WORK EXPERIENCE

Data Analyst | VVRA LLC

May 2024 - Present

- Analyzed 500K+ vision insurance claims to identify usage trends and gaps, enabling targeted outreach that increased preventive care engagement
- Designed interactive dashboards for stake holders using Power BI, providing real-time insights into KPIs and claims trends, reducing reporting time.
- Performed customer segmentation by age, geography, and plan type, enabling personalized outreach campaigns that increased engagement.

Data Analyst | Northeastern University

May 2023 – Dec 2023

- Designed analytical roadmaps and built a framework using NLP and semi-supervised LDA on unstructured text data in python to identify insights into patient experience and value-based care
- Built an ARIMA Time series model in R to forecast the weekly/ monthly inflow of patients in each clinic with MAPE 14%
- Analyzed KPIs, shifts, trends and presented it to senior management using interactive Tableau decision dashboards

Data Analyst | Accenture

Sep 2020 - Aug 2022

- Conducted cohort analysis on various customer attributes and translated analytical insights into a targeted marketing campaign that increased customer retention by 17%, ensuring clear communication with stakeholders.
- Implemented comprehensive pricing analysis, incorporating competitive pricing, historical spending patterns by different cohorts, and cannibalization effects to determine optimal prices for introducing new class formats
- Aggregated data from multiple sources into a unified dataset using SQL queries, reducing report generation time by 40%
- Utilized A/B testing to determine the optimal number of classes for various package and the best scheduling times for classes
- Performed spatial analysis across the US to identify region-specific customer purchase patterns, driving targeted marketing campaigns and achieving a 13% increase in sales in low-performing zones.

Data Analyst | Myntra

Jan 2020 - Aug 2020

- Forecasted product demand by conducting time series analysis on historical data, optimizing inventory management, and resulting in a 9% reduction in inventory costs and 4% increase revenue during peak periods
- Developed an interactive Tableau dashboard to integrate sales and inventory data for identifying top-selling products, inventory turnover, and dead stock across categories.
- Defined new KPIs for product by aggregating data across sales and inventory into a new table using SQL queries

EDUCATION

Northeastern University, Boston, MA

Masters in Information Systems

Related Coursework – Machine learning, Predictive Analytics, Web design, UI/UX, Database management, Project Management

Jawaharlal Nehru Technological University, Hyderabad, India

Bachelors in Information Technology

TECHNICAL SKILLS

Languages	: Python, R, SQL, MATLAB, Java, Java Script
Tools	: Tableau, Power BI, Quicksight, Excel, Statistica
Databases	: MySQL, MongoDB, DynamoDB, Redshift, Oracle, NoSQL, PL/SQL, DDL, MDX
Specialties	: Data Manipulation, Data Visualizations, NLP, Data Clustering, Data Cleaning
Statistical Techniques	: Hypothesis Testing, Time Series, Regression Analysis, Statistical Analysis, A/B Testing, t-testing

PROJECTS

Amazon sales performance Analysis (Python, Data Visualization, EDA)

- Analyzed Amazon product reviews and ratings data to uncover key drivers of sales performance using Python, Pandas, and visualization libraries working across structured, unstructured, and categorical features to generate actionable insights.

AI Image Classification Project (CCN, Generative AI, Image Dataset Curation)

- Built and fine-tuned a CNN model for AI image classification using a curated dataset of 100K real and generative images, achieving high model accuracy.

Urban Sound Classification Project (Python, Librosa, UrbanSound8K)

- Built and evaluated a sound classification model using the UrbanSound8K dataset, extracting audio features to classify diverse urban sounds like sirens, dog barks, and street music.
