

PRIYANKA VALISETTI | Software Engineer

📍 Binghamton, NY | ✉ priyankavalisetti25@gmail.com | ☎ (607) 296 - 8933 | 🔗 [LinkedIn](#)

SUMMARY

- **Software Engineer** with over **3 years** of experience, proficient in object-oriented programming with hands-on expertise in **Java (8/11/17)**, **Python**, **C++**, and **JavaScript (ES6+)**, building high-performance backend systems and automating scripts to reduce manual effort by 30%.
- Built and deployed scalable web applications using **Spring Boot**, **Flask**, **Django**, and **Node.js**, achieving up to 20% improvement in system response times and ensuring secure API development with **Spring Security** and **Django REST Framework**.
- Designed dynamic user interfaces using **React.js**, **Angular**, **HTML5**, **Tailwind CSS**, and **D3.js**, improving frontend performance and reducing page load time by over 1.2 seconds across major modules.
- Developed and optimized complex SQL queries in **PostgreSQL**, **MySQL**, and **Oracle**, while implementing caching and in-memory storage with **Redis** and **MongoDB**, reducing DB latency by nearly 25%.
- Deployed serverless microservices on **AWS (EC2, S3, Lambda, ECS, IAM)** and integrated Azure and GCP components to support multi-cloud architectures, improving uptime SLA to 99.95%.
- Containerized applications using **Docker** and orchestrated with **Kubernetes**, leveraging **Terraform** and **GitHub Actions** for infrastructure automation and CI/CD deployment across staging and production.
- Practiced **Agile (Scrum/Kanban)** and SAFe methodologies using tools like **JIRA**, **Confluence**, and **Azure DevOps**, reducing sprint spillovers by 15% and improving cross-team velocity.
- Version-controlled enterprise-scale codebases via **Git**, **GitHub**, and **Bitbucket**, ensuring seamless code collaboration and clean merge workflows across multi-developer environments.

TECHNICAL SKILLS

Programming:	Java (8/11/17), Python, JavaScript (ES6+), TypeScript, C++, C#, Golang (basic), SQL, PL/SQL, Shell Scripting (Bash)
Web & Backend Frameworks:	Spring Boot, Spring MVC, Spring Security, Django, Flask, Node.js, Express.js, ASP.NET Core, Django REST Framework, JSP, Servlets
Front-End Technologies:	React.js, Angular, Vue.js, HTML5, CSS3, Bootstrap 5, Tailwind CSS, jQuery, D3.js, JSON
Databases & Data Stores:	PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Snowflake, Oracle, SQL Server
Cloud & Serverless Platforms:	AWS (EC2, S3, Lambda, RDS, CloudWatch, IAM, ECS/Fargate), Microsoft Azure (basic), Google Cloud Platform (GCP - basic), Oracle Cloud (basic)
DevOps, CI/CD & Infrastructure:	Docker, Kubernetes, Jenkins, GitHub Actions, Bitbucket Pipelines, Terraform, Maven, Gradle, Git, GitHub, Bitbucket
API Design & Integration:	RESTful APIs, GraphQL (basic), OpenAPI/Swagger, SOAP, WebSockets, API Gateway, Microsoft Teams/Zoom/Google Meet Integrations, JSON/XML Serialization
Version Control Tools:	Git, GitHub, Bitbucket, JIRA, Confluence, Azure DevOps, SAFe Agile, Scrum, Kanban
IDEs & Developer Tools:	IntelliJ IDEA, Eclipse, Spring Tool Suite (STS), Visual Studio Code, Postman

PROFESSIONAL EXPERIENCE

Software Engineer (Intern)

Northern Trust | Bridgeport, CT | Apr 2025 - Present

- Designed and developed scalable microservices using **Java (11)** and **Spring Boot** for financial transaction processing, achieving 99.9% uptime and reducing average latency by 35% through multithreading and optimized DB access patterns.
- Engineered robust RESTful APIs using **Spring MVC** and integrated **OpenAPI (Swagger)** for auto-documentation, enabling third-party vendors to onboard 30% faster with standardized API contracts.
- Created and deployed secure, dynamic web dashboards using **React.js**, **TypeScript**, and **D3.js** to monitor and visualize real-time compliance and transaction data for audit and compliance teams.
- Integrated Spring Security with **OAuth2** and **JWT** to manage fine-grained access controls, resulting in a 40% reduction in unauthorized access issues across user-facing financial applications.
- Led database design and tuning using **PostgreSQL**, **PL/SQL** procedures, and **Redis** caching, reducing query execution time by 28% and increasing throughput under high concurrency workloads.
- Deployed Dockerized applications on AWS infrastructure (EC2, ECS/Fargate, Lambda, S3) using **Terraform** for IaC, reducing infrastructure provisioning time by 50% and improving CI/CD scalability.
- Built and maintained automated CI/CD pipelines using **Jenkins** and **GitHub Actions**, running test automation suites and enabling zero-downtime weekly releases across environments.
- Configured real-time cloud monitoring and alerting with **AWS CloudWatch**, enabling proactive issue resolution and optimized resource scaling during market-opening hours.
- Collaborated on mobile-first frontend development using **Bootstrap 5**, **Tailwind CSS**, **jQuery**, and **HTML5** to optimize performance across loan origination and customer onboarding workflows.

