

# Prisha Chawla

Irvine, CA | prishachawla10@gmail.com | (408) 718-9997 | linkedin.com/in/prisha-chawla | github.com/prisha03

## Summary

Data engineer and analytics professional with hands-on experience building ETL pipelines, cloud-based data workflows, and interactive BI dashboards that drive business decisions. Skilled in Python, SQL, AWS, and data modelling, with a track record of transforming large, messy datasets into scalable, actionable insights. Experienced across finance, healthcare, and tech, with a strong foundation in cloud analytics, pipeline automation, and KPI reporting.

## Education

Master of Science in Business Analytics

University of California, Irvine

July 2024 – August 2025

Bachelor of Computer Applications

Symbiosis Institute of Computer Studies and Research

August 2020 – May 2023

## Skills

- **Data Engineering & Cloud:** AWS, Docker, Data Lakes, ETL Pipelines, Streamlit, Workflow Automation
- **Programming & Querying:** SQL (Joins, CTEs, Window Functions), Python (Pandas, NumPy, Matplotlib, SciPy), R
- **Data Warehousing & Modelling:** MySQL, PostgreSQL, Dimensional Modelling, Star Schema, Metadata Documentation
- **Business Intelligence & Dashboards:** Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), KPI Reporting, Data Visualisation
- **Big Data & Advanced Analytics:** Clustering, Regression, RAG Pipelines, LangChain, XGBoost (Pipeline Integration)
- **Soft Skills:** Cross-Functional Collaboration, Product Thinking, Stakeholder Communication, Strategic Problem-Solving

## Experience

Student Data Scientist

Blue Cross Blue Shield – Remote

Feb 2025 – Jun 2025

- Developed a **retrieval-augmented data pipeline** using FAISS and LangChain to efficiently process and summarise earnings call transcripts, improving insight accuracy and reducing manual research.
- Built a **self-serve Streamlit dashboard** for competitive intelligence, enabling business teams to access structured SWOT insights on demand.
- Automated **data ingestion, indexing, and summarisation workflows**, ensuring reproducibility and cutting report preparation time by 50%.
- Collaborated with cross-functional teams to translate open-ended business questions into scalable data solutions for faster decision-making.

Data Scientist

Hewlett Packard Enterprise – Pune, India

Aug 2023 – Apr 2024

- Designed and optimized **SQL-based ETL pipelines** for performance logs, reducing false alerts by 30% and improving monitoring efficiency.
- Built **real-time Power BI dashboards** and automated alert systems, enabling proactive incident response and reducing downtime by 20%.
- Collaborated with **DevOps teams** to deploy targeted patches and update monitoring scripts, accelerating bug resolution by 30%.
- Documented **key metrics, thresholds, and pipeline logic** to enhance reproducibility and cross-team troubleshooting.

Data Scientist Intern

Commercial Bank of Qatar – Doha, Qatar

Jan 2023 – Apr 2023

- Built **ETL pipelines** in Python and MySQL to process 100K+ transaction records, enabling early detection of high-risk accounts and reducing potential fraud losses.
- Developed **interactive Power BI dashboards** for the credit risk team, providing real-time insights that improved loan recovery decisions.
- Applied **customer segmentation and clustering** to identify target groups for marketing campaigns, increasing ROI by 20%.
- Ran **time-series analyses** on transaction activity to forecast seasonal trends and improve app retention strategies by 15%.

Data Scientist Intern

Schrander Solutions Pvt. Ltd. – Pune, India

Jul 2022 – Dec 2022

- Built **client-facing Power BI dashboards** connected to MySQL databases, reducing reporting turnaround time by 35%.
- Designed and implemented **automated ETL workflows** and data validation checks, ensuring 100% accuracy in recurring reports.
- Standardised **metadata and field documentation**, improving team onboarding and reducing handover confusion by 50%.
- Partnered with clients to **align KPIs with business objectives**, driving higher engagement and successful dashboard adoption.

## Projects

Blinkit Sales Analytics Dashboard

- Built a fully interactive **Power BI dashboard** to monitor sales across outlet locations, sizes, and item types.
- Created **DAX measures** for average sales, item ratings, and YoY growth, enabling dynamic performance insights.
- Enabled **self-serve KPI tracking and segmentation** for merchandising strategy optimisation.

Geospatial Alcohol Consumption Analysis

- Built **ETL workflows in Alteryx** to merge scraped demographic and consumer spending datasets.
- Conducted **spatial analysis in ArcGIS Pro** to identify high-demand trade areas for regional retail expansion.
- Created **Tableau dashboards** to visualise location-based alcohol consumption trends.

Risk Prediction Pipeline

- Developed a **predictive analytics pipeline** to flag high-risk cases from tabular data with 85%+ accuracy.
- Applied **SHAP explainability** to ensure model transparency and readiness for BI dashboard integration.
- Delivered a **reproducible Python workflow**, enabling downstream deployment for analytics teams.

## Certifications & Publications

**Certifications:** Alteryx Designer Core (2025) | AWS Cloud Practitioner (In Progress)

**Publication:** *Bite-Sized News with NLP: Automatically Summarizing CNN Articles Using AI* — Published on Medium, 2025
