transactions and scalable data processing.
- Utilized Databricks SQL Editor to write, optimize, and execute complex SQL queries for data analysis and reporting.
- Designed and managed Databricks workflows for orchestrating data processing tasks, ensuring efficient and reliable data pipelines.
- Implemented Databricks Data Catalog for effective data governance, metadata management, and data lineage tracking.
- Developed interactive Databricks notebooks for exploratory data analysis, ETL processes, and machine learning experiments using Python, SQL, and Scala.
- Created and optimized SQL queries, stored procedures, and data processing logic for data analysis and reporting within Azure SQL Database.
- Developed and optimized Snowflake data pipelines to process and transform data from Azure Data Lake, ensuring efficient data flow and scalability.
- Integrated Snowflake with Azure services like Azure Data Factory (ADF), Azure Databricks, Azure Functions, and Power BI for seamless data ingestion and visualization.

- Created and optimized SQL queries, stored procedures, and data processing logic for data analysis and reporting within Azure SQL Database.
- Utilized Spark Streaming and Azure Databricks for real-time data processing and streaming analytics.
- Developed end-to-end data pipelines in Azure Databricks, encompassing the bronze, silver, and gold stages for comprehensive data processing.
- Implemented the Bronze stage in data pipelines, focusing on raw data ingestion, storage, and initial data quality checks.
- Enhanced data quality and usability by transitioning data through the Silver stage, performing data transformations, normalization, and schema changes.
- Orchestrated data cleaning and transformation processes within Azure Databricks, ensuring the silver data was structured and ready for analysis.
- Proficient in designing, developing, and maintaining data pipelines and ETL processes using Azure Databricks.
- Leveraged Databricks for advanced data transformations, including aggregations, joins, and feature engineering, to prepare data for analytical purposes in the gold stage.
- Developed and maintained PySpark and Pandas-based data processing scripts and notebooks for data transformation and analysis.
- Developed a python script to transfer data from on-premises and developed a python script to hit REST API's and extract data.
- Proficient in working with structured, semi-structured, and unstructured data formats in Azure Databricks.
- Implemented data security and governance practices in Azure Databricks environments.
- Collaborated with data scientists to enable machine learning model deployment and data access in Azure environments.
- Worked on continuous integration and continuous deployment (CI/CD) pipelines for automated testing and deployment of data solutions.
- Collaborated with Azure DevOps teams to ensure high availability, scalability, and resource optimization for data systems.
- Successfully completed data migration projects to Azure, ensuring data consistency and integrity during the transition.

Environment: Jira, Agile Methodology, Azure Blob storage, Azure Data Lake gen2, SFTP, Sql Server management, Azure Data Bricks, Databricks delta tables, Databricks SQL editor, Databricks workflows, Databricks Data catalog, Databricks notebooks, SQL, Python, Scala, Azure Devops, Azure Repos, Azure pipelines, Azure Release, Azure Migration, Requirements gathering, Data Migration

Client: CBIZ Soft
Role: Data Engineer

Mar 2021– Dec 2022

Responsibilities:

- Demonstrated proficiency in Agile methodologies, working within cross-functional Agile teams to deliver data engineering solutions on schedule and within scope.
- Actively participated in Agile ceremonies such as daily stand-ups, sprint planning, sprint reviews, and retrospectives to ensure effective collaboration and communication within the team.
- Designed and implemented end-to-end data solutions on the Azure cloud platform, including Azure Databricks, Azure Synapse Pipeline, and Azure Blob Storage.
- Developed and managed Azure Data Lake and Azure Blob Storage accounts to store, manage, and secure data assets.
- Created and maintained ETL pipelines using Azure Data Factory to orchestrate data workflows.
- Worked with Azure Postgres SQL and Azure SQL databases to store and retrieve data for various applications and analytics.
- Designed and developed complex data models and database schemas in Azure SQL Database, optimizing data storage, retrieval, and organization.
- Engineered end-to-end data pipelines using SQL for data extraction, transformation, and loading (ETL) processes, ensuring high-quality data for analytics and reporting.

- Utilized Spark Streaming and Azure Databricks for real-time data processing and streaming analytics.
- Developed end-to-end data pipelines in Azure Databricks, encompassing the bronze, silver, and gold stages for comprehensive data processing.
- Implemented the Bronze stage in data pipelines, focusing on raw data ingestion, storage, and initial data quality checks.
- Enhanced data quality and usability by transitioning data through the Silver stage, performing data transformations, normalization, and schema changes.
- Orchestrated data cleaning and transformation processes within Azure Databricks, ensuring the silver data was structured and ready for analysis.
- Proficient in designing, developing, and maintaining data pipelines and ETL processes using Azure Databricks.
- Skilled in data ingestion from various sources such as Azure Blob Storage, Azure Data Lake Storage, and Azure SQL Database into Azure Databricks.
- Leveraged Databricks for advanced data transformations, including aggregations, joins, and feature engineering, to prepare data for analytical purposes in the gold stage.
- Stored and managed gold data in Azure data warehousing solutions, optimizing data structures for high-performance querying and reporting.
- Developed a python script to transfer data from on-premises and developed a python script to hit REST API's and extract data.
- Worked on continuous integration and continuous deployment (CI/CD) pipelines for automated testing and deployment of data solutions using Azure Devops.
- Successfully completed data migration projects to Azure, ensuring data consistency and integrity during the transition.

Environment: Python, SQL, Azure Databricks, Azure synapse pipeline, Azure blob storage, Azure data lake, Terraform, Azure postgres SQL, Azure SQL, Spark streaming, GitHub, Pycharm , Snowflake, Pyspark, Pandas.

Client: CBIZ Soft

Apr 2020 – Feb 2021

Role: Data Analyst

Responsibilities:

- Extensive experience in designing, developing, and implementing ETL processes using SSIS for efficient data extraction, transformation, and loading.
- Proficient in creating SSIS packages to integrate data from various sources into SQL. Server databases, data warehouses, and data marts.
- Experienced in designing and implementing complex data transformations and business logic using SSIS data flow components and expressions.
- Proficient in deploying and scheduling SSIS packages using SQL Server Agent, ensuring reliable and timely data processing.
- Skilled in troubleshooting and resolving issues related to data quality, performance, and error handling in SSIS packages.
- Implemented incremental loading strategies using SSIS to efficiently process large volumes of data and improve ETL performance.
- Strong understanding of SSIS control flow tasks and event handlers, enabling conditional execution and error handling.
- Experienced in deploying and managing SSIS packages in different environments, including development, testing, and production.
- Developed custom SSIS components using Script tasks and Script transformations, extending the capabilities of SSIS for specialized data processing requirements.
- Experienced in performance tuning and optimizing SSIS packages, including data flow transformations, buffer size tuning, and parallel execution.
- Strong understanding of SQL Server Reporting Services architecture, including report server configuration, security, and report delivery options.

- Experienced in deploying and managing SSRS reports to different report servers, ensuring secure and controlled access to reports.
- Collaborated with business stakeholders to gather report requirements, design report layouts, and deliver high-quality and visually appealing reports

Environment: SQL, SSIS, SSRS, ETL, SQL Server, Data Warehouse, Data Mart

EDUCATION

Southeast Missouri State University
Master's in Computer Science

May 2024
Cape Girardeau, Missouri

Lovely Professional University
Bachelor's in Computer Science and Engineering

May 2021
Punjab, India

Certifications:

- AWS Generative AI Applications Professional Certified
- Google Cloud Certified Professional Data Engineer
- IBM Data Science Professional Certificate
- Databricks Certified: Data Engineer Associate
- Microsoft Certified Azure AI Fundamentals
