

SUMMARY

Proven expertise in data warehousing, analytics, and optimization across diverse industries, including healthcare. Skilled in leveraging tools like Python, SQL, Power BI, and ETL tools to deliver streamlined workflows and derive actionable insights that enhance organizational decision-making. My ability to understand stakeholders' needs and translate them into scalable, impactful solutions has been instrumental in achieving business goals and enhancing operational performance

- Adept at developing comprehensive data solutions aligned with strategic objectives, fostering collaboration across teams, and ensuring seamless implementation.
- With a focus on stakeholder management, compliance with **HIPAA regulations**, and innovation, I have led initiatives that optimize operations and support data-driven decision-making in dynamic environments, including healthcare.
- Led the development of data warehousing solutions and intuitive dashboards, enabling data-driven decision-making
- Collaborated with stakeholders to translate business needs into scalable, impactful solutions by using various requirements elicitation techniques
- Optimized workflows and processes through cross-functional collaboration and active team engagement
- Conducted data profiling and cleansing using **SQL** and **Advanced Excel**, improving the quality and reliability of organizational datasets
- Developed automation workflows in **Power Automate** to integrate **CRM systems** with data warehouses, enabling real-time tracking and streamlined operations
- Automated repetitive data processing tasks using **Python** and **Excel macros**, improving operational efficiency and accuracy in reporting workflows

TECHNICAL EXPERTISE

Programming Languages: Python, R, SQL

Data Visualization: Power BI, Tableau, Matplotlib

ETL & Data Processing: Advanced Excel (including VBA and Macros), Streamlit, Power Automate, Azure Data Factory

Data Management and Warehousing: Microsoft Azure (SQL database, Data factory), AWS (Relational Database Service), SAP, DBeaver, MS-SQL, MySQL, SQLite

Data Transformation: Data cleansing, scrubbing, profiling

Data Pipelines: ETL, Data validation, Automation tools

Project Management: Agile Methodology, Scrum, Teamcenter, Confluence, JIRA

Business Workflows: Client Implementations, Vendor Integrations, KPI Analysis, Automation, Continuous Process Improvement (CPI), Inventory Analysis

Data Analysis Tools: Advanced Excel (Power Query), SQL-based data modeling

Domain-Specific Tools: EMR Systems, Eligibility/Enrollment workflows, Claims Adjudication

DOMAIN EXPERTISE

Proficient in healthcare analytics, supply chain optimization, and financial analysis, with expertise in EMR data, claims processing, inventory management, and KPI tracking. Skilled in data governance, warehousing, and business intelligence, leveraging tools like SQL, Power BI, and Tableau to deliver scalable solutions. Experienced in Agile methodologies, stakeholder management, and compliance with regulatory standards such as HIPAA

PROFESSIONAL EXPERIENCE

Business System Analyst Intern - Advanced TelePsych PLLC, Connecticut
EMR data Analysis | SQL | Python | Advanced Excel | KPI Analysis

Aug 2024 – Dec 2024

Led a healthcare-focused data accessibility and operational efficiency project, addressing challenges in data integration, reporting accuracy, and stakeholder decision-making. Collaborated with cross-functional teams to implement advanced analytics and automation tools, resulting in improved reporting processes, optimized resource allocation, and enhanced tracking of key performance metrics

- Collaborated with stakeholders, including clinicians and management, to gather and document requirements for streamlining data access and reporting processes from **EMR** and patient management systems
- Conducted workshops to define project objectives, focusing on resolving data accuracy issues and enabling real-time tracking for informed decision-making
- Leveraged **SQL** and **Python** to extract, transform, and analyze **EMR** data, identifying key trends and resolving discrepancies
- Utilized **Advanced Excel** to organize and structure large datasets, ensuring accuracy and consistency in reporting, including generating detailed **denial reports** and tracking **cash collections**
- Designed dashboards using **KPI analysis** to monitor critical metrics, such as patient satisfaction, treatment efficacy, and recruitment performance, incorporating insights related to **CPT codes**
- Automated manual reporting workflows with **Excel macros**, improving process efficiency and ensuring compliance with internal audit standards
- Deployed dashboards and reporting frameworks to provide real-time, actionable insights for stakeholders
- Presented regular updates to leadership, using visualizations to align strategies and demonstrate project progress
- Documented workflows, challenges, and solutions to ensure transparency and facilitate future scalability of processes

Healthcare Payer Analysis Project:

Worked on a small-scale Healthcare Payer Analysis project aimed at resolving critical challenges in claims processing, payment reconciliation, AR balance tracking, and revenue leakage across multiple payer systems. Leveraged EMR systems, advanced data integration, analytical and automation tools to deliver tailored solutions, resulting in streamlined workflows, increased claims approval rates, and reduced denial rates

