PROFILE SUMMARY

Software Engineer with 3+ years of experience in backend and full-stack development. Skilled in building REST APIs and deploying secure, scalable applications on Azure. Delivered production systems including a biometric verification platform (95% accuracy) and a multilingual chatbot (100K+ MAUs, ~\$1M impact)

PROFESSIONAL EXPERIENCE

NVIT | Software Engineer Intern – Full Stack | *Frisco, TX* Jan 2025 – May 2025

- Architected [ILMS v1](#), a **cloud-native government system** adopted across 5+ departments, enabling biometric verification and payroll automation
- Reduced attendance errors by **95%** integrating Azure Face API and GPS geofencing via a FastAPI microservice for **biometric verification**, eliminating proxy check-ins
- Built 15+ responsive dashboards with **React** and role-based access for employees and multi-level admins, enabling analytics on attendance, payroll and departmental productivity
- Developed modular REST APIs (**Node.js/Express + Postgres**), implementing **OAuth2/JWT** authentication and RBAC to protect sensitive routes and automate core workflows
- Reduced **deployment effort 40%** by containerizing services with **Docker** and automating QA pipelines on Azure via Bitbucket

Cognizant | Backend Engineer | *India* Oct 2021 – Feb 2023

- Built RESTful back-end services in **Node.js/Express.js** for a multilingual chatbot on Azure scaling to 12+ countries (100K MAUs), contributing to a **\$1M+** team-led increase in qualified leads
- Improved API **response time by 30%** by optimizing payload processing and modularizing service design on high-traffic endpoints
- Applied **TDD** practices and conducted unit, regression, and integration testing using **Postman**, reducing QA bugs by **60%** and strengthening release reliability
- Managed Git workflows, PR reviews for **version control** reducing merge conflicts by 12% by implementing branch management strategies and enforcing best practices for code reviews
- Added NLP enhancements using **Azure Language Studio** for intent detection and entity recognition, improving chatbot accuracy
- Enhanced **observability** and issue diagnosis by 30% with structured logging using **Morgan** and **Azure Monitor** and collaborating with DevOps team to manage bi-weekly production rollouts using **Azure DevOps**
- Collaborated in **SAFe Agile** teams, presented in sprint demos and earned **5-star performance rating** for ownership and reliability

Cognizant | Frontend Engineer | *India* Jan 2020 – Sep 2021

- Improved **site UX** and **performance** for a U.S. e-commerce client by delivering responsive UIs using React, HTML5, and CSS3
- Resolved over **30** UI/UX issues by troubleshooting web services, ensuring WCAG-compliant accessibility and quality assurance
- Led **10+** technical sessions on front-end technologies and practices, building prototypes via pair programming to improve adoption
- Completed Cognizant’s 6-month corporate training in **MERN, Core Java, and Python**; applied skills in internal projects

TECHNICAL SKILLS

Frameworks	React.js, Angular, Node.js, Next.js, FastAPI
Languages	JavaScript, Python, TypeScript, Java, C++, SQL
Databases	PostgreSQL, MongoDB (NoSQL), MySQL Server
Software Engineering	REST APIs, SDLC, Microservices, Agile, TDD, MVC, Design Patterns
AI	Machine Learning, LLMs, NLP, Data Science
Cloud & DevOps	Azure, CI/CD, GitHub, Language Studio, Docker, Containerization
Tools	Jira, Visual Studio, Production Support, Linux, Postman
Certifications	Cloud Engineering with Google Cloud Platform (GCP), Oracle Cloud Infrastructure Foundations

EDUCATION

Master of Science in Computer Science, University of Texas at Arlington | *TX* May 2025
Courses: Data Structures & Algorithm Design, Distributed Systems, Data Mining GPA: 3.91

Bachelors of Science in Electrical Engineering, SASTRA University | *India* May 2020

PROJECTS

Financio - Solution Architect | *React, Node, Chart.js, MongoDB, Postman, Jira* [GitHub Link](#)

- Architected an expense tracker with JWT auth, state management and data visualization using Chart.js. Led a team of 4 in Agile sprints, managing deliverables via Jira, optimizing APIs using Node.js and reduced bugs by 60% via automated tests

Aura Cast - Full-Stack Developer | *Next.js, Gemini AI, TypeScript, Cloudinary, Tailwind, Clerk* [GitHub Link](#)

- Built an AI-driven SaaS with **5+** media transformation tools: video compression, image formatting, and LLM-based captioning and smart filtering using Gemini. Designed a polished user interface with Tailwind and reduced manual media work by **70%**
