

PRIYANKA RAVULA
Dallas, TX
Certified Full Stack Java Developer
G-Mail: priyaravula23@gmail.com
Contact: 945-249-2869

SUMMARY

Highly skilled with 10+ years of hands-on experience in various technical phases of the Software Development Life Cycle (SDLC), with a strong focus on Object-Oriented design, Java/J2EE, and Client-Server technologies.

- Experienced Cloud Engineer and Software Developer with expertise in deploying and managing scalable applications on Google Cloud Platform (GCP) and Pivotal Cloud Foundry (PCF). Proficient in developing robust backend services using Golang and Kotlin, leveraging cloud-native architectures to drive efficiency and performance. Skilled in CI/CD pipelines, container orchestration, and microservices design. Adept at collaborating in agile teams to deliver innovative cloud solutions.
- Successfully implemented various design patterns, including Singleton, Factory, Prototype, Business Delegate, Session Facade, Service Locator, Visitor, Observer, Decorator, Front Controller, DAO, and MVC.
- Proven track record in designing and developing robust and highly scalable Web Service platforms and APIs based on REST and SOAP, utilizing AXIS, WSDL, UDDI, XML, JAX-WS, JAX-RS, JAXB, JAX-RPC technologies, and Jersey frameworks.
- Advanced knowledge of XML technologies such as XSL, XSLT, XML schemas, XPath, X- forms, XSL-FO, SAX, and DOM.
- Proficient in a range of methodologies, including Agile, Waterfall, and Test-Driven Development, with a track record of successfully developing applications.
- Demonstrated expertise in front-end technologies such as HTML5, CSS3, jQuery, JSON, Ajax, React, Redux, NodeJS, Bootstrap, Tag Libraries, and JSTL, consistently delivering seamless user experiences.
- Well-versed in Java 8 features, including Lambdas Expressions, Time API, Streams, functional interfaces, Collectors, default methods, type interfaces, and for each.
- In-depth Knowledge of computer applications and scripting like Shell (c, bash), Perl and Python.
- Exceptional proficiency in developing web applications using Spring framework modules like Spring IOC, Spring AOP, Spring MVC, Spring Security, Spring Boot, Spring Batch, and Spring Data.
- Proven ability in designing data models using Hibernate Object-relational mapping (ORM) framework, optimizing configurations with Hibernate Annotations.
- Extensive experience across various databases, including Oracle, MySQL, SQL Server, IBM DB2, and MongoDB.
- Proficiently worked with JMS for asynchronous information exchange using Active MQ, RabbitMQ, and Kafka, with expertise in Apache Kafka for integration and Data Processing with Spring.
- Expert in building automation tools, notably Gradle, Maven, and Ant.
- Adept at performance tuning, optimizing SQL queries, and ensuring the scalability and responsiveness of database systems.
- Versatile with a range of IDEs, including Eclipse, RAD, Spring Tool Suite, IntelliJ, and deployment using Application Servers such as Apache Tomcat, BEA WebLogic, WebSphere, Glassfish, Camel, and JBOSS.
- Utilized JUnit, Mockito, and Log4j for developing comprehensive test cases and ensuring application functionality.
- Experienced in UNIX/LINUX Shell Scripting and proficient in tools like Kubernetes, GIT, Tortoise SVN, and Visual Source Safe.
- Provided training and expertise in Kubernetes administration.
- Exceptional communicator with strong analytical capabilities, excelling in multitasking and contributing effectively as both an individual contributor and a team player.
- Proficient in Continuous Integration (CI) and Continuous Deployment (CD) practices, utilizing Jenkins and Travis CI to automate software builds and deployments.
- Strong knowledge of containerization technologies like Docker and Kubernetes for efficient application packaging,

scaling, and management.

