

Preetham Mantur

Data Engineer

Ph.No: +1 (971) 275-4932 | Email : preetham.r257@gmail.com

Linkedin : <https://www.linkedin.com/in/preetham27/>

PROFESIONAL SUMMARY:

Experienced Data Engineer with over 5 years of expertise in IT, specializing in cloud technologies (GCP, Azure) and on-prem clusters. Skilled in ETL and ELT frameworks, data ingestion strategies, and end-to-end data pipelines. Proficient in GCP and Azure platform services, batch and real-time data ingestion, modular code design, SQL query translation, and more. Adept at working with sensitive data, BI reporting tools, DevOps processes, and Agile methodologies.

WORK EXPERIENCE:

Data Engineer | Alpha Recon | Colorado, USA | Jun 2023 – Present

- Spearheaded the development of an automated file processing pipeline using Azure Functions and blob triggers, resulting in a 30% reduction in manual processing time.
- Introduced Python applications for web scraping and data loading, optimizing the process and saving 15 hours per week.
- Implemented ETL Pipelines in Azure Data Factory for SFTP to Azure storage, reducing data transfer latency by 25%.
- Utilized Python libraries (NumPy, Pandas) for data conversion and standardization, resulting in 20% faster data preparation.
- Designed and implemented monitoring dashboards using Azure Log Analytics, enhancing operational visibility and reducing issue resolution time by 40%.

GCP Data Engineer | Concentrix | Hyderabad, India | Sep 2019 - Nov 2021

- Engineered an event-driven batch ingestion pipeline using GCS Notifications, PubSub, Cloud Functions, and BigQuery, decreasing data processing time by 50%.
- Developed configuration driven ETL pipelines using Airflow Dag Factory pattern, reducing manual intervention by 70% and improving pipeline reliability.
- Customized GCS sensors for waiting capabilities, saving an average of 2 hours per pipeline run by eliminating unnecessary waiting time.
- Automated pipeline notifications using callback features and custom Python code, resulting in a 60% reduction in missed alerts.
- Created complex ETL pipelines for Oracle MDM, Sibel, and Coupa source data, improving data accuracy by 25% and reducing processing time by 30%.
- Implemented controlled data sharing via authorized views and Row access policies, enhancing data security and compliance.

Senior Associate | City Union Bank LTD | India | June 2017 – Aug 2019

- Optimized data ingestion from RDBMS systems using Sqoop, reducing data transfer time by 40%.
- Managed Hive tables, performed data modeling, and created HQL files for various transformations, improving query performance by 30%.
- Developed PySpark applications for data cleanup and Spark SQL transformations, reducing data processing errors by 20%.

- Submitted Spark applications and orchestrated jobs using Oozie workflows, streamlining job scheduling and reducing manual intervention by 50%.
- Created region-specific Data Marts for stakeholders, enhancing data accessibility and reducing data retrieval time by 25%.

Education:

Masters in computer science | University of Central Missouri | Jan 2022 - May 2023

Bachelor of Technology in Computer Science | JNTUH University | Aug 2012 - Jun 2016

SKILLS:

Programming Languages: Python, JAVA, UNIX Shell Scripting

Cloud Platforms: GCP (GCS, BigQuery, Cloud Function, Composer, DataFlow, DataProc, VPC, App Engine, IAM), Azure (Data Factory, Azure Functions, Databricks, Azure Storage, Azure Log Analytics, Logic App)

Big Data Tools: Spark, Hadoop, Hive, Oozie, Sqoop, HDFS

Databases & Reporting Tools: SQL, MongoDB, BigQuery, Snowflake, Data Studio, Tableau

Scheduling Tools: Apache Airflow, Oozie

Others: Agile Methodologies, CICD, GIT, Jira, Confluence.

Certifications:

- Post-Graduation Diploma in Data Analytics (Imarticus Learning)
- Data Visualization using Python by IBM
- SQL by Skill India
- Machine learning with Python by IBM
- Python for data Science by IBM
- Pursuing Big Data Master's Program by TrendyTech

ACADEMIC PROJECTS

Data Engineering Capstone Project

- Designed and implemented star schema data warehouse model in Redshift for incoming batch data.
- Developed ETL using AWS Lambda, Spark, and Apache Airflow for data processing and loading.
