Professional Summary:

- Around 7 years of IT experience as a Java Full Stack Developer in all phases of Software Development Life Cycle (SDLC), including **Analysis, Design, Development, Testing**, and Deployment of Enterprise, Web, and Client-Server applications.
- Strong knowledge of authentication & authorization mechanisms including **OAuth2, JWT**, and **Spring Security** for implementing secure applications.
- Strong expertise in Core **Java, OOPs, Collections**, Multithreading, Exception Handling, and Design Patterns, with hands-on experience in building enterprise-level solutions using **Java 8/11/17**.
- Extensive experience developing and designing web applications using Spring Framework (**Core, MVC, Security, AOP**) and **Spring Boot** for building Microservices with features like Dependency Injection, **Security, REST APIs**, and Data access integration (JPA/Hibernate).
- Proficient in implementing Microservices architecture, RESTful APIs, **SOAP services**, and API documentation using **Swagger/Open API**.
- Experience in optimizing application performance through caching strategies, asynchronous processing, and load balancing.
- Experience with persistence frameworks such as Hibernate and JPA for ORM, caching, and query optimization, along with writing complex **SQL, PL/SQL**, stored procedures, functions, and triggers in **Oracle, MySQL**, PostgreSQL, and SQL Server.
- Skilled in developing modern responsive web applications using **Angular** (2+ through 16), **React.js**, JavaScript (ES6+), TypeScript, HTML5, CSS3, **Bootstrap**, jQuery, AJAX, and JSON for Single Page Applications (SPA).
- Experience in React.js building reusable components, managing virtual DOM updates, and integrating with REST APIs for dynamic UI rendering.
- Knowledge of **Node.js** for server-side programming and building lightweight backend services.
- Experienced in version control and CI/CD tools such as **Git, GitHub/GitLab, Bitbucket**, Jenkins, Maven, and Gradle for automated builds and deployments.
- Hands-on experience with AWS cloud services (**EC2, S3, RDS, Lambda**) and containerization tools like **Docker** and Kubernetes, with exposure to Azure DevOps for cloud-based deployment pipelines.
- Worked on deployment and configuration of applications in servers like Apache Tomcat, IBM WebSphere, and WebLogic.
- Experience with distributed databases and **NoSQL technologies** such as Cassandra DB for handling high-volume transactional data.
- Skilled in using testing frameworks such as **JUnit and Mockito** for unit testing, and Postman/Selenium for API and basic UI testing.
- Exposure to monitoring and logging tools such as ELK Stack (**Elasticsearch, Logstash, Kibana**), **Splunk**, and Prometheus/Grafana for observability in production systems.
- Experienced in **Agile/Scrum** methodologies, TDD, and Waterfall models with strong collaboration, problem-solving, and communication skills to deliver high-quality, scalable software solutions.
- Involved in **code reviews, peer programming**, and mentoring junior developers to ensure adherence to coding standards and best practices.

Technical Skills:

Languages	Java (8/11/17), Python, SQL, PL/SQL, TypeScript, JavaScript
Java/J2EE Technologies	Core Java, Collections & Generics, Multithreading, JMS, EJB, Design Patterns
Frameworks	Spring (Core,MVC, Security, AOP), Spring Boot, Hibernate/JPA, Microservices Architecture
Frontend Technologies	Angular (2+ to 16), React.js, JavaScript (ES6+), HTML5, CSS3, Bootstrap, jQuery, AJAX, JSON
Web Services & API's	RESTful APIs, SOAP, Postman, Swagger/OpenAPI
Build & CI/CD Tools	Maven, Gradle, Jenkins, Git, GitHub/GitLab, Bitbucket
Cloud & Containerization	AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Azure DevOps
Application Servers	Apache Tomcat, IBM WebSphere, WebLogic
Databases	Oracle, MySQL, SQL Server, PostgreSQL, Cassandra DB
Testing Tools	JUnit, Mockito, Postman, Selenium (basic UI testing)
IDE & Tools	Eclipse, IntelliJ IDEA, VS Code, STS, IBM RAD
Methodologies	Agile/Scrum, Waterfall
Operating System	Windows, Linux, UNIX

Professional Experience:

Client: GEICO, Richardson TX
Role: Java Full Stack Developer

June 2024 – Present

Responsibilities:

- Partnered with business analysts to gather functional requirements, created design documents, **POCs**, and technical specifications to align with project goals.
- Designed and developed **Spring** Boot-based **Microservices**, leveraging **REST APIs** to integrate with distributed systems.
- Implemented **Spring Security** (JWT, OAuth2) for authentication and authorization, ensuring secure APIs.
- Developed data persistence layers using **Hibernate/JPA** with **Oracle**, **PostgreSQL**, and **MongoDB** for transactional and analytical workloads.
- Wrote complex **SQL/PLSQL** queries, stored procedures, views, and triggers to support reporting and backend operations.
- Built dynamic UIs using **Angular 14+**, **React.js**, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap ensuring cross-browser and responsive designs.
- Created reusable React.js components and integrated Redux for state management in SPAs.
- Developed backend services and real-time notification modules using **Node.js** and **Kafka Streams** API.
- Engineered real-time data pipelines using **Apache Kafka**, Spark, and **Cassandra DB**, optimizing streaming performance.
- Built and consumed **Python** Flask/Django APIs for data processing and **ML-based** insights, leveraging NumPy, **Pandas**.
- Deployed applications to **AWS (EC2, S3, RDS, Lambda)** with **IAM** policies for security.