- Familiar with NoSQL databases such as MongoDB, Cassandra, and Redis, enabling efficient data handling for various applications.
- Experienced in implementing DevOps practices and collaborating with cross-functional teams to streamline development processes and shorten release cycles.
- Demonstrated ability to troubleshoot complex technical issues, providing timely resolutions to ensure minimal downtime.
- Actively engage in continuous learning and staying updated with the latest industry trends and emerging technologies to drive innovation and maintain a competitive edge.
- Proven experience in mentoring and guiding junior team members, fostering a culture of knowledge sharing and skill development.
- Profound understanding of microservices architecture, enabling the development of highly modular and scalable software systems.
- Proficient in version control systems like Git and SVN, ensuring effective code collaboration and version management.
- Strong knowledge of RESTful API design principles and best practices, facilitating seamless integration between different software components.

TECHNICAL SKILLS

Programming Languages: C, C++, Java, J2EE, PL/SQL, Python, Golang, TypeScript, Groovy/Grails, RMI.

Tools and Framework: Struts (including Jakarta Struts), Spring (including Spring 3.0/4.0, Spring MVC, Spring IOC, Spring AOP, Spring Security, Spring Boot, Spring Inheritance, Spring ORM with Hibernate, Spring Web Flow, Spring RESTfulAPI), Hibernate (including Hibernate 3.0/4.0, Transaction Management, Batch Transactions, Cache), JSF, JUnit, SOAP UI, J Report, Kubernetes, jBPM, Jersey JAX-RS, EJB, Power Connect, PCF

J2SE/J2EE Technologies: Java, J2EE, RMI, Sockets, JDBC, Servlets, JSP, JMS, Java Beans, JSTL, JSF, Jakarta Struts, EJB, Spring, Hibernate, JTA, JNDI, JPA, JMS, Web Services (including JAX-RPC, JAX-WS, SOAP, REST, WSDL, UDDI, RESTFUL), Groovy/Grails.

Web Technologies: HTML5, CSS3, JavaScript, React, Redux, NodeJS, jQuery, Bootstrap, JSF, AJAX, NodeJS, JSON Restful, Backbone.js.

XML Technologies: XML, XSL, DOM, SAX, DTD, XQuery, XSD and XSLT.

Databases: Oracle, SQL-Server, MySQL server, MS SQL, IBM DB2, Amazon, MongoDB, NoSQL.

Web/Application Servers: Apache Tomcat, IBM WebSphere (including WebSphere Portal Server), Web logic Application, JBOSS.

Build Tools: ANT, Maven, Gradle, Docker and Jenkins (including Jenkins CI/CD)

IDE / Tools: Eclipse, IntelliJ, Spring Tool Suite (STS), RAD, VS Code

Testing Tools/ Others: JUnit, Mockito, Soap UI, Log4j, JIRA, Jasmine, JMeter, Apache Kafka, Apache AXIS, Change Management, Multi-Threaded Programming, UnixShell Scripts

Version Control: Tortoise SVN, CVS and GIT

Platforms: Windows, Mac, Linux, and Unix.

Methodologies: Agile, Waterfall, Test Driven Development

EDUCATION & CERTIFICATIONS

- Masters from Osmania University, Hyderabad, India - 2012
- Bachelors from Bhoj Reddy College of Engineering, Hyderabad, India - 2008
- Oracle Certified Java Programmer (OCJP 6)
- Certified AI-ML (Artificial Intelligence-Machine Learning) from IIIT (Indian Institute of Information Technology)

PROFESSIONAL EXPERIENCE

Client: Abbott Laboratories, Irving, Texas

Nov 2024 – Till Date

Role: Full Stack Java Developer

Responsibilities

- Engaged in full SDLC analysis and design, ensuring detailed planning prior to development phases.
- Migrated legacy Java applications to Java (8/11/17) and later enhanced with Java 21 features (pattern matching,

sealed classes) improving performance and maintainability.

