EDUCATION

Master of Science (M.S.) in Computer Science.	August 2022 – May 2025
University of Central Missouri (UCM), Lees Summit, MO	3.30 CGPA
Related Courses: Data Science, Deep Learning, Data Analytics, Data Visualization.	
Bachelor of Technology(B-Tech) in Electrical and Communication Engineering	August 2018 – June 2022
CVR College of Engineering, Hyderabad, Telangana, India	4.00 CGPA

TECHNICAL SKILLS

-
- **Languages & Frameworks:** Java, Spring Boot, C, Python (NumPy, Pandas), PCI-DSS, Shell Scripting, Bash, Node.js
 - **Core Concepts & Programming Fundamentals:** Advanced Algorithms, Data Structures, Design Principles
 - **Frontend:** Angular, TypeScript, React, HTML, CSS, JavaScript
 - **Backend & APIs:** RESTful APIs, Microservices, Kafka (basic knowledge), Express.js
 - **Databases:** MySQL, PostgreSQL, Snowflake, MongoDB, Cassandra, Azure Cosmos DB
 - **Big Data & Analytics:** Apache Spark, Azure Databricks, Data Lake
 - **Cloud & DevOps:** Microsoft Azure (ADF, Databricks, ADLS Gen2), AWS (S3, EC2, Lambda, Redshift, DMS), Docker, Jenkins, Git, Azure DevOps
 - **Testing:** Junit, Mockito, Jasmine, Cypress, Postman
 - **Operating Systems:** Linux (Ubuntu, CentOS)
 - **Data Analysis:** Exploratory Data Analysis, Data Cleaning & Transformation, Feature Engineering, Statistical Analysis
 - **Data Visualization & Reporting:** Tableau, Power BI, Amazon QuickSight, Microsoft Excel
 - **Tools:** GitHub Copilot, ChatGPT, VS Code, IntelliJ, Jira

CERTIFICATIONS

-
- Artificial Intelligence with Machine Learning in Java presented by **ORACLE** Academy
 - Tata's Data Visualization: Empowering Business with Effective Insights Job Simulation on Forage <https://shorturl.at/cnJs3>
 - AZ-400: Development for enterprise DevOps <https://shorturl.at/j7VIX>
 - Microsoft Azure Fundamentals: Describe Azure management and governance <https://shorturl.at/er16l>
 - Microsoft Azure Fundamentals: Describe cloud concepts <https://shorturl.at/gvw3g>

EXPERIENCE

Assistant System Engineer – Tata Consultancy Services, Hyderabad, India	July 2022 – July 2023
• Contributed to a cloud migration project, assisting a client in moving their on-premises applications to AWS cloud services. Set up and optimized the infrastructure using Amazon EC2, S3, and RDS. Implemented Docker containers for application portability and deployed microservices using Kubernetes for orchestration, improving	

scalability and reducing infrastructure costs. Developed and deployed microservices using **Java** and **Spring Boot**, aligned with **PCI-DSS** compliance for transaction workflows.

- Worked on optimizing SQL queries and database performance for a large-scale inventory management system. Applied **SQL** techniques, including **query optimization and indexing**, to speed up data retrieval processes, reducing the load time by 30%. Migrated some of the client's data from **Oracle to MySQL**, ensuring compatibility and performance improvements. Assisted in setting up a **CI/CD pipeline** for a client project using **Jenkins** for continuous integration and **Git** for version control. Used “**Docker**” for containerization, allowing the development and production environment to be identical and reducing deployment errors. The process led to faster releases and reduced manual intervention.
- Supported complex enterprise software solutions and collaborated across teams to ensure stability and scalability. Conducted **data analysis** on usage metrics and performance logs to drive improvements, supporting growth of customer relationships and new partnerships.

Assistant System Engineer Trainee (Intern) – Tata Consultancy Services, Hyderabad, India

July 2021 – June 2022

- Built a console-based chat room application using Python sockets and multithreading, enabling multiple users to connect and chat in real time. Implemented a TCP server-client architecture, allowing the server to manage multiple client connections concurrently. Used threading in Python to handle each client in a separate thread, ensuring asynchronous communication. Designed user features such as nickname setting, broadcast messages, and user join/leave notifications. Deployed and tested the app on a **Linux VM**, logging events and debugging network issues using Shell scripts. Technologies Used: Python, Sockets, Threading, Linux, Shell Scripting, **XSD**, **YAML**

PROJECTS

Real – Time IoT Data Processing and Analytics Platform using AWS, Kafka and Snowflake:

- Created a real time data processing system to gather and evaluate IoT sensor data from various devices in a manufacturing facility. The system attained 98% data availability by leveraging Apache Kafka for data streaming, AWS Lambda for intermediate data transformation, and Snowflake for effective storage and querying of the processed information.
- Created a scalable data pipeline to handle time series data at high speeds and save it in snowflake for subsequent analytics and reporting. Developed real time data monitoring dashboards with AWS Quick Sight, allowing stakeholders to monitor machine health and forecast maintenance requirements.

Telecom Data Migration and Analysis using AWS DMS, REDSHIFT and Python:

- Directed the transition and analysis of telecom billing data from outdated systems to the cloud. Employed AWS DMS for migrating data, AWS Redshift for managing extensive structured data storage, and python for automating the process of data extraction and transformation.
- Managed the transfer of telecom data from traditional on- premises systems to AWS Redshift, JSON and XML, ensuring data integrity and enhancing query performance. Created python scripts to automate the conversion of migrated data, optimizing it for reporting and analysis in AWS Redshift.

Movie Ticket Booking using MongoDB:

- Created a complete, role specific movie ticket reservation system featuring sections for Admin, Theatre Owners, and Customers. Developed scalable REST APIs with Node.js and Express.js for managing users, showtimes, reservations, and payments. Created and executed a MongoDB NoSQL schema featuring collections for films, cinemas, auditoriums, timetables and transactions.
- Implemented JWT based authentication and secure user login for multi role access (Administrator, Proprietor, Client). Developed adaptive UI elements with HTML, CSS and JavaScript for interactive movie catalogs and ticket reservation processes. Employed Postman for API testing, MongoDB Compass for database oversight, and Git for version management and collaboration.
