SUMMARY

Full Stack Developer with over 4 years of experience delivering scalable web applications and enterprise solutions. Specialized in building secure back-end services using Python frameworks and creating modern, responsive user interfaces with React.js and Next.js. Proven track record in designing RESTful APIs, optimizing application performance, and implementing best practices in code quality and testing. Adept at collaborating in Agile teams, translating business requirements into technical solutions, and ensuring high availability and maintainability in production environments.

EDUCATION

Master's in Computer Science and Information Systems

May 2025

Concordia University Wisconsin, USA

SKILLS & CERTIFICATIONS

Programming Languages & Databases: Python, Java, Go, PostgreSQL, MongoDB, MySQL, Redis, Cassandra, DynamoDB

Frameworks & Libraries: Django, Flask, FastAPI, Pyramid, Spring Boot, Spring MVC, Node.js, React.js, Next.js, Bootstrap, JavaScript, TypeScript, JSON, XML

Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, EKS, CloudFormation), Azure (Azure DevOps), Jenkins, Docker, Kubernetes, GitHub Actions, GitLab CI, Podman, Helm, Terraform, NGINX

Event Streaming & Messaging: Apache Kafka, RabbitMQ, Amazon SQS, Redis Streams, Google Pub/Sub, GraphQL

Testing, CI/CD & Monitoring: PyTest, Unittest, Mockito, Postman, SoapUI, OpenAPI, Babel, npm, yarn, pip, Prometheus, Grafana, Datadog, AWS CloudWatch, ELK Stack, Splunk

Collaboration & Methodologies: Agile/Scrum, TDD, Git, GitHub, Bitbucket, Jira, Confluence, Figma, Slack, ClickUp

Certification: Microsoft Certified Azure Fundamentals (AZ-900) | Socotra - Developer and Business Analyst

EXPERIENCE

JPMorgan Chase & Co., USA

September 2024 – Present

Full Stack Developer

- Engineered and deployed a secure customer onboarding application using Python (Django, FastAPI) and Next.js, enabling a 30% reduction in onboarding time by integrating automated ID verification and document processing services hosted on AWS EC2 and orchestrated through EKS.
- Redesigned a high-traffic transaction processing service from a monolithic architecture to microservices using Pyramid, Kafka, and Redis Streams, achieving a 40% increase in throughput while reducing processing latency from 2.5s to under 1.2s.
- Implemented CI/CD pipelines with Jenkins, GitHub Actions, and Podman containers, cutting deployment lead time by 50% and ensuring zero downtime releases for customer-facing applications.
- Optimized fraud detection APIs by refactoring Python services and integrating streaming analytics, resulting in a 25% improvement in anomaly detection accuracy and reducing false positives in real-time transaction monitoring.
- Automated infrastructure provisioning with AWS CloudFormation and Helm, decreasing manual configuration errors by 90% and enabling consistent deployments across staging, UAT, and production environments.
- Enhanced observability and incident resolution by integrating application logs and metrics into the ELK Stack, reducing mean time to recovery (MTTR) from 3 hours to under 45 minutes.

Zensar Technologies, India

July 2020 – July 2023

Full Stack Developer

- Developed a customer account insights portal using React.js and Flask microservices, enabling business users to track account performance in real time and improving decision-making speed by 35%.
- Maintained Python modules and TypeScript components via internal package repositories (pip, npm) to standardize backend utilities and frontend UI elements, ensuring consistency across client projects and reducing development effort by 25%.
- Engineered backend microservices in Python using FastAPI, leveraging Pydantic for data validation and SQLAlchemy for ORM operations, enabling asynchronous processing for client reporting workflows and reducing report generation time by 40%.
- Architected and deployed a high-availability notification service using RabbitMQ and Cassandra, capable of handling over 2M messages/day with 99.99% uptime for enterprise clients.
- Built and integrated secure GraphQL APIs for multi-platform data access, reducing API response time by 45% and simplifying data retrieval across multiple microservices.
- Implemented containerized deployments with Docker and automated pipelines with GitLab CI, reducing release cycle time from 2 weeks to 3 days while ensuring high test coverage through TDD and Unittest.
- Improved application observability by configuring Datadog and Splunk dashboards for error tracking, reducing mean time to detect issues (MTTD) by 60%.
- Collaborated with cross-functional teams using Azure DevOps, Bitbucket, and Confluence to plan, design, and deliver features aligned with client goals, ensuring on-time delivery for 100% of sprint commitments.