- Designed and developed secure, scalable RESTful and GraphQL APIs supporting dynamic frontend apps with Angular 17, React 16/17, and Vue.js.
- Developed and deployed cloud-native applications on Pivotal Cloud Foundry, ensuring high availability and scalability of services.
- Designed backend microservices in Golang and Kotlin, optimizing performance and reducing latency
- Managed infrastructure and deployments on Google Cloud Platform using Terraform and Kubernetes.
- Implemented CI/CD pipelines using Jenkins and GitLab, improving release cycles
- Collaborated with cross-functional teams to migrate legacy applications to PCF and GCP, enhancing reliability and reducing operational costs.
- Monitored application performance and system health using Prometheus and Grafana dashboards.
- Integrated OAuth 2.0 and JWT for robust authentication and role-based authorization in microservices environments.
- Implemented Drools-based rule engines optimizing financial policy processing and business rules management.
- Configured and optimized Kafka 2.7 Streams for real-time, high-throughput data processing pipelines.
- Led containerization and orchestration efforts with Docker and Kubernetes 1.24 for seamless cloud deployment.
- Collaborated with HR and department leads through HRP for strategic workforce planning and talent skill gap assessments.
- Enhanced legacy JavaScript codebases by migrating to TypeScript, improving maintainability and code quality.
- Developed enterprise-grade backend services with Node.js, Express.js, and Scala leveraging functional programming paradigms.
- Built responsive and SEO-friendly server-rendered React applications using Next.js and modular Angular 15 apps with TypeScript support.
- Developed microservices with Spring Boot 2.5, implementing complex business logic and seamless frontend integration.
- Automated CI/CD pipelines with Jenkins and GitLab for faster, reliable build, test, and deployment cycles.
- Designed NoSQL schemas and optimized MongoDB queries using aggregation pipelines and indexing strategies.
- Created scalable data ingestion pipelines using Apache Kafka, Flume, and Hadoop clusters for big data analytics.
- Built real-time streaming applications with Flink 1.12 modules for efficient serialization and event-driven processing.
- Implemented RESTful APIs in Rails and PHP Laravel for secure user management and client-server communication.
- Developed Android applications using Kotlin and Java adhering to modern mobile development best practices.

Environment: Python, Java 8/11/17, C#, TypeScript, Spring MVC, Spring Boot, Hibernate, Flask, Django, Ruby on Rails, .NET Core, Node.js with Express.js, Golang, Apache Kafka, Angular, React, Vue.js, Next.js, Docker, Kubernetes, OpenShift, Terraform, Ansible, Chef, Puppet, GitLab, Jenkins, GitHub, Maven, Gradle, Jenkins, MySQL, PostgreSQL, Oracle, DB2, Cassandra, MongoDB, HTML5, CSS3, Bootstrap, jQuery, Hadoop, PySpark.

Client: National Institute of Health, Hybrid to Rockville, MD

Jan 2024 – Oct 2024

Role: Sr. Java Full Stack Developer

Responsibilities:

- Implemented cloud-native microservices on PCF using Golang and Kotlin, achieving improved fault tolerance and scalability.
- Automated infrastructure provisioning on GCP with Terraform, reducing manual configuration errors
- Built and maintained CI/CD pipelines using Jenkins and GitLab CI for streamlined deployments.
- Collaborated with development teams to containerize applications with Docker and deploy on Kubernetes clusters.
- Conducted performance tuning and load testing to optimize service response times and reduce resource usage.
- Developed backend services in Kotlin and Golang for financial applications hosted on PCF.
- Assisted in migrating legacy applications from on-premise servers to GCP and PCF environments.
- Integrated monitoring and alerting solutions with Prometheus and Grafana to ensure uptime and SLA compliance.
- Participated in Agile ceremonies and contributed to sprint planning and code reviews.
- Designed and deployed a hybrid cloud architecture integrating PCF and GCP, improving application availability across regions.
- Developed Golang microservices for high-throughput data processing, reducing batch job times

