SUMMARY

Full-Stack Software Engineer with 3+ years of experience in designing and delivering scalable Java/J2EE-based applications in Agile environments. Proven ability to develop RESTful APIs, implement Spring-based microservices, and maintain full-stack systems across cloud platforms. Experienced in SQL/DB2, unit testing with JUnit, and enterprise-grade tools. Skilled in collaborating with cross-functional teams, performing code reviews, and supporting production-grade systems with strong debugging and monitoring capabilities.

EDUCATION

Master of Science in Computer Science - University of Georgia

Relevant Coursework: Algorithms, Software Engineering, Database Management, Computer Networks, Android, Object-Oriented Programming, Secure Programming, Data Structures, Cloud computing, Machine Learning, Operating Systems

TECHNICAL SKILLS

Programming Languages:	Java, Python, JavaScript, C++, TypeScript, SQL, HTML, CSS
Web Development & Frameworks:	Spring Boot, React.js, Node.js, Django, JPA, Jest, JUnit
Databases:	SQL Server, MySQL, MariaDB, PostgreSQL, MongoDB, Firebase, NoSQL, SQLite.
Cloud Services and Deployment:	AWS, Docker, Jenkins, Git, JIRA, Postman

PROFESSIONAL EXPERIENCE

Software Engineer, USAA | Chesapeake, VA

January 2025 - Present

- Engineered over 10 modular microservices in **Java** following **SOLID** principles and enterprise architecture best practices (reliability, scalability, performance)
- Created and secured 20 **RESTful API** endpoints using **Spring Boot (MVC)**, **Spring Security**, and **JWT** authentication
- Automated **CI/CD** pipelines with **Jenkins & GitHub Actions**, cutting deployment time by 60% and rollback time by 40%
- Managed semi-structured datasets with **MongoDB**, reducing query complexity and improving data retrieval speed by 25%
- Designed and implemented an in-app and **email notification** architecture using **Kafka**, reducing alert delivery time by 40%
- Monitored production services via **AppDynamics** and **Splunk**, resolving 95% of incidents within 30 minutes
- Designed and deployed scalable, fault-tolerant, and secure cloud infrastructure using **AWS** services including **EC2, S3, EBS, ELB, API Gateway, Route 53, CloudFront, Auto Scaling, Elastic Beanstalk, VPC, CloudWatch, RDS, SNS, and SQS**
- Participated in **Agile** ceremonies (**SAFe** framework) using **JIRA** for sprint planning, daily stand-ups, backlog grooming, and retrospectives, ensuring continuous delivery and alignment with evolving product goals

Full Stack Developer, Safertek IT Solutions | Hyderabad, India

August 2021- October 2022

- Developed **Java**-based web application using **Spring Boot**, creating more than 50 **RESTful APIs** following **MVC** architecture to streamline core functionalities across Sales, Procurement, Manufacturing, and Finance modules
- Migrated **SQL** database to **MariaDB**, designing 100 tables and 500 stored procedures to enhance performance and scalability
- Improved **CI/CD** efficiency with **Jenkins, GitHub Actions, and Docker**, reducing deployment time by 40%
- Used Maven for build automation and created JUnit and Selenium test suites, achieving 80% unit test coverage and enhancing code quality through automated UI and integration testing
- Deployed and maintained Java microservices on **AWS (Lambda, API Gateway, EC2, S3, RDS)** using serverless and cloud-native architectures, improving performance by 40% through auto-scaling and secure content delivery
- Documented over 50 **business process requirements** in detailed technical and functional specifications

Software Developer, Brane Enterprises | Hyderabad, India

May 2020 - July 2021

- Developed reusable **React.js** components using **Hooks** and **Context API**, reducing UI code duplication by 30% and improving maintainability
- Architected advanced client-side routing and state management with **React Router and Redux Toolkit**, enhancing user experience and reducing page load latency by 35%
- Optimized **PostgreSQL** database through **indexing** strategies, improving query execution times by 20%
- Applied coding standards like **dependency injection** and **structured logging** to ensure maintainable and testable code
- Leveraged communication and collaboration skills in **cross-functional teams**, contributing to a productive **Agile** environment
- Implemented **multi-threading** techniques to parallelize data processing, reducing response latency by 35%

PROJECTS

Automobile management system | Python, Django, React, MySQL, Docker

- Built a scalable full-stack system for managing automobile store operations, integrating Django backend with React UI and containerized deployment using Docker

Cinema E-Booking System | Java, Spring Boot, React.js, PostgreSQL

- Led the development of a secure, full-stack e-booking platform using Spring Boot and React.js, integrating Stripe payments and PostgreSQL-backed ticket management

AWS Integrated File System | AWS CDK, Lambda, API Gateway, S3, DynamoDB, EC2, Amplify, TypeScript, JavaScript

- Engineered a fully serverless file handling system using AWS services and CDK, enabling automated uploads, event processing, and durable storage
