Summary

Graduate Computer Science student with experience in data engineering, platform integration, and cross-functional product delivery. Skilled in Python, SQL, Jira, Agile, REST APIs and cloud / data tools with a record of process automation and efficiency gains (25–90%). Proven ability to deliver data analysis, system modernization, and scalable software solutions supporting feature strategy and platform initiatives.

Education

Florida International University (FIU)
Master of Computer Science, GPA: 4.0/4.0

Miami, FL
Jan 2024 – Dec 2025

Professional Experience

Florida International University
Data Engineer - Research Assistant

Jan 2025 – Present
Miami, FL

- Enhanced data integrity by cleaning and organizing large datasets (100,000+ records) leveraging Python and SQL, cutting down data errors by 25% and improving overall analysis efficiency for financial research projects
- Developed and motorized data collection pipelines utilizing SAS and WRDS, leading to a 30% decrease in manual data entry time and ensuring timely, accurate reporting for faculty research initiative

INIT BUILD FIU – Code Zone
Web Developer

Sep 2024 – Dec 2024
Miami, FL

- Integrated user authentication API and spearheaded a tracking app leveraging spatial recall to promote problem-solving retention, driving a 30% improvement in user performance

Cognizant
Senior Product Specialist

Dec 2020 – Nov 2023
Chennai, India

- Optimized Ingenium cloud integration with module refactoring and rigorous testing, promoting productivity by 80%
- Directed a cross-functional team of 4 in developing insurance products by establishing efficient CICS transaction flows and COBOL modules, leading to on-time product launches and increasing client satisfaction by 15%
- Drove defect resolution with clients using agile methods, achieving a 25% bug reduction and refining system stability
- Automated record insertion processes using Java and shell scripts, cutting manual intervention by 90%, upgrading database scalability, and earning an award for automation excellence

Mphasis
Product Specialist

Jun 2019 – Dec 2020
Chennai, India

- Engineered 20+ business needs into JIRA specs, driving 35% productivity gains and delivering on-time releases
- Orchestrated UAT testing and defect resolution, ensuring 90% on-time delivery and high quality
- Developed an automated web page creation process using Java and HTML, implementing predefined styles and dynamic content, reducing manual setup time by 50%, and earning a performance excellence award.
- Orchestrated automated web page creation (HTML) in Java, slashing setup time by 50% and achieving recognition

Skills

Programming: Node.js, Java, JavaScript, React, Rest API, Ingenium, HTML, CSS, COBOL, JCL, Rexx

Database: DB2, MySQL, PostgreSQL

Tools: JIRA, Git, Bitbucket, Terraform, DevOps, Agile, Scrum, Docker

Certifications: Software Architecture in Domain-Driven Design, LOMA 281 Certified

Projects

Eventi-Scout Web-App | *React, Ticketmaster API, EmailJS*

Aug 2024 – Sep 2024

- Architected a high-performance event discovery app with React and Ticketmaster API, strengthening search effectiveness by 35% and engagement through 20% more bookmarked events
- Devised an efficient memory bookmarking system, enhancing personalized event tracking by 40%
- Deployed EmailJS for streamlined sharing, raising event-sharing utilization by 30%

Forkify Recipe Application | *JavaScript, Forkify API*

Apr 2024 – Aug 2024

- Designed and executed a dynamic recipe search app integrating Forkify API, boosting search efficiency by 40% and user engagement through personalized favorites
- Completed an advanced web development course, reducing code complexity by 30% and improving maintainability
- Utilized modern techniques such as async/await and ES6 modules, facilitating a 25% faster load time and a more modular, scalable codebase for enhanced application performance