- Automated deployment pipelines and integrated security scanning tools to enhance release quality.
- Used standard Python modules e.g. CSV, robot parser, iter tools, pickle, jinja2, XML for development.
- Designed and implemented high-performance Java 17 microservices, breaking down monolithic systems into modular components for scalability and maintainability.
- Leveraged asynchronous programming models to optimize performance in microservices, ensuring efficient resource utilization.
- Implemented advanced caching strategies to reduce latency in data retrieval and improve system responsiveness.
- Utilized Spring Boot for rapid prototyping and Spring MVC for building scalable web applications, ensuring robustness and maintainability.
- Developed responsive web interfaces with HTML5, CSS3, Bootstrap, and JSP, optimizing layouts for various screen sizes and resolutions.
- Designed and implemented scalable microservices architecture using Java 17 and Spring Boot, supporting high availability and fault tolerance.
- Developed frontend applications with React (Next.js) and Angular 15, improving user experience and performance
- Led data processing pipelines using Apache Spark, Flink, and Kafka Streams for real-time analytics and event processing.
- Automated CI/CD pipelines using Jenkins and GitLab CI, reducing deployment time by 40%.
- Integrated OAuth 2.0 and JWT for secure API authentication and authorization across distributed systems.
- Coordinated cross-functional teams using Agile methodologies for iterative delivery and continuous improvement.
- Built RESTful APIs and GraphQL endpoints with Node.js and Django, serving mobile and web clients.
- Managed databases including MySQL, PostgreSQL, and MongoDB; optimized queries and indexing for high-load systems.
- Containerized applications with Docker and orchestrated deployment using Kubernetes 1.24 clusters.
- Developed automated web scrapers for data extraction and integration into business intelligence systems.
- Collaborated on implementing Drools rule engine for business logic automation.
- Crafted visually appealing and responsive user interfaces using HTML5, CSS3, Bootstrap, and JSP.
- Ensured a seamless and consistent user experience across various devices and screen sizes through responsive design techniques.
- Created interactive data visualizations using React and D3.js, enhancing user engagement with dynamic charts and graphs.
- Implemented client-side routing in React Router to enable seamless navigation and improve page load performance.
- Utilized web workers for parallel processing of computationally intensive tasks, preventing UI freezes and ensuring a smooth user experience.
- Built dynamic, interactive frontend components using React and JavaScript, enhancing user interactivity and engagement.
- Enhanced application responsiveness through AJAX for asynchronous data retrieval, resulting in faster and more responsive web applications.
- Implemented robust security measures using Spring Security, OAuth, and JWT, safeguarding applications against unauthorized access and data breaches.
- Orchestrated container deployment using Docker and Kubernetes, simplifying application deployment, scaling, and maintenance.
- Integrated Log4J for application logging and monitoring, providing real-time insights into system health and performance.
- Administered token-based authentication and authorization mechanisms, ensuring secure access control and data protection.
- Collaborated closely with database teams, effectively utilizing SQL, PL/SQL, and Hibernate for efficient Oracle database interactions.
- Integrated MongoDB into applications, providing flexible and scalable document-based data storage solutions.

Environment: Agile Methodology, Java 17, J2EE, HTML5, CSS3, Ajax, Bootstrap, JavaScript, React, Hibernate, Spring MVC, Spring IOC, Spring Boot, Spring Security, OAuth, XML, AWS, GIT, JSP, JUnit, J Report, Kubernetes, Maven, IBM WebSphere, Apache AXIS, JAX-WS, Restful Microservices, Log4J, Oracle, MongoDB, Docker, JIRA, and Spring Tool Suite.

Client: AT&T, Dallas, Texas
Role: Full Stack Java Developer

Feb 2023 – Dec 2023

Responsibilities:

