

Prithvi Amin

+1 (812) 345 4454 | prithvia28@gmail.com | [Linkedin](#) | [Github](#)

Data Engineer and BI Developer with 3 years of experience delivering production-grade data pipelines, automating ETL workflows, improving data quality, and developing interactive dashboards in Power BI and Tableau; ready to drive efficiency, insight, and scalability for fast-moving teams.

EDUCATION

Indiana University

Master's in Computer Science, GPA: 3.93/ 4.0

Bloomington, IN, USA

August 2023 - May 2025

Mumbai University — Vivekanand Education Society's Institute of Technology

Mumbai, MH, India

Bachelor's in Engineering, Information Technology, GPA: 9.15/ 10.0

July 2017 - May 2021

TECHNICAL SKILLS

Programming Languages & Databases: Python, SQL, PL/SQL, JavaScript, MongoDB, Firebase, PostgreSQL, PySpark, Hadoop, Kafka, Redis

Data and Dev Tools: Pandas, NumPy, scikit-learn, Plotly, Ab Initio, Talend, SSIS, Power BI, Tableau, dbt, Docker, Git, AWS, Azure, Excel, Jira

Core Competencies: Data Engineering & Analysis, Data Visualization, Real-time Data Processing, Cloud Solutions, Data Modeling & Integration

WORK EXPERIENCE

Senior Consultant

Heartland Community Network, Ellettsville, Indiana

June 2025 - Present

- Developed and maintained a PostgreSQL-based data warehouse with a 3-layer architecture (Staging, Gold, DataMart) supporting **30+ workforce datasets** across 11 Indiana counties for downstream BI reporting.
- Designed and automated ETL workflows that processed **100k+ records monthly** from web scrapers and APIs, reducing manual data preparation time by 70% and ensuring >95% data accuracy for workforce analysis.
- Built and deployed **10+ KPI-driven Power BI dashboards** used by 150+ stakeholders across 11 counties to monitor employment trends, job openings, and wages; reduced ad-hoc reporting requests by 40%.

Intern

Clocky, Glendale, California

May 2024 - August 2024

- Designed and optimized end-to-end e-commerce **data pipelines** to ensure reliable data flow across inventory, user activity, and transactional systems. Reduced **data latency by 40%** and significantly improved backend performance.
- Diagnosed and resolved email deliverability issues by configuring DNS and DMARC settings, achieving a **100% success rate** for all emails.
- Integrated real-time social and user engagement data (e.g., Instafeed) into backend systems via **REST APIs**, doubling dynamic content refresh frequency and increasing user engagement by 35% along with a 20% rise in social referral traffic.
- Developed and maintained **user behavior dashboards** using Shopify analytics and custom scripts, providing actionable insights on top-performing SKUs and improving conversion rates through optimized product placements.

Senior Data Engineer

LTIMindtree, Mumbai, India

June 2021 - July 2023

- Consolidated financial data from **Citibank's** internal systems by building **Ab Initio** graphs with dynamic schema mapping and partitioned parallelism, reducing manual reconciliation time and improving cross-team data consistency.
- Automated daily ETL prep and risk monitoring reports using **Python** scripts with **BeautifulSoup** and **Selenium** to scrape regulatory websites, reducing turnaround time from **3 hours to 15 minutes** and ensuring faster delivery of compliance reports.
- Engineered complex **SQL** queries with multi-level joins and dense rank window functions in **Unix**-based environments to support SIT cycles, increasing data anomaly detection accuracy and accelerating test coverage for **edge cases**.
- Identified critical data elements and discrepancies by comparing source feed reports with downstream consumer outputs, then documented functional requirements and validation logic, reducing recurring **data quality issues by 40%** and improving SLA compliance.

ACADEMIC PROJECTS

HR Analytics Dashboard | Tableau

- Developed a dynamic, end-to-end HR dashboard in **Tableau** featuring calculated fields to segment employee status (active, hired, terminated), age brackets, and tenure; enabling real-time visibility into workforce trends and departmental performance.
- Designed **interactive visualizations** including heatmaps, correlation charts, and drill-down views across age, education, and employment status, using advanced layout containers, performance tuning, and UX-focused formatting to deliver executive-ready insights.

Multi-Agent Recommendation System with Advanced Data Pipeline and AI-Powered Risk Analysis| Python, Streamlit, APIs

- Architected a **real-time** financial analysis pipeline using yfinance API with 4 intercommunicating agents performing ETL operations on market data to calculate key technical indicators visualized through an interactive **Plotly dashboard** for actionable insights.
- Integrated Google's Gemini API for **AI-driven** recommendations and built a feedback loop between risk and execution agents, reducing false positives by 40% while preserving data integrity across the pipeline.

Cloud-Based ETL Framework for Large-Scale Data Processing | AWS S3, PySpark, EC2, SageMaker, QuickSight, Lambda, AWS SNS

- Engineered a full-scale data pipeline on AWS using **S3** for storage, **PySpark** on **EC2** for distributed processing, **SageMaker** for predictive modeling, and **QuickSight** for visualization, processing over **1.3 million rows** of global food price data.
- Automated data workflows using cron jobs and optimized infrastructure performance by tuning memory settings and scaling EBS volumes, cutting down manual intervention by **95%** and improving overall processing efficiency.

EXTRACURRICULAR ACTIVITIES/OTHER EXPERIENCES

- Assistant Manager** at Campus Stores for Indiana University Dining.
- Teaching Assistant** for Discrete Structures in Computer Science.
- Chairperson** of Indian Society for Technical Education.

May 2024 – May 2025

June 2024 - July 2024

Sept 2018 - May 2021