- Worked with executives, insurance representatives, and billing teams to gather and analyze requirements for addressing challenges in claims processing, payment reconciliation, and AR balance tracking, with a focus on EMR data integration
- Conducted detailed analysis of payer-specific trends using historical claims data to identify common discrepancies, inefficiencies, and patterns in **denial reports**
- Partnered with a data architect to develop a robust payer-focused data warehouse, integrating EMR and clearinghouse data for improved accuracy and accessibility
- Designed Power BI dashboards to visualize **real-time claims status**, denial patterns, and revenue cycle metrics, providing actionable insights for stakeholders and improving visibility into **CPT code-specific performance**
- Automated claims follow-up processes using **Excel VBA**, significantly reducing manual intervention and improving tracking of **cash collections**
- Applied predictive modeling techniques to forecast claims approval probabilities and identify bottlenecks in payment timelines, ensuring timely resolution of denial cases.
- Collaborated with stakeholders to test and validate solutions, refining workflows based on iterative feedback and ensuring alignment with business needs
- Documented project workflows, technical requirements, and solution architecture to ensure alignment and facilitate future scalability

Software Engineer/Business Analyst Intern - Flexdays AI Solution, California
Python | SQL | Power BI | Data Processing Analysis | Research Analysis

Jan 2024 - May 2024

Focused on optimizing data collection, processing, and integration workflows to support patient management, claims processing, and operational logistics. Leveraged tools such as Python, SQL, Power BI, and advanced data analysis techniques to design scalable solutions, enabling real-time data tracking and improving workflow efficiency in healthcare operations

- Conducted requirement elicitation sessions with healthcare providers, insurance representatives, and administrative teams to identify inefficiencies in patient and claims management workflows
- Facilitated brainstorming sessions to assess current workflows and processes, identifying pain points in data collection for patient records, claims data, and reporting
- Designed and documented a scalable data pipeline for exploratory data analysis (EDA) using **Python**, **Streamlit**, and **OpenAI**, tailored for healthcare data such as EMR and claims
- Developed an OCR API to extract, validate, and transform healthcare data from images of patient records, claims documents, and other forms, ensuring compliance with regulatory standards
- Engineered automated workflows using **Power Automate** and **SQL** to integrate healthcare CRM systems with the data warehouse, enabling real-time data tracking and claims reconciliation.
- Designed scalable datasets for a centralized data warehouse, supporting seamless retrieval and analysis of healthcare data, including patient records, claims status, and denial reports
- Created detailed documentation and updated standard operating procedures (SOPs) in **Confluence** to standardize data warehousing practices and enhance onboarding process
- Automated data transformation workflows using **Python** and integrated them with **Power BI**, providing enhanced visualization of healthcare KPIs
- Conducted cross-functional training sessions to improve the adoption of advanced data collection and automation solutions within healthcare teams
- Built real-time dashboards in **Power BI** to monitor healthcare KPIs, including patient satisfaction, claims processing efficiency, and denial rates, ensuring actionable insights for stakeholders
- Utilized **Python** and **SQL** to maintain and monitor implemented systems, ensuring functionality, accuracy, and alignment with healthcare regulatory requirements
- Documented workflows, technical requirements, and project milestones to support scalability and ensure efficient onboarding for new healthcare teams

Analyst, Management Consulting - Epiroc Mining Ltd, Bengaluru, India
R | SQL | Microsoft Azure | Tableau | JIRA | Inventory Analysis

Jan 2018 - July 2022

Facilitated the development and implementation of data warehousing and analytics solutions in an Agile environment by bridging the gap between business clients and development teams. My role involved gathering and documenting stakeholder needs through elicitation techniques, creating and managing user stories in JIRA, and translating business requirements into clear technical specifications. By ensuring alignment between business objectives and technical execution, I coordinated iterative solution delivery, streamlined data processes, improved reporting accuracy, and enabled data-driven decision-making, contributing to organizational efficiency and strategic alignment

- Facilitated stakeholder management by coordinating with business clients, including operations leaders and senior management, to elicit and document requirements for data warehousing and analytics projects
- Conducted elicitation sessions through interviews, workshops, and brainstorming to gather insights into business challenges, objectives, and data governance requirements
- Collaborated with stakeholders to define product vision, prioritize features, and align solutions with business strategies, ensuring compliance with data governance policies
- Actively contributed as part of an **Agile team**, participating in sprint planning, stand-ups, and retrospectives to ensure smooth and iterative delivery of solutions
- Used **JIRA** to create, track, and manage **user stories**, epics, and tasks, ensuring clear articulation of requirements and seamless coordination among developers
- Articulated detailed technical specifications and requirements for the development team, ensuring alignment with business needs and technical feasibility
- Worked closely with the design team to translate business requirements into technical specifications for data pipelines in **Microsoft Azure**, leveraging **R** and **SQL** for automation and integration
- Defined requirements and documented workflows for **ETL processes**, ensuring consistency and accuracy of data transformation
- Collaborated with business stakeholders to develop a roadmap for inventory data centralization in a data warehouse, enhancing reporting and decision-making capabilities
- Coordinated with the design and development teams to oversee the creation and testing of ETL pipelines, validating results to ensure seamless data integration
- Partnered with business clients to design and launch **Tableau** dashboards, providing visualizations for inventory analysis, real-time KPI tracking, and governance-compliant reporting
- Liaised between stakeholders and technical teams to implement optimized **SQL queries**, reducing inefficiencies in supply chain workflows while ensuring data integrity and security
- Guided the establishment of **data quality controls** using scripting, macros, and governance policies to maintain data reliability and compliance
- Acted as the central point of contact between business clients and the technical team, ensuring alignment on project objectives, deliverables, and governance protocols
- Used **JIRA** to manage tasks, track progress, and prioritize deliverables, ensuring timely completion of project milestones and adherence to data governance standards
- Documented **user stories** in JIRA to capture detailed functional and non-functional requirements, streamlining communication and development processes
- Worked with business clients to define and implement **CPI systems**, ensuring operational improvements aligned with strategic goals and governance requirements
- Documented elicitation outcomes, workflows, and project milestones in JIRA, incorporating data governance practices to ensure transparency, traceability, and compliance
- Provided ongoing support and coordinated with both clients and the design team to maintain and enhance implemented solutions, ensuring compliance with evolving governance standards and business needs