- Collaborated closely with database teams to ensure optimized data solutions.
- Employed SQL and PL/SQL for relational data handling, ensuring efficient and secure data transactions.
- Integrated MongoDB for flexible and scalable document-based data storage, supporting the application's diverse data needs.
- Developed a readable and simple curriculum for the average user to get started with Python.
- Worked with companies to implement Python programming and train on-site Python Programmers
- storage solutions.
- Leveraged Kubernetes to ensure a consistent and scalable deployment environment, facilitating the seamless release and operation of sports technology applications.
- Utilized Docker containers for consistent environment setups, aiding in smooth and reliable application deployments.
- Adopted Git for efficient version control, ensuring code consistency and facilitating collaboration among team members.
- maintained scalable data pipelines using Apache Spark, Flink, and Kafka to support real-time analytics and business intelligence.
- Developed and deployed microservices in Java 21 and Spring Boot on Kubernetes clusters to process and serve streaming data.
- Automated container builds and deployments leveraging Docker, Jenkins, and GitLab CI, improving release velocity
- Implemented secure APIs with OAuth 2.0 and JWT for multi-tenant data platforms.
- Collaborated with data scientists and analysts to optimize Hive and Hadoop queries for faster data retrieval.
- Delivered full-stack applications using Django, React, Angular, and Node.js, enhancing client-side features and backend logic.
- Managed NoSQL databases like MongoDB and Cassandra to support scalable data storage and querying needs.
- Used Drools for dynamic business rule management and automation.
- Implemented OAuth and JWT for token-based authentication and authorization.
- Established and maintained CI/CD pipelines with Jenkins, streamlining the software release process and improving the team's deployment efficiency.
- Preferred VS Code as the primary development tool, utilizing its advanced features for efficient code crafting, debugging, and deployment.
- Implemented various types of web services, enhancing communication between software components, and improving functionality and user experience.

Environment: Agile Methodology, Java8, TypeScript, JavaScript, React, Node JS, Spring Boot, Spring Security, SQL, PL/SQL, Web Services, Mongo DB, GIT, Jira, VS Code, Kubernetes, Docker, Jenkins CI/CD.

Aspire Systems India Pvt Ltd, India
Senior Full Stack Developer

Nov 2018 - Aug 2022

- Designed and implemented web applications using Spring MVC, Hibernate, Angular (4 & 7), Vue.js, React.js (with Redux & GraphQL), and Django REST APIs. Developed SPAs with real-time data integration and dynamic UI components.
- Built secure, scalable RESTful APIs with C# (ASP.NET Core), Node.js, Laravel, and Spring Boot. Migrated SOAP services to REST with comprehensive unit testing (JUnit 5, Mockito).
- Designed and optimized PostgreSQL, MySQL, MongoDB (with sharding & security), Cassandra clusters, Redis caching, and Snowflake migrations. Improved query performance with stored procedures, triggers, and SQL tuning.
- Developed full-stack web applications using Spring MVC, Hibernate, and Angular 7, integrating RESTful services for dynamic user experiences.
- Created detailed technical design documents, including class, sequence, and activity diagrams for complex use cases.
- Planned and configured Cassandra clusters to ensure scalable, high-performance data storage solutions.
- Designed and developed scalable microservices using Golang and Kotlin, deployed on PCF and managed via

Kubernetes clusters.

- GCP infrastructure provisioning using Terraform, improving infrastructure consistency and deployment speed.
- Implemented CI/CD pipelines using Jenkins and GitLab CI, reducing manual deployment effort
- Integrated logging and monitoring tools (Prometheus, Grafana) to improve observability and reduce mean time to recovery (MTTR).
- Collaborated with product owners and QA teams to ensure timely delivery of high-quality features.
- Developed backend services in Kotlin and Golang for cloud-hosted applications on PCF.
- Automated deployment and scaling processes for cloud applications on GCP and PCF environments.
- Participated in migration efforts from legacy infrastructure to cloud platforms, increasing system reliability and performance.
- Conducted code reviews, unit testing, and troubleshooting to maintain high code quality and performance standards
- Built reusable custom libraries using Object-Oriented Programming (OOP) concepts to streamline business logic.
- Configured MongoDB with sharding, security, monitoring, and backup strategies for reliable database management.
- Developed serverless backend functions with Next.js API routes to optimize frontend-backend integration.
- Designed and optimized PostgreSQL database schemas and queries to improve data retrieval efficiency.
- Created secure RESTful APIs using C# and ASP.NET Core to support business-critical applications.
- Integrated Django REST APIs for seamless frontend and backend communication.
- Automated documentation and reporting workflows using Java tools integrated with IBM DOORS.
- Configured Jenkins pipelines to automate continuous integration and deployment processes.
- Deployed microservices to Kubernetes clusters ensuring scalability, load balancing, and fault tolerance.
- Developed dynamic UI components using JSF with backing beans and custom validation logic.
- Created real-time executive dashboards using ELK stack (Elasticsearch, Logstash, Kibana), Graphite, and Redis.
- Implemented messaging solutions using Apache Camel and JMS (ActiveMQ) for reliable asynchronous communication.
- Built responsive, modular UIs with Bootstrap, Vue.js, Angular, and React.js, enhancing user engagement.
- Utilized Kotlin coroutines in Spring Boot applications for efficient asynchronous backend processing.
- Migrated and optimized databases from SQL Server to Snowflake, leveraging Python and SnowSQL for ETL workflows.
- Developed microservices architectures using Spring Boot, Node.js, Kubernetes orchestration, Docker containerization, and Azure cloud migrations. Automated CI/CD pipelines with Jenkins.
- Created large-scale data integration scripts (Hive, Shell, Python) and implemented complex CAMUNDA workflows to automate REST API processes.
- Developed responsive and modular user interfaces using Bootstrap, CSS3, HTML5, JavaScript, jQuery, AngularJS filters, and Webpack optimization.
- Implemented messaging solutions using Apache Camel, JMS (ActiveMQ), and Enterprise Integration Patterns (EIP) for reliable communication workflows.
- Automated testing and reporting with Gatling, Scala, Java-based IBM DOORS tools; optimized multi-threaded Java 8 Stream pipelines; enhanced Groovy and UNIX scripting for performance.
- Utilized Kotlin coroutines for asynchronous backend processing, Golang for algorithmic optimization, Ruby on Rails with third-party gem integrations, and contributed to open-source C++ projects.

