Experience

Curis Data Science LLC – Remote

May 2025 – Present

Software Engineering Intern

- Spearheading development of a full-stack AI-powered pipeline that transforms PowerPoint-based medical presentations into structured research paper drafts, integrating slide parsing (python-pptx), NER (Named Entity Recognition), REST APIs, and LLMs like Mistral-7B and OpenAI GPT models.
- Engineered a modular microservices-based backend using Python, Flask, and Docker to support real-time file ingestion, biomedical entity extraction, and .docx generation; optimized LLM inference for reduced latency and integrated version control with Git.
- Contributed to product roadmap using Agile methodology to introduce drag-and-drop UI (React), asynchronous task queuing, and versioned document storage — aiming to reduce processing time by 60% and improve manuscript accuracy with fine-tuned generation prompts.

Technical Projects

Cruza

Feb 2025 – Present

Co-Developer

- Co-lead a team of 3 developers to build a campus-focused rideshare web application for Rutgers students as an alternative to overcrowded bus systems.
- Develop modular, reusable React components using hooks and the Context API for efficient state management.
- Implement Next.js for dynamic routing and server-side rendering to build a responsive, high-performance UI.
- Architect a distributed matching backend system using Flask, MongoDB, and Docker.

Indeed Scraper | [GitHub Repository](#)

May 2025

Co-Developer

- Designed an automated ETL pipeline using Python and Selenium to scrape, normalize, and analyze 1,000+ live Software Engineer postings across 50 states, integrating job metadata into structured datasets.
- Applied NLP and unsupervised ML techniques (TF-IDF, K-Means, PCA, silhouette analysis) using Scikit-learn to cluster roles by skill set, industry trends, and remote-friendly classification.
- Visualized geospatial hiring patterns and skill adoption trends with interactive Matplotlib/Seaborn dashboards; planned extensions to cloud-hosted deployment and scheduled crawls for ongoing market monitoring.

Skills

Languages: Java, Python, C, JavaScript, HTML/CSS, SQL

Frameworks & Tools: React, Next.js, Node.js, Pandas, NumPy, Matplotlib

Databases: MySQL, MongoDB

Education

Rutgers University

May 2025

B.S. Computer Science

- **GPA:** 3.736 / 4.0
- **Relevant Courses:** Data Structures, Computer Architecture, Discrete Structures I & II, Software Methodology, Design & Analysis of Computer Algorithms, Data Science, Internet Technology
