Operating Systems: Windows 98/NT/2000/XP/2003, UNIX, SUN/Solaris, MSDOS.

Databases: MS Access 7.0/2000, SQL, MS SQL Server 2000.

Other Exposure: Requisite Pro, VB, VBA for Excel, Crystal Reports, CVS, PVCS Dimensions, VSS, Developer 2000 (Forms, Reports Graphics), COM, Active X, RoboHelp.

MS Office: MS Word, MS Excel, MS Visio, MS Power Point.

Networking: TCP/IP, Client Server Paradigm.

PROFESSIONAL EXPERIENCE

Nov '09 - Present Working on Intern Project at Kaizen Technologies 1 Lincoln Highway, Suite 10 (Close to Metropark Station) Edison NJ 08820

Client: PRUDENTIAL INSURANCE/FINANCIALS, ISELIN, NJ (May '08 – Nov '09)

Reduction of Referrals was implemented to simplify the process by which the clients of prudential can request certain transactions both in a phone call to their call center and on the Internet.

- Reviewed the standards for Test Documentation and Test Progress reporting.
- Review and analyze project documentation like requirement specification, functional specifications, and design document using the company standards and procedures in Agile models.
- Studied the application flow, Prepared the Checklist and Test Plan for the test data to be used for exercising the different functionalities.
- Interacted with developers to understand the application functionality and navigational flow, Prepared the data for

both positive and negative testing to assess the business flow in the application.

- Collaborate with business users and SQA teams to assist with development of content, applications, testing scripts,
- Cross Browser Testing and Protocols.
- Worked on Backend Testing, using SQL Queries.
- Tested the functionality of the application using QTP. Modified and enhanced the test scripts in QTP and carried out functional tests and regression tests on all the new builds.
- Reported the bugs, Email notifications to the QA Leads, developers using Quality Center.
- Participated as member of the product team responsible for determining the direction of future products.

Environment: Quality Center, Quick Test Pro 8.2, Web Browsers, Load Runner, VB, Crystal Reports, SQL Server, HTML, XHTML, Java, Windows 2000.

Client: State Street – Boston, MA (Nov ‘07 – April ‘08)

State Street is one of the leading diversified financial services providers which offer investment management and investment servicing. The scope of this project was to develop an application using HTML and Java which enables potential customers to perform searches for Stock Rates, Bond, Derivatives, Equity's and current market performance. The site gives complete news and stories about recent events related to Investments (such as Stock, Bond and Market).

- System Testing responsibilities include inserting data through the front-end application to enter orders and to verify the invoices generated based on the order. Make sure that the data on both ends matches.
- Also to retrieve reports from the Revenue Recognition System. Validating the data in the reports to match that in the database using the SQL Queries. Interface (FTP) testing was performed by connecting and disconnecting by bring the server down.
- Defect tracking was done using Quality Center. Regression testing was performed after bugs were fixed and a new build was made.
- Documented a comprehensive report of performance testing using Load Runner. Within the report recommendations were made on where and how improvements could be made to the application and infrastructure using cross-browser testing using different browsers.
- Worked on Agile models and Prepared the Test Plan.
- Worked closely with software developers to track and trouble shoot defects.

Environment: Quality Center, Load Runner, IE 7.0, Netscape Navigator, VB, Java, SQL Server, UNIX, Sun Solaris, Apache Server, and Windows NT.