Business Analyst Trainee - Epiroc Mining Ltd, Bengaluru, India
SQL | Power BI | Advanced Excel | ETL

Oct 2017 - Jan 2018

Started my career at Epiroc Mining Ltd as a Business Analyst Trainee, where I underwent extensive training in data warehousing, analytics, and business intelligence tools, including SQL, Power BI, Advanced Excel, and ETL processes. Worked on small-scale projects to support operational efficiency and reporting needs, gaining hands-on experience in a mining and engineering domain

- Attended comprehensive training sessions to develop proficiency in SQL, Power BI, Advanced Excel, and ETL tools
- Learned the fundamentals of mining operations and data requirements, focusing on the integration of business intelligence solutions
- Assisted in creating small-scale Power BI dashboards to visualize operational metrics and mining rig performance

- Supported the development of ETL pipelines for processing and transforming data from multiple sources into actionable insights
- Collaborated with senior analysts and technical teams to document data requirements and workflows for ongoing projects
- Conducted data cleaning and validation tasks using Advanced Excel to ensure accuracy and consistency of reports
- Worked on minor enhancements of existing data solutions, contributing to improvements in data accessibility and usability
- Participated in stakeholder meetings to understand business objectives and align small project deliverables with company goals
- Shadowed experienced team members to learn the best practices in managing data warehousing and analytics solutions
- Prepared detailed documentation of training learnings and small project workflows to support future onboarding and scaling efforts

ACADEMIC PROJECTS

Forecasting Revenue Growth Model for Adidas

Jan 2024 - May 2024

- Developed an analytical model using R to optimize pricing, product positioning, and marketing strategies, which helps in driving the revenue growth
- Used historical data of Adidas and compared with their competitors using various Machine Learning Models, through skills in data analysis
- Conceptualized sales data to identify trends, regional performance, shift to online channels and proposed actionable strategies like seasonal marketing and channel optimization to boost revenue
- Developed a Statistical forecasting model to drive revenue growth in 6 months and visualized using Power BI to generate revenue forecasts. Used excel to build data models for this project

Financial and Growth analysis of Apple Inc

Aug 2022 - Dec 2022

- Prepared Visualizations in Tableau to show various Key Performance Indicators (KPI) like Gross Profit Margin and Net Profit Margin, Total Assets, and Total Liabilities, Debt to Equity ratio, revenue and Revenue star rating, and Inventory ratio for over 10 years
- Used DAX for calculating Working Capital, Earning Per Share, Liquidity, and Shares Outstanding by Fiscal year, enhancing skills in data transformation
- Built an interactive Power BI dashboard with various charts by tracking KPI metrics year over year (YoY), month over month (MoM) and Period over Period (Pop), with good knowledge of relational database systems

Development of Reinforcement Polymer-based composite using Recycled Paper Waste

Dec 2016 - Apr 2017

- Created eco-friendly polymer composites by recycling wastepaper and plastic, addressing waste management issues
- Optimized composite properties through blending and injection molding, achieved an improvement in strength and durability, validated using SEM, DMA, and TGA
- Accomplished successful conversion of recycled paper waste into polymers, reducing material costs in small-scale Industries and automobile manufacturing industry

EDUCATION

Master of Science in Business Analytics | University of New Haven, Connecticut, USA

May 2024

Bachelor of Engineering in Mechanical Engineering | Dayananda Sagar College of Engineering, Bengaluru, India

July 2017

CERTIFICATIONS

- Certified Scrum Product Owner (Scrum Alliance)
- Certified Scrum Master (International Scrum Institute)
- Machine Learning(deeplearning.ai) - Coursera
- Deep Learning Specialization(deeplearning.ai) - Coursera
- Digital Product Management: Modern fundamentals (Darden School of Business)
