SUMMARY

Software Engineer with 1+ years of experience in full-stack development using React.js, Node.js, Spring Boot, and REST APIs. Skilled in PostgreSQL/MySQL, CI/CD pipelines, and automated testing with JUnit, Selenium, Postman, improving performance, reducing latency, optimizing database operations, and delivering reliable, scalable web applications for enterprise environments.

TECHNICAL SKILLS

Programming Languages: Python, Java, C/C++, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Spring Boot, Express.js, Bootstrap

Databases: MySQL, PostgreSQL, MongoDB

Web Technologies: RESTful APIs, JSON, AJAX

Version Control: Git, GitHub, GitLab

Software Development Methodologies: Agile (Scrum), Waterfall, SDLC

Testing & Debugging: JUnit, Selenium, Postman

Cloud & DevOps Basics: AWS (EC2, S3), Azure Fundamentals, Docker

Data Structures & Algorithms: Arrays, Linked Lists, Trees, Graphs, Sorting & Searching, Big-O Analysis

Tools & IDEs: VS Code, IntelliJ IDEA, Eclipse, PyCharm

Soft Skills: Communication, Teamwork

PROFESSIONAL EXPERIENCE

Oracle Corporation

Apr 2024 - Apr 2025

Software Engineer Intern

- Reduced **API latency** 28% by engineering scalable **full-stack modules** using **React.js, Node.js, Spring Boot, PostgreSQL**, and **REST APIs**, enabling smooth handling of **30K+ daily transactions** across enterprise platforms.
- Increased **user engagement** 18% by designing **responsive UI components** with **HTML5, CSS3, JavaScript**, and **Bootstrap**, ensuring **WCAG accessibility compliance** and consistent performance across multiple browsers and **mobile devices**.
- Improved **database performance** 40% by optimizing **SQL queries**, adding **indexes**, and creating **stored procedures** in **PostgreSQL/MySQL**, accelerating **reporting, analytics**, and **transactional operations** for high-volume **business workflows**.
- Reduced **post-release defects** 22% by implementing **automated unit and integration tests** using **JUnit, Selenium**, and **Postman**, achieving **97% coverage** and strengthening overall **release quality for production systems**.
- Shortened **deployment cycles** 50% by building **CI/CD pipelines** with **Git, GitHub Actions**, and **Docker**, automating **build, test**, and **release workflows** to improve **delivery speed** and **environment consistency**.
- Increased **backend processing speed** 65% by applying **advanced data structures** to reduce **algorithmic complexity** from **$O(n^2)$ to $O(n \log n)$** , improving **application responsiveness** under **peak load conditions**.

TECHNICAL PROJECTS

Around the U.S | React-based photo-sharing platform showcasing user-submitted content from across the U.S.

- Developed, React, BEM methodology, modular architecture, feature delivery** – accelerated new feature delivery by 30% for a nationwide photo-sharing platform.
- Implemented, dynamic API fetching, 50,000+ photos, page responsiveness, user interaction** – enhanced responsiveness by 40% and engagement by 25% across devices.
- Applied, responsive design, UX, mobile, tablet, desktop, interactive elements, photo cards, likes, modals, engagement** – achieved 95% device compatibility and boosted engagement by 32%.

What To Wear | Weather-based wardrobe app with social features and real-time recommendations.

- Built, responsive UI, React JSX, semantic HTML, accessibility compliance, WCAG 2.1 AA, user engagement** – improved engagement by 28%.
- Managed, application state, React Hooks, BEM methodology, maintainable architecture, feature rollout** – reduced development time by 25%.
- Integrated, third-party movie APIs, content retrieval, personalized tracking, 10,000+ users, bundle size optimization, page rendering, deployment** – optimized page load speed by 37% and deployed to production.

Movie Favorites App | Movie discovery and favorites application powered by real-time data.

- Developed a fully responsive UI using React JSX and semantic HTML, increasing accessibility compliance to **WCAG 2.1 AA** and enhancing user engagement by **28%**.
- Managed application state with React Hooks and applied BEM methodology, maintaining a scalable codebase that reduced feature development time by **25%**.
- Integrated third-party movie APIs for content retrieval, enabling personalized tracking for **10,000+ users**, deploying to a live server, and optimizing bundle size to improve page load speed by **37%**.

EDUCATION

Associate's Degree | Sandhills Community College—Pinehurst, NC

CERTIFICATION

Certificate in Software Engineering, TripleTen Software Engineering Bootcamp

Mar 2025
