

Prem Sita Ram Karri | Full Stack Java Developer

premsitaram9@gmail.com | <http://linkedin.com/in/KarriRam>

+1 737-497-5837

PROFESSIONAL SUMMARY

Experienced Full Stack Java Developer with 5 years of expertise in developing scalable web applications using Java 17, 11, Spring Boot, Microservices, Hibernate, and REST APIs. Proficient in Angular, React, SQL, MongoDB, Kafka, and cloud platforms (AWS/Azure). Strong knowledge of Agile methodologies, CI/CD pipelines, Docker, and Kubernetes. Skilled in performance optimization, security best practices, and event-driven architecture. Adept at collaborating with cross-functional teams to deliver high-quality solutions.

SKILLS

- **Backend & API:** Java 11+, Spring Boot, Microservices, Hibernate, REST, SOAP, WebSockets, Multithreading, GraphQL
- **Frontend & UI Frameworks:** Angular, React, JavaScript, TypeScript, HTML, CSS, Bootstrap, Material UI, Redux
- **Database & Messaging:** MySQL, PostgreSQL, MongoDB, Redis, Oracle, SQL Server, Kafka, RabbitMQ, Apache
- **Cloud, DevOps & Version Control:** AWS (Lambda, S3, API Gateway, ECS), Azure, Docker, Kubernetes, Jenkins, GitHub Actions, Git, GitLab, Bitbucket, CI/CD, Swagger, Postman, Agile, OOPS
- **Testing, Security:** JUnit, Mockito, Cucumber, SonarQube, OAuth2, JWT, Spring Security, Agile TDD, BDD, SDLC

EDUCATION

- **Masters In Computer and Information Science**, Western Illinois University, Chicago | Dec 2022
- **Bachelors in Computer Science Engineering**, C.M.R Institute of Technology, India | Sep 2020

EXPERIENCE

Role : Full Stack Java Developer | Client: IQVIA | Remote, USA

Apr 2023 – Present

Project Description: Contributed to the development of a data analytics platform for healthcare and pharmaceutical data processing. Focused on ensuring real-time reporting and scalability to support clinical decision-making. Optimized data integration from multiple sources, improving system performance.

- Developed a scalable **patient management** system using **Java 17, Go, Spring Boot (Microservices), and Angular, Python** for **data Analysis** implementing core healthcare features such as **EHR (Electronic Health Records), claims processing**, and real-time patient monitoring while ensuring **HIPAA compliance and OWASP security best practices**.
- Designed and optimized **RESTful APIs and GraphQL endpoints** using **Spring Boot, Spring WebFlux, Hibernate, and PostgreSQL**, ensuring efficient data retrieval and **secure authentication via OAuth 2.0 and JWT** for patient portals.
- Implemented **event-driven architecture** using **Apache Kafka and RabbitMQ**, ensuring **real-time communication** between **healthcare services** such as lab test notifications, insurance approvals, and appointment reminders
- Developed and maintained **CI/CD pipelines** using **Jenkins, GitHub Actions, and Terraform**, automating **build, test, and deployment** processes for **containerized** applications deployed on **AWS (ECS, Lambda, RDS)**
- Designed, developed **ETL processes and data pipelines** in a healthcare environment using **Teradata**, ensuring efficient data integration and transformation to support analytics and reporting for patient care and operational insights
- Conducted thorough **code reviews and mentored junior developers**, enforcing best practices in **SOLID principles, design patterns, and clean architecture**, while contributing to **detailed technical documentation** for APIs, deployment strategies, and troubleshooting using **Swagger** and testing using **Postman**.

Role: Java Full Stack Developer | Client : TCS | Minnesota MN

Oct 2022 - March 2023

Project Description: The Power Supply Management System was designed to manage and monitor electricity distribution across various regions served by Xcel Energy. The system provided real-time tracking of energy usage, ensured optimal distribution of power, and facilitated faster response to outages through predictive analytics. It also integrated IoT devices to collect data from power grids and substations, helping the company enhance operational efficiency.

- Developed **microservices** using **Java 17, Spring Boot, and Go**. Integrated **REST APIs** for communication between services and utilized **Apache Kafka** and **Azure Service Bus** for **messaging queues**, enabling **asynchronous event-driven architecture**. Managed data storage with **Oracle RDBMS** using **JPA** and **Hibernate**.
- Leveraged **Python** for **data analysis, visualization, and predictive modeling**. Implemented **shell scripting** on **Unix systems** for **automation** tasks and system monitoring, engineered **data pipelines and ETL** solutions, enabling **predictive maintenance**, load forecasting, and **real-time monitoring** to enhance operational efficiency.

