

KATAM PRAVIDIK REDDY | Data Analyst

MO | +1 (660) 528-0700 | pravidikreddykatam@gmail.com | LinkedIn

SUMMARY

Data Analyst with 3+ years of experience in healthcare and financial services, specializing in data visualization, data warehousing, and advanced analytics. Skilled in SQL, Python, Tableau, Power BI, and Snowflake to transform raw datasets into actionable insights that improve care outcomes and optimize financial risk. Proven ability to design scalable data pipelines, build intuitive dashboards, and support data-driven decision-making across cross-functional teams.

EDUCATION

Master in Computer science Information systems, Northwest Missouri State University, MO	May 2025
Bachelor of Technology in Engineering, Osmania University, India	Jul 2023

TECHNICAL SKILLS

Programming & Data	SQL, Python, R, dbt, Excel (Advanced), Git
Data Engineering & Warehousing	Apache Spark, Apache Airflow, ETL Development, Snowflake, PostgreSQL, AWS, Azure, BigQuery, Redshift
Visualization & BI	Tableau, Power BI, KPI Dashboards, Self-Service Reporting
Data Quality & Analytics	Great Expectations, Reconciliation Checks, Cohort Analysis, Predictive Modeling, Hypothesis Testing, A/B Testing
Domain & Collaboration	Healthcare Analytics (Claims, Enrollment, Utilization), Financial Analytics (Loans, Risk, Underwriting), Stakeholder Management
Methodologies	Agile, Scrum, SDLC, Data Governance, JIRA, Confluence

EXPERIENCE

Data Analyst Elevance Health, USA	Jun 2025 – Current
- Analyzed large claims and enrollment datasets to surface high-cost cohorts and utilization trends; findings informed care management strategies and reduced avoidable ER visits by 9%. - Developed scalable Snowflake/dbt data models and transformations to standardize member, claims, and provider subject areas, cutting downstream latency by 45%. - Built automated data quality validation with Great Expectations, enabling early anomaly detection and improving trust in reporting across 30+ dashboards. - Delivered Power BI dashboards with actionable KPIs (readmission rates, ER utilization, care adherence), accelerating leadership decision cycles from weeks to days. - Collaborated with clinicians, product managers, and engineers to define KPIs, translate requirements, and recommend interventions; pilot programs improved follow-up adherence by 14%. - Operationalized analytic workflows by documenting metric definitions, building run books, and enabling self-service exploration, ensuring long-term sustainability of insights.	
Data Analyst Intern Elevance Health, USA	Feb 2025 – May 2025
- Assisted in cleaning and preparing claims and enrollment datasets using SQL and Python, ensuring accuracy for downstream analysis. - Supported dashboard development in Power BI by creating visuals for readmission and ER utilization metrics used in team reviews. - Documented data definitions and ETL steps, improving onboarding materials and knowledge sharing across the analytics team. - Conducted quality checks on sample claims files using Great Expectations templates, helping identify anomalies before integration. - Collaborated with senior analysts to gather requirements and translate them into simple SQL queries for ad-hoc reports.	
Data Analyst 7FinCorp Group, India	Jun 2021 - Dec 2023
- Conducted cohort and repayment-behavior analyses on application, bureau, and repayment datasets to identify high-risk segments; findings guided underwriting rule changes and reduced 90-day delinquency by 6%. - Created end-to-end ETL workflows using Apache Airflow and Spark to ingest and normalize bureau pulls, bank statements, and application data into PostgreSQL, increasing ingestion throughput 3× and enabling hourly data refresh. - Engineered predictive features (cash-flow volatility, DSCR proxies, and behavior flags) and developed prototype risk scores in R; back testing improved early-default detection by 12% versus baseline rules. - Built Tableau dashboards for underwriting, credit, and portfolio teams to visualize approval funnels, vintage performance, and early-warning indicators; dashboards cut manual reporting effort by 40%. - Implemented SQL-based reconciliation checks and Airflow health alerts to validate ETL integrity, reducing daily data mismatches by 70% and shortening incident resolution time. - Collaborated with product, compliance, and credit teams to design and analyze A/B experiments for policy changes; the winning policy increased application conversion by 10% with no material rise in losses. - Documented data dictionaries, run books, and trained 12+ stakeholders on Tableau self-service and ad-hoc SQL reporting to drive analytics adoption.