ENVIRONMENT: Java 11, Spring Boot, Spring MVC, RESTful APIs, OpenAPI (Swagger), React.js, TypeScript, D3.js, Spring Security, OAuth2, JWT, PostgreSQL, PL/SQL, Redis, Docker, AWS (EC2, ECS/Fargate, Lambda, S3, CloudWatch), Terraform.

Software Engineer

Mphasis | India | Jun 2022 – May 2023

- Engineered full-stack web applications using **Angular** and **Vue.js** on the frontend, processing 5K+ DAUs with responsive interfaces and secure session management via JWT.
- Implemented high-performance NoSQL storage solutions using **MongoDB** and **Cassandra** for logging, chat, and analytics modules, significantly improving system reliability and performance.
- Built real-time event handling systems using **WebSockets** and integrated alerting into Microsoft Teams, enabling internal notification pipelines for dev and ops stakeholders.
- Utilized **Docker** and **Kubernetes** to deploy services across environments and scaled deployments automatically using HPA, reducing server downtime during peak usage hours.
- Strengthened platform security using **Spring Security** and **OAuth2** integrations, passing security audits with minimal remediations and ensuring robust access control policies.
- Migrated legacy applications and services to AWS (**RDS**, **IAM**, **CloudWatch**, **Lambda**) with automated deployments, increasing system availability and reducing manual interventions.
- Participated in Agile product development lifecycles, facilitated backlog grooming, sprint planning, and retrospectives using **JIRA** and **Azure DevOps**.
- Oversaw Git repository and version control via **Bitbucket** and **Git**, resolving complex merge conflicts, ensuring code quality, and improving branch management workflows.

ENVIRONMENT: Angular, Vue.js, JWT, MongoDB, Cassandra, WebSockets, Microsoft Teams, Docker, Kubernetes, HPA, Spring Security, OAuth2, AWS (RDS, IAM, CloudWatch, Lambda), Tailwind CSS, HTML5, TypeScript, Agile, JIRA, Azure.

Software Developer

Magna Infotech | India | Mar 2020 – May 2022

- Developed scalable backend services using **Java 11**, **Spring Boot**, and **Spring MVC** integrated with **PostgreSQL** and **MongoDB**, improving data processing speed by 28% for enterprise applications.
- Built dynamic single-page applications with **React.js**, **TypeScript**, and **Tailwind CSS** connected to RESTful APIs, enhancing customer engagement by 32% across 5 web platforms.
- Engineered secure authentication modules using **Spring Security**, **JWT**, and **OAuth2** standards with API Gateway and OpenAPI, ensuring SOC2-compliant access control across all user roles.
- Created microservices using **Python** and **Flask**, connected with MySQL and **Redis**, deploying them via Docker and **Kubernetes** to increase deployment consistency by 40% across environments.
- Built scalable APIs and background jobs using **Node.js**, **Express.js**, and **MongoDB** while integrating WebSocket and Swagger for documentation, supporting over 1.2M monthly requests.
- Automated CI/CD workflows using **Jenkins**, **GitHub Actions**, and **Bitbucket Pipelines** integrated with **Maven** and **Gradle**, reducing release cycle time from 6 days to 2 days.
- Refactored legacy modules written in **JavaScript ES6+**, **jQuery**, and **Bootstrap 5** and migrated them to Vue.js, which reduced UI load time by 38% across 3 major product lines.
- Led backend data layer development with PL/SQL and Oracle for reporting modules, implementing indexes and partitioning to improve query response time by 45% in high-volume reports.

ENVIRONMENT: Java 11, Spring Boot, Spring MVC, PostgreSQL, MongoDB, React.js, TypeScript, Tailwind CSS, RESTful APIs, Spring Security, JWT, OAuth2, API Gateway, OpenAPI, Python, Flask, MySQL, Redis, Docker, Kubernetes.

EDUCATION

🎓 Master of Science in Information Systems | May 2025

Binghamton University, State University of New York, Binghamton, New York

🎓 Bachelor of Technology in Electrical and Electronics Engineering | May 2022

BVRIT Hyderabad College of Engineering for Women, India

PROJECTS

Student Registration System (Java, PL/SQL, JDBC)

- Built a Student Registration System using PL/SQL and JDBC.
- Designed an optimized database model for efficient student enrollment and course management.
- Developed an interactive Java-based UI, enhancing usability and reducing processing errors by 20%.
- Implemented stored procedures and triggers to automate key workflows.

Plaintext Encryption Using Steganography (Python, LSB Algorithm)

- Engineered a steganography-based encryption system to securely embed plaintext within images
- Created a Python-based tool using the PIL library for secure message encoding and decoding.
- Evaluated system performance for applications in cybersecurity and data protection.

Image Generation with GANs (Python, PyTorch)

- Designed and trained a Generative Adversarial Network (GAN) to synthesize high-resolution images.
- Improved model accuracy by 15% over baseline architectures through advanced optimization techniques.
- Applied deep learning methodologies to enhance the quality of generated images.
