

# PRIYA BHANDHAVI SUKKA | Software Engineer

📍 Overland Park, Kansas | ✉ priyasukka5809@gmail.com | ☎ (913) 258 - 6273 | 🔗 [Linked In](#)

## SUMMARY

- Developed robust software solutions using Python, JavaScript (ES6+), TypeScript, and C++, contributing to 20–30% performance gains in enterprise-facing modules—backed by 3+ years of experience building scalable, full SDLC systems as a Software Engineer.
- Built and deployed ML/NLP pipelines using Scikit-learn, TensorFlow, Hugging Face Transformers, and SpaCy, enabling 91%+ model accuracy in production sentiment analysis and document classification use cases.
- Designed and maintained frontend apps with React.js, Vue.js, Tailwind CSS, and D3.js, achieving 40% reduction in user journey time and enhancing UI responsiveness for 10,000+ daily users.
- Engineered scalable backend APIs using Node.js, Django, Spring Boot, and GraphQL, reducing server response time by 27% through code optimization and efficient data serialization.
- Managed structured and unstructured data using PostgreSQL, MongoDB, Redis, and Snowflake, improving query performance and storage efficiency in multi-terabyte data environments.
- Automated CI/CD workflows using Docker, Kubernetes, Terraform, and GitHub Actions, achieving 60% faster release cycles and reducing production bugs by 35% via automated testing and TDD.
- Built ETL pipelines and real-time data ingestion using Apache Spark, Kafka, Azure Databricks, and Airflow, processing over 150 million records monthly with optimized Data Lake strategies.
- Created interactive dashboards in Power BI, Plotly Dash, and Tableau, delivering real-time executive reporting that improved decision-making turnaround by 40%.
- Collaborated in Agile (Scrum) teams using Jira, Git CLI, IntelliJ, and VS Code, with ownership over 25+ production features and consistent delivery within sprint deadlines.

## TECHNICAL SKILLS

|                                                 |                                                                                                                                               |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Language:</b>                                | Python (NumPy, Pandas, Dash, Plotly), JavaScript (ES6+), TypeScript, Java, C++, C#, Go, SQL, Shell Scripting, HTML5, CSS3                     |
| <b>AI/ML &amp; LLMs:</b>                        | Machine Learning (Scikit-learn, TensorFlow, PyTorch), Deep Learning, NLP (SpaCy, NLTK), LLMs (OpenAI, Hugging Face Transformers)              |
| <b>Frontend Development:</b>                    | React.js, Vue.js, Next.js, Angular, D3.js, Tailwind CSS, Bootstrap 5, jQuery                                                                  |
| <b>Backend Development:</b>                     | Node.js, Django, Flask, Spring Boot, .NET Core, RESTful APIs, GraphQL, JSON/XML                                                               |
| <b>Databases &amp; Storage:</b>                 | Serialization                                                                                                                                 |
| <b>Cloud Platforms:</b>                         | PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Snowflake, Azure Cosmos DB, Amazon S3                                                           |
| <b>DevOps, Infrastructure &amp; Automation:</b> | AWS (EC2, S3, Lambda), Microsoft Azure Google Cloud Platform (GCP), Azure DevOps                                                              |
| <b>Big Data &amp; Data Engineering:</b>         | Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD Pipelines, Git, Agile (Scrum), TDD, Microservices, Event-Driven Architecture    |
| <b>Data Visualization &amp; BI:</b>             | Apache Spark, Azure Databricks, Data Pipelines, Kafka, SQS, Airflow, ETL Development, Data Lake Management, Snowflake Optimization            |
| <b>Tools &amp; IDEs:</b>                        | Power BI, Tableau, Microsoft Excel (Pivot Tables), Dash, Plotly<br>VS Code, IntelliJ IDEA, Eclipse, Postman, Swagger, Git CLI, Terminal, Jira |

## EXPERIENCE

### Software Engineer

#### PTC Inc. | Massachusetts | Jul 2025 - Present

- Developed ETL scripts in Python using Pandas and NumPy to automate ingestion of multi-format financial datasets, reducing manual preprocessing efforts by over 60% while ensuring data quality across 3 downstream systems.
- Rebuilt legacy user dashboards using React.js and Tailwind CSS, introducing component-level reusability and layout consistency that allowed designers and developers to launch 20+ UI features in under 4 months.
- Designed and deployed multiple Flask-based APIs to expose operational data stored in PostgreSQL, serving over 1.5M requests/month with clear Swagger documentation and token-based auth built-in.
- Integrated OpenAI GPT-3 API into a custom legal document review tool, enabling instant clause summaries and reducing average contract analysis time from 22 minutes to under 8.
- Architected scalable batch pipelines on Apache Spark and managed DAGs in Airflow, aggregating user telemetry data into Snowflake for business insights and compliance monitoring.
- Created live system health dashboards with Dash and Plotly, allowing the engineering team to identify latency spikes, dropped events, or unresponsive services within seconds.
- Containerized 12+ services using Docker and set up CI/CD flows in GitHub Actions, ensuring seamless deployments across dev, staging, and production on Azure App Services.
- Deployed Kafka for real-time message brokering between authentication, order, and notification services, reducing response bottlenecks and decoupling critical components.