- Developed **CI/CD pipelines** using **Azure DevOps** and **Jenkins**, automating deployment to **Azure Kubernetes Service (AKS)** for **container orchestration**. **Containerized** applications using **Docker**, with deployment **orchestration** managed by **Kubernetes**. Used **Helm** for **Kubernetes** package management, ensuring efficient application scaling.
- Designed responsive web interfaces using **React**, **TypeScript**, **HTML**, **CSS**, and **Bootstrap**. Implemented secure **authentication** with **OAuth 2.0** and **JWT tokens** for user access control. Integrated **IIS server** for deploying and hosting **enterprise-level applications** on a secure web server.
- Followed **Agile** methodologies using **JIRA** for **sprint management** and task tracking. Designed backend code applying **Object-Oriented Programming (OOP)** principles and **SOLID design patterns** (Factory, Singleton, Strategy). **Automated testing** with **JUnit**, **Mockito**, **Selenium**, and **Cypress** for frontend testing. Ensured high-quality code throughout the **SDLC** lifecycle.

Role: Associate Java Full Stack Developer | Client - Southwest Airlines | Texas, USA

Apr 2022 – Sep 2022

Project Description: The Passenger Management System for Southwest Airlines, focusing on streamlining passenger check-in, booking, and seat selection processes. Developed a **responsive** web application to improve user experience and optimize backend performance. Integrated real-time data processing, booking updates, and implemented robust security measures to ensure smooth operations for users

- Developed **microservices** using **Java**, **Spring Boot**, **Hibernate**, and integrated **RabbitMQ** for **asynchronous** message processing, while implementing **exception handling** strategies. Implemented **data integration** solutions, streamlining **data processing** and decision-making through **advanced analytics** and reporting in **Teradata**.
- Built **React.js** front-end components with **HTML**, **CSS**, and **Bootstrap** for a responsive, user-friendly interface, and utilized **Go** for developing high-performance services for flight data processing.
- Leveraged **Python** and **PowerShell** for scripting and **automating batch** processing tasks related to **data analysis** and reporting, and implemented **OAuth 2.0** and **JWT tokens** for secure **user authentication** and **authorization** across the system, ensuring compliance with **WCAG** accessibility standards.
- Designed **CI/CD pipelines** with **AWS** infrastructure, **Git**, **Jenkins**, **Docker**, and **Kubernetes** to **automate** deployments, integrated **unit and integration testing** into the pipeline, and used **event-driven management**.
- Followed **Agile** development practices using **JIRA** for sprint tracking, adhered to **SOLID principles** and **design patterns** to ensure maintainable code, and integrated secure communication channels using **RabbitMQ** for message queuing, while applying **security best practices** such as data encryption and **token-based authentication**.

Role: Junior Java Developer | Client - L-Com Inc | India

Sep 2019 – Jul 2021

Project Description: Developed and maintained an **ERP system** to manage the company's business operations in a more efficient manner. The system streamlined various business functions such as order processing, financial management, and inventory tracking, resulting in reduced operational costs and improved data accuracy.

- Leveraged **Spring Boot** and **Java** to develop robust **microservices** for various ERP functionalities such as order management and financial reporting. Used **Docker** to **containerize** services for deployment across environments.
- Integrated **MongoDB** for efficient storage and retrieval of unstructured data, Applied **JUnit** for comprehensive **unit testing** of backend components, while utilizing **Cucumber** to automate **acceptance tests** based on user stories.
- Deployed scalable applications on **Azure Cloud** and automated **CI/CD pipelines** using **Azure DevOps**. Developed dynamic user interfaces with **JavaScript**, **jQuery**, **HTML**, **CSS**, and **Bootstrap** to enhance user experience.
- Utilized **Git** for **version control** and collaboration within an **Agile SDLC**, enabling continuous integration and delivery of ERP modules like HR, CRM, and inventory management.
- Automated critical ERP processes such as **data synchronization** and **batch report generation** using **Shell Scripting** in a **Unix**, **reducing** manual intervention for operational tasks across **financial** and **inventory** systems.
- Conducted **performance testing** with **JMeter** to simulate peak system loads and optimize the performance of ERP modules. Performed **regression testing** to validate that new updates did not break existing functionalities.
- Integrated **SOAP-based payment gateway** for secure transaction processing, using **JSON** for data exchange, ensuring secure and reliable data transmission with **OAuth** authentication for sensitive transactions.

CERTIFICATIONS

- **Microsoft Certified : Azure Data Engineer Associate** - Certification number - A84D13- 8BE675
- **AWS Certified Solutions Architect - Associate** - Certification Number - 471ac1b0f06d4976ae9630d417d2120a