- Containerized microservices with **Docker**, deployed with **Kubernetes**, and integrated into CI/CD pipelines with **Jenkins**, **GitLab**, **Maven**.
- Configured **Swagger/Open API** for API documentation and service discoverability.
- Performed unit testing with **JUnit**, **Mockito** and automated API testing with **Postman** to ensure system reliability.
- Following Agile Scrum practices, actively participated in **sprint planning**, daily standups, retrospectives, and **peer code reviews**.

Environment: Java 11, Spring Boot, Microservices, Spring Security, Hibernate/JPA, Angular 14/16, React.js, Node.js, Python, Kafka, Spark, AWS (EC2, S3, RDS, IAM), Docker, Kubernetes, Jenkins, GitLab, Oracle, PostgreSQL, MongoDB, Cassandra DB, Agile/Scrum.

Client: JP Morgan Chase, Plano TX

Sep 2023 – May 2024

Role: Java Full Stack Developer

Responsibilities:

- Engaged in the **complete SDLC** including design, coding, testing, and deployment of high-transaction banking applications.
- Developed **Spring Boot Microservices** and **REST APIs**, following **Microservices architecture principles**.
- Implemented **Spring MVC controllers, dependency injection, and AOP** for modular and maintainable design.
- Secured APIs using **Spring Security with JWT tokens and Role-based Access Control (RBAC)**.
- Created persistence layers using **Hibernate/JPA**, optimized queries, and managed transactions in **Oracle, SQL Server, and MongoDB**.
- Designed **Angular 8/10 components, services, modules**, and implemented **lazy loading** for better performance.
- Built reusable **React.js components**, applied **React Hooks, Redux**, and ensured optimized rendering using Virtual DOM.
- Designed and tested **SOAP (JAX-WS) and REST (JAX-RS) services**, with **Swagger/OpenAPI** documentation.
- Configured **Apache Kafka** for distributed event streaming; developed consumer/producer services for high-volume message handling.
- Designed **real-time data pipelines** integrating **Kafka and Spark**, persisted processed data into **HBase**.
- Containerized services with **Docker** and deployed them on **AWS EC2** with load balancing and monitoring using **CloudWatch**.
- Automated CI/CD processes with **Jenkins, Bitbucket, Git, Maven, Gradle** ensuring fast deployment.
- Used **JUnit, Mockito, Selenium** for automated testing across backend and frontend.
- Configured **JMS** for asynchronous communication and message-driven processing.
- Collaborated with **Agile Scrum** teams, delivered sprint goals, and participated in backlog grooming and code reviews.

Environment: Java 11, Spring Boot, Spring MVC, Microservices, Hibernate/JPA, Angular 8/10, React.js, Node.js, REST, SOAP, AWS (EC2, S3, CloudWatch), Docker, Jenkins, Git, Oracle, SQL Server, MongoDB, Kafka, HBase, Agile/Scrum.

Client: HCL Technologies
Role: Java Full Stack Developer

Aug 2020 – July 2023

Responsibilities:

- Developed **Spring Boot REST APIs** to process client requests and return JSON/XML responses.
- Created **modular Microservices** with Spring Boot, deployed in **Docker containers**, and orchestrated via **Kubernetes**.
- Implemented persistence logic with **Hibernate ORM**, managed relational data in **PostgreSQL and Oracle**.
- Designed **Angular 4/6 components, modules, forms, validations**, and used TypeScript for frontend logic.
- Integrated **React.js components** into legacy Angular applications to modernize UI.
- Configured **Kafka topics, brokers, and partitions**; implemented consumer/producer services for real-time streaming.
- Developed **Spark Streaming applications** to process incoming Kafka data and store in **HDFS**.
- Deployed applications in **AWS (SNS, SQS, EC2, CloudWatch)** and automated monitoring alerts.
- Built authentication workflows using **Spring Security and Angular validation mechanisms**.
- Created **unit tests with JUnit/Mockito**, executed **functional tests with Postman/Selenium**, and integrated with Jenkins for CI/CD pipelines.
- Used **Log4j/SLF4J** for logging and debugging across services.
- Participated in **Agile Scrum** methodology, delivered user stories, and collaborated with cross-functional teams.

Environment: Java 8, Spring Boot, Microservices, Hibernate, Angular 4/6, React.js, Node.js, Kafka, Spark Streaming, AWS (EC2, SQS, SNS, CloudWatch), Docker, Kubernetes, Jenkins, PostgreSQL, Oracle, Agile/Scrum.

Client: Molina HealthCare
Role: Java Full Stack Developer

July 2018 – Jul 2020

Responsibilities:

- Involved in **requirements analysis, design, development, testing, and deployment** of enterprise web applications.
- Built **Spring MVC Controllers, Service, and DAO layers** with dependency injection and transaction management.
- Developed **Microservices with Spring Boot** and deployed in **Apache Tomcat**.
- Used **Hibernate ORM with JPA annotations** for mapping entities and handling CRUD operations.
- Designed **AngularJS frontends** with reusable directives, controllers, and two-way binding for dynamic web pages.
- Consumed and exposed **SOAP (JAX-WS) and REST (JAX-RS) web services** for data exchange.
- Worked with **JMS** for asynchronous messaging and developed EJB MDBs for message-driven architecture.
- Designed and optimized **SQL Server queries, stored procedures, triggers, and views**.
- Implemented logging with **Log4j** and created **JUnit test cases** for unit testing of services.
- Collaborated with cross-functional teams in an **Agile Scrum environment**, delivering features on time.

Environment: Java 8, J2EE, Spring MVC, Spring Boot, Hibernate/JPA, AngularJS, JavaScript, Node.js, SOAP, REST, JMS, EJB, SQL Server, JUnit, Log4j, Tomcat, Agile/Scrum.
