

Priya Paratagouda Patil

Data Analyst

5618090376 | patilpriyap14@gmail.com | <http://linkedin.com/in/priya-patil-8b6484236>

SUMMARY

Data Analyst with around 3 years of experience in data analysis, ETL processes, business intelligence, and reporting. Skilled in leveraging advanced tools like Python, SQL, Tableau, Power BI, and Excel to deliver data-driven insights for strategic decision-making. Expertise in cloud technologies (AWS, Azure, GCP) for scalable data storage, processing, and analysis, coupled with proficiency in big data platforms like Apache Spark, Hadoop, and Azure Databricks. Adept at developing interactive dashboards, optimizing SQL queries, and implementing advanced analytics techniques, including predictive modeling and machine learning algorithms. Demonstrated ability in automating ETL pipelines, ensuring high-quality data, and collaborating with cross-functional teams to translate business needs into actionable technical solutions. Strong communicator, capable of presenting complex data insights to non-technical stakeholders for impactful decision-making.

TECHNICAL SKILLS

Languages	Python, R, DAX
Databases	MySQL, PostgreSQL, MS SQL Server, MongoDB, Hive, Cassandra, AWS RDS, AWS Redshift
Cloud Platforms	AWS (Athena, Redshift, S3, Glue, Lambda, Kinesis, EC2)
BI/Visualization:	Tableau, Power BI, Excel, Plotly, Bokeh
Big Data	Apache Spark, Hadoop, HBase, PySpark, Databricks
Machine Learning	Scikit-learn, TensorFlow, H2O.ai, K-means clustering, Regression Analysis, Decision Trees, Random Forest, Gradient Boosting, Clustering, Hypothesis Testing.
DevOps/Version Control	Git, DVC, Docker, Kubernetes
Monitoring/Alerting	AWS CloudWatch, Prometheus
Web Technologies	HTML, CSS, JavaScript
Methodologies	Agile, Scrum
Tools	Tableau, Power BI, Excel, Jupyter Notebook, Jira, Git, Docker, Apache Airflow, Apache Spark, Apache Kafka, Kubernetes, Jenkins, DVC (Data Version Control)
OS	Windows, MacOS, Linux/Unix

EDUCATION

- **Master's in Data Science – New England College, 98 Bridge St, Henniker, NH**
- **Bachelor of Engineering in Sri Taralabalu Jagadguru Institute of Technology, India**

PROFESSIONAL EXPERIENCE

Prudential Financial, Newark, NJ

Data Analyst | Dec 2023 – Present

Responsibilities:

- Designed and developed ETL workflows using Python and AWS Glue, improving data processing efficiency and reducing manual intervention by 25%.
- Automated data ingestion and transformation from SQL, MySQL, and cloud-based sources (AWS Redshift, Snowflake), ensuring high data integrity and accuracy.
- Created dynamic Tableau and Power BI dashboards with advanced filters and parameters, providing real-time insights for stakeholders to drive data-driven decision-making.
- Built and deployed machine learning models (Linear Regression, Decision Trees, and Clustering) using Python (Scikit-Learn, PySpark) and AutoML frameworks for predictive analytics and operational efficiency.
- Managed and processed large datasets using big data platforms like Apache Spark, Databricks, AWS S3, and AWS Athena, enabling real-time analytics and reporting.
- Implemented CI/CD practices for automating ETL pipeline deployments using Jenkins, improving workflow efficiency.
- Applied advanced statistical techniques (A/B testing, hypothesis testing, and regression analysis) to identify key business drivers and inform strategic decisions.
- Developed RESTful APIs using Flask, automating data retrieval processes and reducing system latency by 20%.
- Leveraged DVC (Data Version Control) for versioning data pipelines and tracking data changes across models and workflows.
- Collaborated with cross-functional teams to translate business requirements into technical solutions, optimizing data pipelines and reducing manual processes by 30%.
- Migrated on-premises data infrastructure to AWS Redshift, improving scalability and reducing operational costs by 15%.
- Used AWS Lambda and Step Functions to automate scheduled jobs, improving data workflow automation and reducing manual intervention.
- Provided actionable insights through data visualization and trend analysis, helping to optimize business performance and revenue by identifying key operational inefficiencies.
- Designed scalable and secure data architecture, optimizing cloud resources and implementing cost-effective solutions for large-scale analytics.
- Implemented advanced data quality frameworks using Great Expectations to ensure high accuracy and consistency across datasets.
- Set up monitoring and alerting mechanisms using AWS CloudWatch to track ETL performance and identify anomalies in real time.
- Processed unstructured data, such as logs and JSON files, for deeper analytics using PySpark and AWS Glue.

Environment: Python, SQL, AWS Glue, AWS Redshift, AWS S3, AWS Athena, Apache Spark, Databricks, Power BI, Tableau, Flask, Jenkins, DVC, AWS Lambda, Step Functions, Great Expectations, CloudWatch.

Paytm, India

Data Analyst | Jan 2021 - Nov 2022

Responsibilities:

- Led the development of automated ETL pipelines using Apache Airflow and Informatica, reducing manual effort and streamlining data processing workflows by 30%.
- Created dynamic Tableau dashboards for real-time monitoring of business KPIs, improving decision-making speed and enhancing data visibility for stakeholders.
- Utilized Python for advanced analytics, including predictive modeling, regression analysis, and clustering techniques, delivering actionable business insights.
- Processed and transformed large datasets using Pandas and NumPy, ensuring data quality and preparing it for analysis and reporting.
- Built ETL processes with AWS Glue and SQL, integrating data from multiple sources for seamless data flow into cloud-based environments.
- Collaborated with data engineers and business stakeholders to define data governance strategies and establish best practices for data management and quality assurance.
- Developed machine learning models using Scikit-Learn to forecast customer behavior, enabling more targeted marketing campaigns.
- Migrated data to AWS Redshift using AWS DMS, improving storage efficiency, data access speeds, and query performance.
- Integrated data validation checks within ETL pipelines, ensuring high data accuracy and consistency across all reports.
- Performed root cause analysis to identify and correct anomalies in large datasets, improving overall data reliability.
- Collaborated with executives and stakeholders to define data-driven opportunities, translating business requirements into technical solutions with measurable KPIs.
- Developed Power BI dashboards with interactive elements such as slicers, bookmarks, and custom tooltips, enhancing the end-user experience and report navigation.
- Worked with AWS services (S3, EC2, Lambda) for data storage, processing, and cloud-based analytics, contributing to scalable data solutions.
- Set up real-time data processing pipelines using Kafka and AWS Kinesis, ensuring low-latency data delivery for analytics.
- Implemented robust metadata management strategies, creating data catalogs for discoverability using AWS Glue Catalog.
- Applied customer segmentation techniques using clustering models for targeted marketing campaigns and improved ROI.
- Established monitoring systems with Prometheus to track pipeline performance and ensure timely error resolution.

Environment: Python, SQL, Pandas, NumPy, Scikit-Learn, Apache Airflow, Informatica, AWS Glue, AWS Redshift, AWS DMS, Kafka, AWS Kinesis, Tableau, Power BI, Prometheus, AWS S3, AWS EC2, AWS Lambda.
