

PRIYANKA MADHUNATHUNI

priyam.s2022@gmail.com | +1 (940) 331-4311 | [LinkedIn](#) | [GitHub](#) | [HackerRank](#)

SUMMARY:

Motivated Entry-Level Software Developer skilled in full-stack development, object-oriented programming, and cloud deployment. Proficient in Java, Python, JavaScript, React.js, Node.js, SQL, and AWS, with a solid grasp of SDLC, Agile Environment, Software Engineering, Consumer Technology, Business Requirement, Analytics, Data Warehouse, data structures, and network security. Passionate about building Innovative Solutions and scalable solutions, especially in financial technology and the healthcare sector, with a keen focus on operational excellence and Financial Coaching in software product management. Eager to contribute technical skills in a collaborative, client-facing environment, particularly in Product Management, and leverage my Domain Knowledge to drive projects forward.

PROFESSIONAL EXPERIENCE:

Charter Communications | Dallas, TX

Software Development Engineer | Jan'23 – Present

- Developer highly responsive, user-centric web apps using Angular 17+ and React (Hooks, Redux Thunk, HOC), built with clean, modular HTML5, CSS3 and W3C accessibility standards for inclusive, cross-device performance usability.
- Designed and implemented scalable, maintainable front-end solutions integrated with Java Spring boot micro services, ensuring efficient API communication and robust data handling.
- Leveraged NX mono-repo & micro-frontend architecture to develop modular, high-performance applications with independent deployment and code reuse.
- Integrated ag-Grid to create dynamic, interactive data tables with advanced features like sorting, filtering and pagination, enhancing complex data management.
- Utilized Angular Material for Angular and MUI for react to build consistent, accessible, and easy-to-use interfaces.
- Ensured application quality and reliability by writing thorough unit tests with Jest and optimizing front-end and backend performance to deliver fast, responsive user experiences.
- Collaborated with business stakeholders and technical teams to ensure high-quality Technical Solutions through regular code reviews, maintaining strong coding standards that meet Engineering Process requirements.
- Designed and integrated RESTful APIs using Node.js, Express.js, AJAX, and JSON, improving data retrieval speed by 30% while ensuring seamless front-end integration with the existing Information System.
- Implemented security measures and utilized design patterns to create modular architecture, protect financial systems from potential threats and vulnerabilities.
- Spearheaded backend development with Java, Spring Boot, and Hibernate, boosting application response times by 20% and reducing server downtime by 15%.
- Led database optimization efforts in MySQL, PostgreSQL, and MongoDB, utilizing Big Data techniques and Data Engineering, refining Query Optimization strategies and indexing techniques to enhance retrieval speeds by 25% and reduce storage costs by 18%.
- Managed full-stack development environments, configuring Apache web servers to host web applications, and containerized Flutter and Android SDK applications using Docker, reducing deployment time by 20% with a focus on load balancer optimization.
- Deployed 8+ applications on AWS (EC2, S3, RDS), implementing CI/CD pipelines with Jenkins and Docker, which cut manual deployment efforts by 50% and improved release cycles by 30%. Engaged in continuous improvement with Systems Design principles that adhere to Data Governance protocols.
- Automated unit testing (JUnit, Mockito) and UI testing (Selenium, Cucumber, Jasmine), achieving 90% test coverage and reducing production defects by 35%.
- Utilized Firebase for backend services, real-time data synchronization, and cloud functions, enhancing application performance by 20%.
- Strengthened security compliance and accessibility by implementing WCAG guidelines and encryption techniques, ensuring 100% adherence to industry standards.
- Reduced infrastructure costs by 15% by containerizing applications using Docker and optimizing load balancers, ensuring high availability.
- Collaborated with cross-functional teams to refactor legacy codebases, enhancing system performance by 40% while maintaining version control through Git and GitHub.
- Created the monitoring dashboards and alerts with Splunk and Grafana to track app performance and quickly respond to issues.

Cognizant | Hyderabad, India

Software Developer | Jul'20 - Oct'21

- Developed Java-based web applications using Spring Boot, Hibernate, and RESTful APIs, increasing application efficiency by 25% while ensuring 99.9% system uptime in a highly Agile Environment.
- Contributed software design and technical design meetings to clarify Business Requirements and inspire innovation with a focus on Communication.
- Engineered React.js and TypeScript interfaces with responsive Bootstrap-based designs like HTML/CSS, improving user engagement by 30% and reducing UI-related defects by 40%.
- Designed and implemented authentication and authorization features using Spring Security, reducing unauthorized access incidents by 40%.
- Optimized backend performance using Node.js by streamlining MySQL queries, reducing API response times by 35% and database load by 20%.
- Implemented AJAX for seamless asynchronous loading and leveraged CSS for responsive design, cutting page load times by 20% while ensuring cross-browser compatibility.
- Integrated AWS services (EC2, S3, Lambda, API Gateway) to support high-traffic applications, decreasing infrastructure expenses by 15% while ensuring auto-scaling capabilities.
- Automated testing pipelines using JUnit, Selenium, and Cucumber, increasing test coverage to 95% and decreasing regression bugs by 30%.
- Collaborated to onboarding new teams in human resource functions and to deploy client-facing healthcare applications, ensuring compliance with HIPAA regulations and reducing security risks by 20%.
- Reduced project development cycles by 15% through Agile Environment methodologies, optimizing sprint planning and backlog management while applying effective pacing strategies.

