## Professional Summary

---

Detail-oriented Data Analyst with a Master's in Information Systems and hands-on experience in Python, SQL, Tableau, and Excel. Skilled in collecting, cleaning, and analyzing large datasets to uncover trends and support business decision-making. Proven ability to create interactive dashboards and reports that improve data-driven strategies and operational efficiency.

## Skills

---

- **Databases:** Snowflake, AWS RDS, Teradata, Oracle, MySQL, Microsoft SQL, Postgre SQL
- **Data Cleaning Preparation:** Data wrangling, handling missing values, outlier detection, normalization, and transformation
- **Programming Languages:** Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Excel (Advanced functions, PivotTables, Power Query)
- **Visualization:** Tableau, Power BI, Excel Dashboards
- **Data Formats:** CSV, JSON, Excel
- **Cloud Tools:** AWS (S3, RDS, QuickSight), Azure Data Studio
- **Statistical Analysis:** Correlation, regression, forecasting, hypothesis testing, A/B testing for business insights
- **Collaboration:** Agile and scrum fundamentals, stakeholder engagement, requirements gathering, and documentation

## Experience

---

### Data Analyst - Teladoc Health, - Dallas, Texas

Jun 2024 – Present

- Collected, processed, and analyzed large healthcare datasets including claims, provider records, and eligibility data, performing data cleaning, validation, and aggregation to detect trends, patterns, and anomalies affecting patient outcomes and costs
- Cleaned, structured, and analyzed health insurance claims data to identify fraud patterns and patient engagement metrics.
- Collaborated with clinical teams and senior leadership, translating complex data findings into strategic insights for cost reduction, improved care delivery, and enhanced patient management programs.
- Designed and refined ETL pipelines in SQL and Python, automating the extraction, transformation, and loading of claims and eligibility data to ensure accurate, timely, and standardized reporting.
- Implemented data governance and compliance controls, ensuring all processes adhered to HIPAA, Medicare, and Medicaid regulations, including data access, security, and audit documentation.
- Worked with offshore team and mentored junior analysts, providing guidance on data processing, analysis methodologies, and report creation to maintain high-quality, timely deliverables.
- Delivered actionable insights that reduced hospital readmission rates by 8%, optimized care management programs, and informed evidence-based decision-making for patient care.
- Built advanced dashboards in Power BI, visualizing patient outcomes, provider performance metrics, cost trends, and key KPIs to support clinical and operational decision-making.
- Partnered with clinical operations, data engineering, and analytics teams to translate medical and business needs into actionable data insights.
- Presented complex healthcare trends and insights to both technical and non-technical stakeholders, including medical directors and compliance officers.

## **Business Data Analyst - Citi, – Atlanta, GA**

**Sep 2022 – Jun 2024**

- Analyzed large datasets from multiple golden sources, such as deposits, loans, and transactions, applying joins, aggregations, and validations to identify critical resolution services required for regulatory reporting.
- Developed and maintained data models and MS Access databases, ensuring referential integrity, optimized queries, and accurate reporting structures to support audits and compliance checks.
- Built interactive dashboards in Power BI and Tableau to visualize transaction trends, detect fraud risk patterns, and monitor customer churn, enabling timely decision-making by stakeholders.
- Partnered with Risk, Compliance, and IT teams to define business data requirements, translate them into technical specifications, and streamline operational processes across departments.
- Implemented controls, validations, and reconciliation checks on quarterly resolution planning data submissions, ensuring completeness, accuracy, and consistency with regulatory guidelines.
- Conducted A/B testing on new banking features, analyzing user behavior, transaction performance, and engagement data to provide leadership with actionable, data-backed recommendations.
- Created anomaly detection models in SQL to flag suspicious transactions and fraudulent behavior, supporting the fraud prevention team.
- Worked with engineers and data scientists to define data requirements, design schema, and ensure consistent data delivery to BI tools.
- Partnered with finance, underwriting, and customer success teams to align data tracking with business goals and regulatory requirements
- Provided insights that reduced transaction-related risks by 15%, strengthening compliance readiness and improving overall operational resilience.

## **Data Analyst - 3Insys, – Hyderabad, India**

**Apr 2021 – Mar 2022**

- Gathered raw financial datasets from diverse sources including Excel sheets, SQL queries, APIs, and internal reports, applied data wrangling techniques (missing value handling, deduplication, and normalization) to ensure accuracy and consistency, enabling trustworthy financial reporting
- Comprehensive EDA using Python (Pandas, Matplotlib) and Power BI, identifying irregular expense patterns, seasonality trends, and hidden budget leakages, which helped business leaders flag cost overruns before they escalated.
- Built interactive Power BI dashboards with DAX measures and automated refresh pipelines; visualized critical KPIs including revenue growth, departmental spend breakdown, ROI, and cost-to-income ratio, providing executives with real-time decision-making tool
- Collaborated closely with finance stakeholders to understand reporting needs, converted them into technical specifications, and delivered tailored insights through dynamic dashboards and reports, bridging the gap between finance and analytics teams.
- Established data governance practices including validation checks, reconciliation rules, and audit logs, documented reporting processes to standardize workflows, reduce manual errors, and ensure compliance with internal and external financial standards.
- Performed on-demand financial deep-dives into vendor contracts, employee expenses, and capital allocation using SQL, providing actionable insights that influenced vendor negotiations and workforce optimization strategies.
- Translated complex financial data into clear executive-level presentations, communicated key findings and recommendations that led to process improvements and cost optimization strategies, achieving a 12% reduction in operational expenses.

## **Education**

**Trine university**, MS in Information Science

**Aug 2022 – May 2024**

- GPA: 3.7/4.0

**JNTU-H**, Bachelor's in Information Technology

**Jun 2017 – May 2021**

- CGPA: 7.2/10