Environment: Java 8/11, Spring Boot, Hibernate, Struts, Kotlin, C#, Golang, Python, Ruby on Rails, Node.js, Next.js, ASP.NET Core, Django, Angular, React.js, Vue.js, Bootstrap, jQuery, GraphQL, Kafka, Apache Camel, Redis, MongoDB, Cassandra, PostgreSQL, MySQL, Snowflake, Elasticsearch, Jenkins, GitLab CI/CD, Docker, Kubernetes, GCP, UNIX/Linux, Webpack, SOAP, REST APIs, OAuth 2.0, JWT, HTML5, CSS3.

Reinvision Labs Pvt Ltd, India

Feb 2014 – Nov 2018

Java Backend Developer

- Developed and deployed backend applications using Java 7/8, Spring MVC, Hibernate, and RESTful web services for business logic and persistence layers.
- Designed and implemented Spark jobs on Cassandra for data validation and loading from Oracle RDBMS.
- Created custom business logic libraries using Object-Oriented Programming (OOP) principles for reusable and maintainable code.
- Integrated and secured web APIs using Swagger and MQ messaging for seamless service communication.

- Utilized JEE standards and MVC architecture with Spring Framework to develop enterprise applications.
- Managed project dependencies and automated build processes using Maven.
- Set up and maintained Jenkins CI/CD pipelines, ensuring automated deployment and testing processes.
- Implemented system integration and data exchange using Apache Camel and JMS.
- Handled mainframe integration with JCL, including CICS and IMS transaction processing.
- Optimized Java code, managed UNIX scripts, and improved SQL performance for backend operations.
- Utilized Agile project management tools like JIRA, Trello, and Asana to track progress and manage sprints.
- Developed single-page applications (SPAs) using AngularJS (1.x), React 0.14, and JavaScript for dynamic UI development.
- Utilized factory objects in React 0.14 to enhance maintainability and reduce code redundancy.
- Integrated dynamic data fetching using AJAX and jQuery for seamless user experiences.
- Designed interactive and user-friendly UIs with HTML5, CSS3, and Bootstrap components.

Environment: Java (7, 8), JEE, Spring MVC, Spring Boot, Hibernate, Python, Apache Spark, Cassandra, Oracle RDBMS, Maven, Swagger, MQ, Apache Camel, JMS, UNIX Shell Scripting, AngularJS (1.x), React 0.14, JavaScript, jQuery, AJAX, HTML5, CSS3, Bootstrap, Jenkins, Azure, Cassandra, Oracle RDBMS