**ENVIRONMENT:** Python, Pandas, NumPy, React.js, Tailwind CSS, Flask, PostgreSQL, Swagger, Token-based Authentication, OpenAI GPT-3 API, Apache Spark, Apache Airflow, Snowflake, Dash, Plotly, Docker, GitHub Actions, Azure App Services, Kafka

## Software Engineer (Intern)

**PTC Inc. | Massachusetts | Jan 2025 – Jun 2025**

- Designed and implemented a multi-threaded backend in C++ that handled ML inference requests from financial clients, with stable performance up to 90 req/sec under simulated load tests.
- Trained and deployed fraud detection models using TensorFlow and PyTorch, improving anomaly identification in transaction logs by 28% compared to baseline logistic regression model.
- Rebuilt the internal reporting platform using Node.js and GraphQL, enabling dynamic query generation and reducing the need for hard-coded filtering logic across 8 business units.
- Migrated frontend codebase from jQuery to Vue.js + Bootstrap 5, improving performance scores and bringing UI components in line with WCAG accessibility compliance.
- Automated build, test, and deploy pipelines on Azure DevOps, integrating Selenium smoke tests and release tagging to allow rollback within minutes if post-deploy checks failed.
- Leveraged Hugging Face Transformers to fine-tune BERT for classifying customer email responses, resulting in a 91% accurate model used by the CX team for prioritization.
- Conducted full migration of databases from on-prem to AWS RDS (PostgreSQL) with schema conversion and downtime cut to under 20 minutes during cutover for production workloads.
- Built Tableau dashboards to visualize and track suspicious activity trends by region and payment gateway, reducing data analysis time for the fraud team by 70%.

**ENVIRONMENT:** C++, Multi-threading, Machine Learning, TensorFlow, PyTorch, Node.js, GraphQL, jQuery, Vue.js, Bootstrap 5, Azure DevOps, Selenium, Hugging Face Transformers, BERT, AWS RDS, PostgreSQL, Tableau

## Associate Software Engineer

**BOSCH GLOBAL | India | Jan 2021 – Jun 2023**

- Used Next.js with D3.js to develop interactive web analytics tools, supporting data visualizations across over 2M records with drill-down and multi-filter capabilities for end users.
- Built a sensitive data redaction engine using SpaCy and NLTK, scanning incoming documents and removing PII before ingest into MongoDB, saving hours of manual audit.
- Utilized Redis alongside MongoDB to cache results of high-frequency API queries, reducing average response time from 1.2s to under 250ms during peak hours.
- Integrated Kafka with backend services to support an event-driven architecture for order processing, enabling real-time retries, dead-letter queues, and complete traceability.
- Delivered Power BI dashboards to Finance and Product teams, aggregating metrics from Snowflake and exposing business-critical KPIs with filters by geography, time, and product line.
- Managed containerized deployments using Kubernetes on GCP GKE, setting up readiness/liveness probes, node autoscaling, and Helm-based versioning per environment.
- Built scalable REST APIs in Django, following a clean architecture approach and including Swagger-based API documentation consumed by third-party clients.
- Used Azure Cosmos DB as a scalable multi-region store for sensor data logs, enabling analytics and retention for over 100 million records while ensuring 99.99% availability.
- Implemented conditional build logic, PR checks, and environment-specific secrets in Jenkins pipelines, automating QA, UAT, and prod deployments with rollback support.

**ENVIRONMENT:** Next.js, D3.js, SpaCy, NLTK, MongoDB, Redis, Kafka, Power BI, Snowflake, Kubernetes, GCP GKE, Helm, Django, Swagger, Azure Cosmos DB, Jenkins

---

## EDUCATION

---

🎓 **Master of Science (MS) Computer Science | Aug 2023 – May 2025**  
University of Central Missouri (UCM)

🎓 **Bachelor of Technology (B-Tech) in Electrical and Communication Engineering | Aug 2018 – Jun 2022**  
CVR College of Engineering, Hyderabad, Telangana, India

---