OpenText | Hyderabad, India

Software Development Engineer | Jul'19 – Jun'20

- Developed front-end applications using TDD practices, achieving 95% test coverage and reducing bugs by 30% in production.
- Developed Java applications with a focus on API development and Architecting networking while ensuring compliance with network security standards applicable in Digital Channel scenarios.
- Gained hands-on experience in AWS cloud services deployment, contributing to scalable application development and Data Architecture for data pipeline and ETL processes.
- Engineered and deployed RESTful APIs for multi-platform applications, improving data retrieval efficiency by 25% and ensuring seamless integration with front-end systems.
- Designed a Python-based client-server application, reducing data processing latency by 20% and enhancing system fault tolerance through careful Scripting.

- Developed a task management (To-Do) application using Angular.js and Firebase, increasing productivity by 25% and reducing manual tracking errors by 50% while enhancing Knowledge Sharing practices among users.
- Implemented unit and integration testing with Protractor, Selenium, and Jest, raising test efficiency by 40% while decreasing post-release defects.
- Contributed to global development teams working in a Data Lake architecture, ensuring cross-platform compatibility and reducing API response times by 30%, while surrounding production issues with insightful Data Analytic approaches.

SKILLS:

Languages: JavaScript, TypeScript, Python, Java, SQL, PHP, C, C++, Ruby, Ruby on Rails, Kotlin
Java Technologies: Spring Boot, Hibernate, Spring MVC, Apache Kafka, JDBC
Front-End: HTML5, CSS3, ReactJS, Angular, Bootstrap, jQuery, XML, AJAX, Responsive Web Design, A11y.
Back-End: Node.js, Express.js, RESTful APIs, JSON, Firebase
Databases: MySQL, MongoDB, PostgreSQL, Oracle, RDBMS, NoSQL
Cloud & DevOps: AWS (EC2, S3, RDS), GCP, Azure, Docker, Kubernetes, Jenkins, CI/CD pipelines
Tools: Git, GitHub, Eclipse, IntelliJ IDEA, Selenium, Cucumber, JUnit, TestNG, Mockito, Jasmine, Apache, Android SDK, Flutter, Flask, Django

EDUCATION:

University of North Texas, TX	Master's of Science, Computer and Information Sciences	<i>Dec '23</i>	<i>CGPA: 3.33</i>
Jawaharlal Nehru Technological University, India	Bachelor of Technology, Computer Science and Engineering	<i>Sep '20</i>	<i>GPA: 7.9</i>

PROJECTS / OPEN-SOURCE:

Student Courses Management System | [Link](#) | *Java, Eclipse, Android Studio, Firebase*

- Developed an Android application for student course registration, attendance tracking, and grade management, improving academic efficiency by 30%. Analyzed user feedback to iteratively improve application functionality. Implemented a Firebase-based backend for real-time data synchronization, ensuring seamless faculty-student interaction.

GPS Enabled Online Feedback and Academic Monitoring System | [Link](#) | *Flutter, Dart, Firebase, VS Code*

- Built a Flutter-based mobile application with GPS-enabled feedback for classroom monitoring, improving instructor performance insights by 40%. Designed an admin dashboard for real-time course and faculty management, enhancing decision-making efficiency.

Online Bus Reservation System | [Link](#) | *React, HTML, CSS, JS, Node, Express, Ajax, and MongoDB*

- Engineered a responsive web application for bus ticket booking, reducing manual reservation errors by 50%. Implemented an interactive UI with real-time seat availability and secure payment processing, improving user experience and booking accuracy.

Covisource | [Link](#) | *HTML, CSS, JavaScript, React, NodeJS*

- Developed a COVID resource management platform for hospital and patient tracking, reducing response time for emergency resources by 35%. Integrated an admin dashboard for seamless data management and improved accessibility for users and healthcare providers.

Software Development for Artificial Intelligence Course Project | *Python*

- Created a Python-based autonomous lane detection system employing vision algorithms and balanced regression for real-time road safety monitoring. Improved detection accuracy under varied lighting conditions, reducing errors and enhancing reliability.

CERTIFICATIONS:

- | | |
|---|---|
| • Problem Solving - HackerRank | • Introduction to IOT, Machine Learning, Soft Computing - NPTEL |
| • Java - HackerRank | • AWS Certified Developer – Associate |
| • Fundamentals of Java Programming - Coursera | • Oracle Certified Associate |
| • Frontend for Java Full Stack Development - Coursera | • AWS Cloud Practitioner |
| • Data Structures & Backend with Java - Coursera | |

ADDITIONAL SKILLS:

- Focused on delivering exceptional customer experiences and software quality by ensuring intuitive user interactions, high-performance applications, and applying Object-Oriented Programming principles to improve reliability and maintainability.
- Passionate about creative problem-solving, maintaining disciplined project execution, and ensuring efficient development and operational support throughout the software lifecycle, particularly for financial applications and employee benefits systems.
- Skilled in Human-Computer Interaction and Software Design, integrating usability principles to optimize application effectiveness and user satisfaction.
- Adept at technical documentation, ensuring clear and structured project records to facilitate knowledge transfer and maintain high company standards.
- Experienced in maintaining legacy systems and providing operational support, ensuring long-term stability, continuous performance improvements, and enhanced product usability.
- Proficient in fostering a positive team culture in remote settings, driving collaboration, engagement, and productivity across distributed teams.
- Regularly involved in candidate selection and team leadership, promoting diverse hiring practices and developing leadership skills in future team members through effective interviewing techniques.
- Strong understanding of financial principles related to compensation packages and project budgeting, supporting strategic decisions for resource allocation and team expansion.
- Enjoy tackling challenges head-on and inspiring team success, continuously growing through active participation in team discussions and leadership opportunities.
